Acknowledgement of Assistance

All manuscripts utilizing data made available through the Consortium should acknowledge that fact as well as identify the original collector of the data. The ICPSR Council urges all users of the ICPSR Data facilities to follow some adaptation of this statement with the parentheses indicating items to be filled in appropriately or deleted by the individual user.

The data (and tabulations) utilized in this (publication) were made available (in part) by the Inter-university Consortium for Political and Social Research. The data for CONSUMER EXPENDITURE SURVEY, 1960-1961 were originally collected by U.S. Dept. of Labor, Bureau of Labor Statistics. Neither the collector of the original data nor the Consortium bear any responsibility for the analyses or interpretations presented here.

In order to provide funding agencies with essential information about the use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, each user of the ICPSR data facilities is expected to send two copies of each completed manuscript or thesis abstract to the Consortium. Please indicate in the cover letter which data were used.

U.S. Dept. of Labor. Bureau of Labor Statistics;
CONSUMER EXPENDITURE SURVEY, 1960-1961 (ICPSR 9035)

This dataset is one in a long series of surveys which were begun in 1888 and continue to the present. It includes detailed information on the purchasing habits of Americans, with over 200 types of expenditures coded, and attempts to provide a complete picture of consumer expenditures in the United States. Interviews were conducted in 1960 and 1961 with 9,476 urban families, 2,285 rural non-farm families, and 1,967 rural farm families, for a total of 13,728 families interviewed. (A small number of the interviews were conducted in 1959.)

ICPSR obtained the 1960-1961 Consumer Expenditure Survey from the Bureau of Labor Statistics in two files, one containing the urban families and a second file containing the rural families interviewed. The data records in each of the files were recorded in zoned-decimal format, with two records of 911 columns each per case. ICPSR processing consisted of transforming the data from zoned-decimal to character mode, altering the file from two records of 911 columns per case to a single record of 1748 characters per case (deleting blank and duplicate fields in the process), and combining the urban and rural interview records into a single file.

The collection is available as a single file which contains 13,728 cases. The data records are each 1,748 characters in length and the dataset contains approximately 212 variables. Class III

Although the data on receipts and disbursements predominantly are positive values, the data on miscellaneous expenditures, changes in assets and liabilities, account balancing difference, receipts and personal taxes include some negative values which are recorded on tape with a negative sign. This may occur in the following situations on Record 2:

Locations

1233-1242	If the consumer unit had large refunds, not covered elsewhere, greater than their miscellaneous personal consumption expenditures.
1363-1372	If the net change in assets and liabilities represents a dissaving.
1373-1462	If the consumer unit had a net decrease in assets of the type specified.
1463-1542	If the consumer unit had a net increase in liabilities of the type specified.
1543-1552	If reported total disbursements are greater than reported total receipts (account balancing difference).
1553-1672 1683-1692	If the consumer unit had a net loss instead of gain in receipts of the type specified.
1673-1682	If the payment for personal taxes was greater than tax refunds received. (Net payments for personal taxes are shown as negative values because for many tabulations they are used as deductions from income to get income after taxes.)

DESCRIPTION OF DATA RECORDS

<u>LOCATIONS</u>	<u>DATA ITEM NAME</u>	<u>Characteristics Classification Code No. 1/</u>
1	Location and size of place	24
2	Urbanization group	48
3	Area classification	49

NET INCREASES IN ASSETS — PLUS

1463-1472 Net change in liabilities*
 1473-1482 Mortgage on own dwelling*
 1483-1492 Mortgage on other real property*
 1493-1502 Money owed to banks, insurance companies, etc.*
 Money owed on purchase of:
 1503-1512 Automobile *
 1513-1522 Housefurnishings and equipment *
 1523-1532 Other goods and services*
 1533-1542 Money owed on rent, taxes, and other liabilities *

NET INCREASES IN LIABILITIES — MINUS
NET DECREASES IN LIABILITIES — PLUS

1543-1552 Account balancing difference 3/ *

3/ The Account balancing difference is the difference between reported total receipts and reported total disbursements. Total receipts consist of income after taxes, other money receipts, and moneys or credit received from decreasing assets or increasing liabilities. Total disbursements consist of expenditures for current consumption, personal insurance, gifts and contributions, and outlays of money that resulted in increasing assets or decreasing liabilities. If reported receipts are less than disbursements (including savings or dissavings), the balancing difference is negative (-).

* MAY BE NEGATIVE VALUE. SEE PAGE 4.

Washington 25, D.C.

A SHORT DESCRIPTION OF THE SURVEY OF CONSUMER EXPENDITURES IN 1960-61

Purpose and Scope of the Survey

The information in this report was collected by the Bureau of Labor Statistics (BLS) as part of its nationwide Survey of Consumer Expenditures (CSE) in urban places. The primary objective of this multipurpose survey was to obtain detailed expenditure data for use in revising the Consumer Price Index (CPI). The present tabulations, covering both the index and nonindex population in the survey area, are designed to provide data serving other important survey objectives, such as analysis of expenditure patterns for purposes of economic policy and marketing and academic research. The Survey was conducted in 2 years--in 1961, covering family expenditures and income in the calendar year 1960, and in 1962, providing data for 1961.

A three-stage sample design was used to select a sample representing all families in the urban population.

The first stage was the selection of the cities to be surveyed. The sample of cities for the entire urban United States was developed by sampling Standard Metropolitan Statistical Areas (SMSA) and individual urban places in nonmetropolitan areas. ^{1/} A sample of 66 urban places was selected to represent all urban places in the 50 States; all of the 12 largest SMSA's were included in the sample. (The New York area was divided into two subareas.) A list of the cities in the sample and the sample size (i.e., the number of assignment addresses in the master sample) for each year is available upon request.

Since the consumer expenditure surveys were conducted in 2 years, it was necessary to divide the city sample into two balanced subsamples, each representative of the U. S. urban population. In the 12 largest SMSA's, data were collected from one-half the sample in each year.

At the second stage, a sample of living quarter addresses was obtained in each city from the Comprehensive Housing Unit Survey (CHUS) conducted by BLS, or from listings recorded in the 1960 Census of Population and Housing. The BLS housing unit surveys, conducted in cities with populations of 50,000 or more in 1960 and in places with populations of 2,500 or more in 1961, were based on area block samples designed to represent all noninstitutional living quarters (including hotels and rooming houses) in the urban area. The 1960 sample for cities of less than 50,000 population was selected from Census listings of living quarter addresses, arranged by enumeration districts.

In the final stage, the addresses for the Survey of Consumer Expenditures were selected as a subsample of the addresses for each city obtained from the CHUS or the Census. From both the BLS and Census arrays of addresses, an alternate sample was selected by picking the address following each address selected in the master sample. These alternate addresses were substituted if the "master" address could not be located or the unit was vacant, if no one was at home after at least two visits, or if the occupant refused or was unable to give the minimum information required for classifying the family. The procedures yielded a sample of approximately 12,000 living quarter addresses in 66 urban places.

All members of consumer units residing at a sample address were eligible for inclusion in the survey except for the time in the survey year during which they were living in military camps, posts, or reservations (other than periods of 45 days or less in a reserve or National Guard unit), in institutions; in rural communities; ^{2/} abroad (except on vacation, etc.); or were members of another consumer unit. The tabulations in this report, however, cover only full-year consumer units, i.e., units with at least one member who was eligible for the entire survey year. If more than one consumer unit was living at an address, each unit was included in the sample.

Collection and Processing of the Data

All data were collected by personal interviews. Interviews for the 1960 and 1961 CSE were conducted in the spring and summer of 1961 and 1962, respectively. The detailed questionnaires used by the BLS agents in interviewing the families were developed out of the long experience of the BLS in this type of survey and had been pretested in three cities--Cincinnati, Ohio, and Fairbanks and Anchorage, Alaska--in 1959. The reporting forms were designed with numerous probes and other aids to recall, and families were encouraged to refer to records wherever possible.

^{1/} The selection of the city sample is described in "Technical Note--The Revised City Sample for the Consumer Price Index," *Monthly Labor Review*, October 1960, pp. 1078-1083. (BLS Reprint 2352.)

In cooperation with the U. S. Department of Agriculture, the survey conducted in 1962 was extended to rural areas. All 1960 data are for urban families only.

^{2/} This requirement was dropped for the 1961 survey which was extended to rural areas.

Reported receipts and disbursements were summarized and reviewed in the field to determine the completeness, consistency, and balance of the family account. Families were reinterviewed when necessary to clarify ambiguous entries and complete the record. Prior to editing and coding the schedules for machine tabulation, the schedules were reviewed in the Washington office primarily to determine conformance of the entries to the survey concepts and methodology. This review was concentrated on sections of the schedule which had proved most difficult in previous survey experience, and on unusual situations which required specialized instructions. Completeness and reasonableness of the reported account, rather than the degree to which receipts and disbursements balanced, were primary criteria for determining the acceptability of a schedule.

All data were edited, coded, and transferred to punch cards for tabulating with electronic data processing equipment. Numerous checks for internal consistency, reasonableness, and accuracy of the data were written into the programs for screening the machine listings of the data prior to tabulation.

Evaluation of the Data

Data obtained from a sample survey as complex as the Survey of Consumer Expenditures are subject to many types of errors. These include sampling, recording, and processing errors, and errors due to the refusal or inability of some families to give the information requested.

All data have been reviewed, edited, and screened to minimize processing errors. Chance variations due to sampling can be measured statistically and the BLS is planning to estimate the sampling error for selected items and groups of items. Approximately 75 percent of the families in the 1960 sample furnished usable schedules and some of the nonrespondents supplied limited information on family characteristics which will be used to evaluate the nature of the sample losses due to nonresponse. Among the participating families, inaccurate reporting is a source of error despite continued research in schedule design and intensive training of the interviewers. Such inaccuracies result from memory errors, misunderstanding of a question or reluctance to answer it, and incorrect entries by the interviewer. Although the BLS has accumulated substantial knowledge about such reporting errors and will continue research in this field, these errors cannot be quantified satisfactorily.

In using the CES data for analytical purposes and for comparison with related data from other sources, the basic orientation of the survey and the limitations this imposes on other uses of the results must be recognized. The survey was designed to obtain the most accurate information possible about family expenditures and spending patterns in detail, including the quantity and price of some purchases. Information on family income was needed for interpreting the expenditure pattern. To complete the account of the family's financial experience, information was requested on the net change in assets and liabilities.

If a family's 12-month account were complete and error-free, receipts would equal disbursements. Such precision is rarely achieved. If a schedule met the test of the editing instructions with respect to internal completeness and consistency of expenditures with each other and with the family's reported manner of living, the record was used even though reported expenditures plus savings did not equal income. The amount of the "account balancing difference" was recorded on the schedule and the average amount per family in the sample is shown in the tabulations. Schedules were not automatically rejected from the tabulations because of high balancing differences.

To summarize, the account balancing difference is a measure of net reporting discrepancy. From the nature of the survey, it is not possible to say how much of the difference arises from inaccuracy in reporting expenditures, income, or changes in the family's savings or debt position. The primary emphasis throughout the survey was on a complete and reasonable record of expenditures and, if these conditions appeared to be satisfied, the standards for completeness of the savings and income record were less rigorous.

Guides to Interpreting Statistical Summaries

The averages and percentages in the accompanying tables are based on all families included in each class, whether or not they reported receipts or disbursements for a particular item. Averages were calculated by dividing the aggregate amount of income, expenditures, or savings by the total number of families in the class. Since all averages for a class are based on a common divisor, they are additive. 3/

In releasing data for individual cities in the same detail which will be shown in the regional and national tabulations, the procedure that was initiated in the Bureau's 1950 survey has been followed. Namely, averages are shown for all classes of families for which any observations are available, even though only one reporting family happened to fall in a class. The city tabulations are the integral parts of the electronic data processing program which prints in complete detail all information which is to be cumulated into the regional and United States totals. The number of families included in each class is shown in every tabulation, and it is assumed that the

3/ Because of rounding, sums of individual items may not equal totals. In all tables, the total for housing may include small expenditures on other properties which are not shown separately (see definitions).

analyst will recognize the limitations of the averages computed for small numbers of families. An advantage of this procedure is that the inclusion of all observations in the tabulations allows the analyst to regroup the data for his particular needs without loss of information and thus make maximum use of the data.

Particular care is required in using the averages for families at the extremes of the income scale. These averages are based on small numbers of families which may differ sharply in their spending patterns. For example, the lower income classes include predominantly elderly persons, but they may also include an occasional student (with high education expenses) or a family which reported losses from a business which they operated or from rental property. Occasional apparent inconsistencies in the averages of income before and after taxes for small groups of families may be explained by the fact that income received and tax payments and tax refunds are not reported within the same calendar year.

Definitions

Family. The family, or consumer unit, refers (1) to a group of people usually living together who pooled their income and drew from a common fund for their major items of expense, or (2) to a person living alone or in a household with others but who was financially independent, i.e., his income and expenditures were not pooled. Never-married children living with parents were always considered as members of the consumer unit. Information was recorded for the family as it existed in the survey year.

Family Size. The number of equivalent, full-year members, based on the total number of weeks during which both full-year and part-year members belonged to the family in the survey year, divided by 52 weeks.

Family Head. In husband-wife families, the husband was considered the head. In other types of families, the person recognized as the head by other family members was so designated.

Education of Head. Years of school completed during or before the survey year, in elementary or high school, college, university, or professional school. Persons not reporting the number of years completed were included in the class, "8 years or less."

Full-time Earners. A count of family members who were employed 48 weeks or more in the survey year, and for 35 hours or more per week in wage and salary occupations. The minimum hours requirement did not apply to self-employed workers in an unincorporated business or profession.

Occupation of Family Head. The major occupation at which employed for the largest number of weeks in the survey year. The classification was made in accordance with the 1960 Census of Population, Alphabetical Index of Occupations and Industries, except that the self-employed (including businessmen, professionals, and artisans) were separated from salaried managers, officials, and professional workers. Members of the Armed Forces, living off base, and therefore eligible for the survey, were classified separately, but the small number of farmers and farm workers living in urban places were not classified separately. The retired included heads who were wholly retired and some with nominal earnings which were less than their retirement income.

Tenure. The tenure of the family at its principal place of residence during the entire survey year. Families who were owners part of the year and renters part of the year were classified as "other." Owner-occupants of cooperative apartments were classified as owners. Families who received rent free were included with renters.

Money Income before Taxes. Total money income during the survey year of all family members from wages and salaries (including tips and bonuses) after deductions for such occupational expenses as tools, special required equipment, and union dues; net income from self-employment; and income other than earnings such as net rents, interests, dividends, Social Security benefits, pensions, disability insurance, trust funds, small gifts of cash, regular contributions for support, public assistance, or other governmental payments. The value of two nonmoney items--food and housing received as pay--were counted as money income and as expenditures.

Money Income after Taxes. Money income after deduction of personal taxes (Federal, State, and local income taxes, poll taxes, and personal property taxes).

Other Money Receipts. Inheritances and occasional large gifts of money less taxes, legal fees, and other expenses required to obtain such receipts; and net receipts from the lump-sum settlement of fire and accident insurance policies. Gifts and inheritances in the form of real estate, securities, and other property were not included unless they had been sold during the survey year.

Increases in Assets. Increases in cash holdings, business investments, and money owed to the family; purchase and improvement of dwellings and other real property; purchases of stocks and bonds; and increases in other assets.

Decreases in Assets. Decreases in cash holdings, business investments, and money owed to the family; sale of owner-occupied dwellings, other real property, and personal property; sale or retirement of stocks and bonds; settlement or surrender of personal insurance policies; and decreases in other assets.

Decreases and Increases in Liabilities. Changes in the mortgage debt on owner-occupied dwellings and other real property; money owed to banks, insurance companies, etc.; money owed for rent, taxes, automobiles, housefurnishings and equipment, and other goods and services; and changes in other liabilities.

Net Change in Assets and Liabilities. The algebraic sum of increases and decreases in assets and liabilities. Net increases in assets or decreases in liabilities represent a net saving during the year. Net decreases in assets or increases in liabilities represent a deficit (-) or net dissaving.

Account Balancing Difference. The difference between reported total receipts and reported total disbursements. Total receipts consist of income after taxes; other money receipts, and moneys or credit received from decreasing assets or increasing liabilities. Total disbursements consist of expenditures for current consumption, personal insurance, gifts and contributions, and outlays of money that resulted in increasing assets or decreasing liabilities.

Gifts and Contributions. Cash contributions to persons outside the family and to welfare, religious, educational, and other organizations; and the cost of goods and services purchased in the survey year and given to persons outside the family.

Personal Insurance. Payments or deductions from pay for life, endowment, and annuity insurance; fraternal, union, and other mutual aid insurance; Social Security; and railroad, government, and other retirement plans. Employer's contributions are not included.

Expenditures for Current Consumption (or Current Living Expenses). The cost of goods and services for family living (including financing charges and sales and excise taxes) bought during the survey year, whether or not payments were completed during the year. Consumer durable goods such as automobiles and household equipment were considered as consumption items, but purchases and sales of homes were considered as changes in assets. Family expenditures for items used partially for business, such as the home or car, were adjusted to exclude the amount chargeable to business use.

Housing, Total. Includes expenses on real estate not used for family business and not occupied or rented, which are not listed separately in the accompanying tables.

Owned Dwelling. Taxes, insurance, interest, repairs, and other current operation expenditures of homeowners for principal residence and vacation home. Excludes payments on mortgage principal and for home improvements, which are counted as changes in assets and liabilities.

Other Shelter. Rented vacation homes and other lodging while away from home at school, work, or traveling.

Recreation. Purchase and repair of televisions, radios, phonographs, musical instruments, and related items; spectator admissions to movies, sports events, concerts, etc.; dues, fees, and equipment for participant sports; club memberships; hobbies; pets; and toys and play equipment. Vacation and other recreational travel expenses are included in automobile and other transportation, food, and lodging away from home.

Automobile Transportation. Purchase and operation of automobiles. Purchase is net of trade-in allowances (or sale) and discounts, but includes financing charges.

Other Expenditures. Interest on personal loans, funeral expenses, legal expenses, bank service charges, money lost or stolen, allowances to children, all-expense tours, and similar expenses that cannot be allocated elsewhere.

Value of Items Received without Expense. The estimated money value of goods and services received as gifts, in exchange for trading stamps, or from public or private welfare agencies, and of all goods and services received as pay except food and rent. Includes employer's contributions to health insurance plans.

JULY 1963

Definitions and Explanations

Family. The family, or consumer unit, refers (1) to a group of people usually living together who pooled their income and drew from a common fund for their major items of expense, or (2) to a person living alone or in a household with others but who was financially independent, i.e., his income and expenditures were not pooled. Never-married children living with parents were always considered as members of the consumer unit. Information was recorded for the family as it existed in the survey year.

Family Size. The number of equivalent full-year members, computed by dividing the total number of weeks during which both full-year and part-year members belonged to the family in the survey year by 52 weeks.

Full-Time Earners. A count of family members who were employed 48 weeks or more in the survey year, and for 35 hours or more per week in wage and salary occupations. Members employed in industries where customary full-time employment is less than 48 weeks or 35 hours per week (e.g., school systems or airlines) were counted as full-time earners. The minimum hours requirement did not apply to self-employed workers in an unincorporated business or profession.

Family Head. In husband-wife families, the husband was considered the head. In other types of families, the person recognized as the head by other family members was so designated.

Education of Family Head. Years of school completed during or before the survey year in an elementary or high school or a college, university, or professional school. Eight years or less corresponds to years or grades completed in an elementary school; 9-12 years, to the completion of 1 to 4 years of high school; 13-16 years, to the completion of 1 to 4 years of college; and over 16 years, to postgraduate work after college. All persons in the latter class were recorded as having completed 17 years of school. Persons who did not give any information on the extent of their education were included in the class "8 years or less."

Nonwhite. Negroes, Indians, Japanese, Chinese, and members of other nonwhite races.

Account Balancing Difference. The difference between reported total receipts and reported total disbursements. Total receipts consist of income after taxes, other money receipts, and moneys or credit received from decreasing assets or increasing liabilities. Total disbursements consist of expenditures for current consumption, personal insurance, gifts and contributions, and outlays of money that resulted in increasing assets or decreasing liabilities. In the accompanying tables, the balancing difference is obtained by subtracting the sum of consumer expenditures, personal insurance, gifts and contributions, and the net change in assets and liabilities from the sum of money income after taxes and other money receipts. If reported receipts are less than disbursements (including savings or dissavings), the balancing difference is negative (-).

Home City. Families were asked to report certain expenditures according to whether they were incurred by family members in the home city (i.e., their principal place of residence) or while they were away from their home city to attend school, to work, or on business or pleasure trips. For cities with a population of 50,000 or more, the home city referred to the entire urban part of the Standard Metropolitan Statistical Area; for urban places with populations of 2,500 to 50,000 outside SMSA's, the home city was the area inside the corporate limits. Expenditures out of the home city are shown separately for the following items: Food, lodging, public transportation, and recreation.

Expenditures for Current Consumption (or Current Living Expenses).

The cost of goods and services for family living (including financing charges and sales and excise taxes but net of trade-in allowances or refunds) bought during the survey year, whether or not payments were completed during the year. Consumer durable goods such as automobiles and household equipment were considered as consumption items, but purchases and sales of homes were considered as changes in assets. Family expenditures for items used partially for business, such as the home or car, were adjusted to exclude the amount chargeable to business use. The value of food and housing received as pay and the retail value of goods and services withdrawn from a family owned business were included as expenditures, with corresponding balancing entries as income. (See Meals as Pay, p. 157, and Self-Employment Income, p. 162.)

Food, Alcoholic Beverages, and Tobacco

Food Prepared at Home. All food purchased to be served at home or carried from home in lunches, except the estimated cost of food served to boarders. (See also Income from Roomers and Boarders, p. 162.)

Meals as Pay. Employee's estimate of the value of meals received as pay. Meals and rent as pay (see Rent for Dwelling) refer to food and housing which the employer agrees to provide as a supplement to cash wage and salary payments, e.g., meals for waitresses, room and board for nurses, housing for ministers or apartment managers. (See also Money Income before Taxes--Wages and Salaries, p. 162.)

Alcoholic Beverages. Beer, ale, liquors, and wine served at home or consumed in restaurants, bars, and other eating and drinking places. Some expenditures for alcoholic beverages that could not be identified separately are included with Food away from Home.

Tobacco. Cigarettes, cigars, pipe tobacco, pipes, lighters, and all other smokers' supplies.

Housing (Shelter, Fuel, Household Operations, Housefurnishings)

Rented Dwelling

Rent for Dwelling. The net family expense for contract rent (i.e., the rent agreed upon regardless of any furnishings, utilities or services that may be included) after adjustment for any use of the dwelling for business or for receipts from subletting the entire dwelling. Includes the value of rent as pay. (See Meals as Pay. See also Money Income before Taxes, Income from Roomers and Boarders, and Income from Rents, p. 162.)

Repairs on Rented Dwelling. Expenses which were not reimbursed by the landlord.

Special Fees, etc. Bonuses and commissions paid to realtors, agents or other person to obtain possession of a rental dwelling.

Owned Dwelling or Vacation Home

Property Insurance. Includes premiums paid during the survey year on policies for fire and extended coverage of a dwelling and its contents or on comprehensive (homeowners') policies. The latter, in addition to insuring the dwelling and its contents, provide personal liability protection for the homeowner and his family, both at home and away from home. Amounts paid in premium covering more than the survey year were not prorated.

Repairs and Replacements. Amounts spent for labor and materials for all types of repairs and maintenance. Costs of improvements (such as added rooms, garages, centrally installed air conditioning, etc.), which are considered as increases in assets, were not included. (See Net Change in Assets, p. 164.)

Other Expenses. Settlement and commission costs paid at time of the purchase or sale of principal residence or vacation home, penalties to pay off a mortgage early, ground rent, and other expenses such as F.H.A. mortgage guarantee insurance. Does not include mortgage refinancing charges, which are included with Interest on Mortgages.

Lodging out of Home City. Rented vacation homes and other lodging for family members while away from home at school, work, or traveling. Includes expenses for room and board combined, which could not be allocated between food and lodging out of home city.

Other Real Estate. Taxes and other expenses on property owned but not used for family business and not occupied or rented, e.g., a vacant lot.

Fuel, Light, Refrigeration, and Water. Excludes expenses which were covered by contract rent or by taxes on owner-occupied homes. Wherever possible, expenses for gas, electricity, water, sewage disposal, and garbage collection were reported separately, but in some cities only combined bills could be reported because of the way in which bills were rendered for these services.

Gas. Delivered in mains, by tank truck, or in containers.

Sewage Disposal. Includes charges for cleaning septic tanks.

Food Freezer Rentals. Rent and service charges for lockers for frozen food.

Household Operations

Laundry Supplies. Soaps, detergents, bleaches, starch, etc.

Cleaning Supplies. Cleansers, polishes, waxes, scouring pads, etc., for housecleaning.

Household Paper Supplies. Napkins, towels, wax paper, foil, cups and plates, lunch bags, toilet tissue, etc.

Laundry and Cleaning Sent Out. Includes all laundry sent out (clothing and household linens); cleaning of rugs, draperies, etc.; coin-operated laundry and cleaning machines; and diaper service. Excludes cleaning of clothing, which is included under Clothing Upkeep, page 159.

Domestic Service. Includes wages, social security payments, transportation, gifts, and tips for maids and other household help, gardeners, babysitters, apartment house janitors, etc. Excludes expenses for nursing care at home, which are included under Medical Care, page 160.

Day Nursery Care. Fees for child care at day nurseries; excludes kindergarten fees, which are included with tuition and fees under Education, page 161.

Repairs of Furniture and Equipment. Includes repairing and reupholstering of furniture; and repairing and servicing of appliances and equipment except radios, television sets, or musical instruments, which are included under Recreation, page 160.

Moving, Freight, Express, and Storage. Does not include storage of furs and other apparel, which appears under Clothing Upkeep, page 159.

Other Expenses. Holiday decorations, matches, candles, etc.; fresh flowers for the house; and flower and lawn seed, fertilizer, sprays, etc.

Housefurnishings and Equipment

Household Textiles. Expenses for all items listed separately are for readymade or custom-made articles. If materials for slipcovers, draperies, etc., were bought separately to be made either by a family member or by someone for pay, the expenses for the materials and labor were included under Materials and Services.

Other Readymade Items. Shower curtains, bathmats, washcloths, dishcloths, pot holders, dresser scarves, mattress pads, ironing board covers, pads and rubber sheeting for the nursery, etc.

Furniture

Bedroom. Includes standard bedroom furnishings, and nursery cribs, mattresses, and chests.

Other. Includes highchairs, playpens, bathinettes, and other nursery furniture; filing cabinets and furniture not classified elsewhere.

Floor Coverings. Soft surface includes rugs and carpets with nap of wool, cotton, other natural or manmade fibers. Hard surface includes coverings of linoleum, plastic, asphalt tile, etc.

Small Appliances. Hotplates, heaters, and electrical equipment such as toasters, frying pans, coffeemakers, mixers, irons, and fans.

Housewares. China, glassware, and flatware for serving food; nonelectric cooking utensils (pots, pans) and kitchenware (bowls, spatulas, etc.) for food preparation and storage; bottles, sterilizers, etc. for the nursery; nonelectric cleaning equipment (brooms, mops, carpet sweepers, pails, etc.); and nonelectric laundry equipment (clotheslines, baskets, tubs, etc.).

Miscellaneous Items

Insurance on Furnishings, Equipment, and Apparel. Premiums paid during the survey year for insurance on personal property not covered by a policy on the dwelling. (See Property Insurance, p. 157.)

Other. Includes lamps and light bulbs, clocks, pictures, fireplace equipment, window shades, typewriters, baby carriages, luggage, lawn mowers and other hand and power tools, other housewares not classified elsewhere, and rental of furnishings and equipment.

Clothing, Clothing Materials and Services

Clothing, Men and Boys (16 Years of Age and Over)

Other Outerwear. Includes shorts (walking, Bermuda, etc.), clothing for participation in sports (bathing trunks, baseball suits, etc.), and uniforms and protective work clothing.

Other Footwear. Houseslippers, rubbers, galoshes, and boots.

Clothing, Boys (2 through 15 Years of Age)

Play Clothes. Dungarees, overalls, shorts; clothing for participation in sports (bathing trunks, gym suits, baseball suits, etc.); cowboy suits; and uniforms (school, Boy Scout, band, etc.).

Shoes. Includes dress, school, or playshoes with leather or canvas uppers.

Other Footwear. Houseslippers, rubbers, galoshes, and boots.

Clothing, Women and Girls (16 Years of Age and Over)

Other Outerwear. Includes bathing suits and other clothing for participation in sports; uniforms and protective work clothing, and matched sets (e.g., skirts, shorts, or slacks with matching blouses or sweaters).

Other Footwear. Houseslippers, ballet slippers, rubbers, galoshes, and boots.

Clothing Expenditures Not Allocated. Clothing expenses for individual family members which were reported as a lump sum and could not be distributed among different types of clothing.

Clothing Upkeep. Dry cleaning and pressing of wearing apparel only. (See Laundry and Cleaning Sent Out, under Household Operations, p. 158.) Other Clothing Services include hat cleaning and blocking, dyeing, dressmaking and tailoring services (except at the time of purchase of ready-made or custom-made clothing), garment storage, clothing rental, and watch and jewelry repair.

Transportation

Automobile Purchase is net of trade-in allowance (or sale) and discount; it includes the purchase price of the automobile, extra equipment and accessories bought when the automobile was purchased, and all financing charges.

Automobile Operation

Registration and Other Expenses. Includes State, city, and county registration fees and taxes; driver's licenses; toll charges, parking and garage rent; fines for traffic violations; auto club membership; etc.

Public Transportation. In home city, includes streetcar, bus, subway, and taxicab fares and tips; out of home city, includes fares on trains, intercity buses, planes, and ships, as well as local transportation when away from the home city.

Car Pool. Payments made for shared rides in privately operated cars.

Other Transportation. Purchase, operation, and rental of bicycles, motorcycles or scooters, boats, and airplanes. Also includes expenses for a borrowed or rented car or utility trailer.

Medical Care

Prepaid Care. Includes payments (or deductions from pay) for all types of health insurance or plans providing prepaid medical or dental care; employer's contributions are not included. Coverage may provide broad protection against expenses for hospital, surgical, and nonsurgical care; or may be limited to protection for specified hazards, such as police or school accidents. Does not include premiums for disability insurance, i.e., protection against loss of income because of illness or injury, except where such coverage is part of a policy which is primarily to provide health insurance. (See Personal Insurance, p. 161.)

Direct Expenses. Medical expenses which were not covered by health insurance or other prepaid plans, or any portion of such expenses that were not met by insurance.

For Hospitalized Illness. Includes all expenses for the patient during his stay in a hospital. In addition to regular hospital charges, includes fees for physicians, surgeons, or special nurses, and charges for X-rays, laboratory tests, medications, etc.

Other Practitioners. Include chiropractors, chiropodists, podiatrists, faith healers, midwives, etc.

Drugs and Medicines. Drugs, medicines, and vitamins purchased with or without a prescription.

Other Medical Care. Services of nurses at the patient's home, care in a nursing home or sanitarium, laboratory tests, X-rays (excluding dental and eye which are under those categories), therapeutic treatments, and other outpatient services at clinics and hospitals.

Personal Care

Other Personal Care Services. Manicures, massages, slenderizing treatments, etc.

Recreation

Television, Radio, Phonographs, and Musical Instruments. All expenses incident to the purchase, maintenance, rental, and use (e.g., purchase of records, recording tapes, sheet music, music racks, and TV leased line or cable service) of televisions, etc.

Participant Sports (Fees, Dues, and Equipment). Cost of sporting goods equipment (e.g., baseballs, golf clubs, etc.), but not of clothing or shoes for participation in sports, which are included under Clothing.

Club Dues and Memberships. Dues for social, fraternal, civic, and service clubs.

Hobbies. Expenses incurred primarily in pursuit of a hobby (cameras and photographic equipment, stamps and other collections, craft materials, instruction, publications, etc.)

Recreation out of Home City. Includes admissions to movies, theatres, etc.; expenses for participant sports such as hunting and fishing; and similar recreation outside of the home city. Other out-of-town expenses for vacation and recreation are included under Automobile and Other Transportation, Food, Lodging, etc. All-expense tours are included under Miscellaneous, below.

Other Recreation. Admissions to dances, purchase of camping equipment, and gambling losses. Winnings from gambling are included under Other Money Income, page 163.

Education

Tuition and Fees. For colleges and professional schools and other school levels such as day or boarding schools, business or secretarial schools, technical and trade schools, schools for handicapped, retarded, etc. Fees for child care centers and day nurseries are included under Household Operations, page 158.

Music and Other Special Lessons. Instruction in music, dancing, swimming and other sports, driving, etc.

Miscellaneous

All-Expense Tours, etc. Expenses for tours, summer camps, etc., out of the home city, which were reported as a lump sum covering transportation, food, lodging, admissions, etc.

Other. Includes interest on loans other than mortgages and business loans; bank service charges; legal expenses; fines (except for traffic violations which are included under Transportation p. 160) and court judgments; marriage license and related fees to ministers and organists; funeral expenses; expenses for raising food for family use; money lost or stolen; money allowances to children; and other expenses that cannot be allocated elsewhere less any refunds not assigned to a specific item.

Personal Insurance. Direct payments, or deductions from pay, for life, endowment, and annuity insurance; fraternal, union, and other mutual aid insurance; social security; and railroad, government, and private retirement and pension plans. Employer's contributions are not included.

Life Endowment, Annuity, etc. Premiums paid plus insurance dividends applied to premiums. (See Dividends, p. 162.) Mortgage (life) insurance is also included. All insurance dividends are considered as income, and amounts not applied to premiums but left on deposit are classified as increases in assets.

Veterans. Life insurance issued by the U.S. Government to persons with military service.

Group (Deducted from Pay). Life insurance only; deductions for group plans for prepaid medical care are classified under Medical Care, page 160.

Mutual Aid. Reciprocal agreement whereby members of certain fraternal and other organizations agree to pay a nominal assessment upon the death of each participating member, thereby obtaining coverage for themselves.

Disability Income. Premiums for protection against loss of income because of disability (when not part of a general health policy, which is classified under Medical Care, p. 160). Such insurance provides specified periodic income in the event of illness or accident.

Gifts and Contributions

Cash. All money given to persons not in the family, including alimony and other cash contributions for support of persons living outside the consumer unit, and gifts of stocks and bonds.

Goods and Services. All types of goods and services (e.g., Christmas or wedding gifts, funeral expenses, etc.) purchased for persons outside the consumer unit.

Money Income before Taxes. Total money income during the survey year of all family members from sources listed below, but excluding Other Money Receipts. (See p. 163.)

Wage and Salaries. All money earnings as an employee in the form of wages, salaries, tips, bonuses, commissions, and pay for military personnel on active or reserve duty, before deductions were made for taxes, savings bonds, social security, retirement plans, group life or health insurance plans, etc. Money earnings were adjusted to include the value of two nonmoney items--food and housing received as pay--and to exclude occupational expenses.

Occupational Expenses. Union dues and assessments; dues to business and professional associations; licenses, tools, supplies, and special equipment other than clothing required for the job; and expenses for travel or use of the family's automobile on the job. All occupational expenses represent the net cost to the family after deduction of the amounts reimbursed by the employer; reimbursements in excess of actual expenses are considered as additions to income from wages and salaries.

Self-Employment Income. Net income (gross receipts minus expenses) from a profession or unincorporated business (including a farm), which was operated by the family during the survey year. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. Net income includes the value of goods and services withdrawn from the business for family use; the retail value of such items was also recorded as family expenditures.

Income from Roomers and Boarders. Refers to net income received by families having four or fewer roomers and boarders. Income from five or more roomers and boarders is classified as Self-Employment Income. Includes money received for the care of foster children. In calculating net income, only the value of food allocated to boarders was deducted from gross receipts.

Income from Rents. Refers to the net income received by families having four or less rental properties (houses, apartments, stores, etc.). Income from five or more rental properties is classified as Self-Employment Income. Net income was calculated by deducting expenses for property taxes, insurance, mortgage interest, repairs and maintenance, utilities, and furnishings from gross receipts.

Profits from Stocks and Bonds. The difference between the purchase price (including broker's fees) and the selling price (after deduction of broker's fees) of stocks and bonds which were bought and sold during the survey year. (See also Net Change in Assets, p. 164.)

Profits from Businesses Owned but not Operated. Return on investment in an unincorporated business or farm.

Interest. Includes interest received (or credited to account) from bonds, savings accounts (in banks, credit unions, savings and loan associations), notes, mortgages, etc. Excludes interest accrued but not paid in the survey year on bonds, such as series E U.S. savings bonds which were not cashed; but includes interest (i.e., the difference between the amount received and the purchase price) from series E bonds which were cashed during the survey year.

Dividends. Cash dividends from stocks, cooperatives, and insurance policies (except veterans' insurance), dividends from stocks or mutual funds which were applied toward the purchase of additional shares; and dividends from insurance policies which were left on deposit or applied to premiums.

Public Unemployment and Social Security Benefits. Amounts received from social security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration; railroad retirement and civil service retirement benefits (including payments by Federal, State, and local governments); unemployment benefits paid by government agencies, employers, labor unions, or other organizations; and periodic workmen's compensation payments received by persons injured on the job.

Private Pensions and Retirement. Benefits paid by a former employer or a labor union.

Private Insurance Annuities and Trust Funds. Regular periodic payments from annuities, estates, trust funds or insurance. (See Other Money Receipts, below.)

Public Social Assistance and Private Relief. Cash payments (or vouchers for the purchase of food at retail) through public programs such as old-age assistance, aid to dependent children, aid to the blind, or through private welfare agencies such as church or community chest organizations. (See also Value of Items Received Without Expense, p. 164.)

Gifts of Cash. Amounts received from persons outside the consumer unit for such occasions as birthdays, graduations, Christmas, wedding anniversaries, etc. Such gifts do not include regular contributions for support, inheritances, or occasional large gifts of money. (See Other Money Income and Other Money Receipts, below.)

Military Allotments, Pensions, etc. All money receipts based on military service other than pay received while on active or reserve duty. Include mustering-out pay; reenlistment and State bonuses; war insurance refunds; dividends on veterans' insurance whether paid to the family or applied to premiums; retirement, survivor, and service-connected disability pay; educational benefits and other allowances; dependency allotments (excluding deduction from family member's pay); and quarters and subsistence allowances for housing, cost of living, separate rations, and clothing.

Other Money Income. Contributions for support (alimony, etc.), royalties, payments from disability insurance, excess of payments by health insurance over medical expenses, income from the sale of home-grown food, receipts from riders in car pool, and all other income not included elsewhere.

Money Income after Taxes. Money income from all sources after the deduction of personal taxes.

Other Money Receipts. Inheritances and occasional large gifts of money less taxes, legal fees, and other expenses required to obtain such receipts; and net receipts from the lump-sum settlement of fire and accident insurance policies or as the beneficiary of policies on the lives of persons outside the consumer unit. These amounts were recorded as other money receipts in order to differentiate "windfall" receipts from regular income, and were not included with money income for family classification purposes. No record was made of gifts and inheritances in the form of real estate, securities, and other property unless they had been sold during the survey year. In that case the net amount received from the sale was recorded as Other Money Receipts.

Personal Taxes. The net payments for Federal, State, and local income tax, poll tax, and personal property tax, after subtraction of any tax refunds received during the survey year. Occasionally tax refunds exceeded the taxes owed during the survey year, so that a family's income after taxes was greater than its income before taxes.

Net Change in Assets and Liabilities. The algebraic sum of increases and decreases in assets and liabilities. Net increases in assets or decreases in liabilities represent a net saving during the year. Net decreases in assets or increases in liabilities represent a deficit (-) or net dissaving.

Net Change in Assets. The algebraic sum of increases and decreases in assets. Increases in assets are represented by increases in cash holdings (including interest left on deposit), business investments, and money owed to the family; purchase and improvement of dwellings and other real property; purchase of stocks and bonds which are held at the end of the survey year; and increases in other assets. Decreases in assets are represented by decreases in cash holdings, business investments, and money owed to the family; sale of owner-occupied dwelling, other real estate, and personal property; sale or retirement of stocks and bonds owned at the beginning of the survey year; settlement or surrender of personal insurance policies held by a family member; and decreases in other assets.

Money Owed to Family. Includes changes in the amounts owed to the family on mortgage retained on property sold by the family, cash loans to individuals, escrow payments, or deposits on articles purchased but not delivered in the survey year.

Purchase, Improvement, and Sale of Own Dwelling. Includes the gross purchase price of the house or the total land and construction cost for the family's principal home or vacation home. Stoves, refrigerators, and all other consumer durable goods already installed at the time of purchase are included in the purchase price.

Improvements are additions or installations which add materially to the value of the property, such as a new room, garage, or porch; the original installation of electricity, heating, or plumbing; or the finishing of basements and attics. Special assessments for sidewalks, pavement, sewers, etc. are also included.

Sale of the family's dwelling or vacation home represents the selling price or trade-in allowance of a home sold in the survey year. If the entire value was not received at the time of the sale, the amount of the trust or mortgage which was retained by the family is shown as an increase in assets under Money Owed to Family.

Net Change in Liabilities. The algebraic sum of increases and decreases in liabilities.

Mortgage on Own Dwelling. Decreases in liabilities include principal payments on first or second mortgages on the family's principal home or vacation home during the survey year and the amount of the loan balance paid off by the family or assumed by the purchaser of a dwelling sold in the survey year. Increases in liabilities in this item include increasing mortgages through refinancing as well as taking out a new mortgage in the survey year.

Value of Items Received without Expense. This information was collected primarily to evaluate the completeness of income and expenditures as reported by the family, and has not been included in the averages of income and expenditures shown elsewhere in this table, except as noted under Housing, below. The figures represent the family's estimate of the money value of goods and services received as gifts from persons outside the consumer unit, or in exchange for trading stamps issued to customers by retailers, or from public or private welfare agencies, and of all goods and services received as pay except food or rent. The values were nominal in some instances when the family had little or no knowledge of the true value of the goods and services received, such as the cost of hospitalization and related services for an extended illness. No values were set on services customarily available without charge to the public in general, such as the use of parks and other recreational facilities, public schools, police and fire protection, etc.

Housing. Includes rent, repairs, or improvements to owned real estate, utilities, household operations, and housefurnishings and equipment provided without cost to the family. However, payments of property taxes, property insurance, or mortgage payments on an owned home by persons outside the consumer unit were counted as family expenditures with an offsetting entry of Gifts of Cash, which is included in Money Income.

Medical Care. Includes employer's contribution to health insurance plans; and other medical care (hospitalization, prescriptions, visits to the doctor, dentist, and outpatient clinic, etc.) furnished by employers, hospitals, welfare agencies, or persons outside the family.

Value of Home-Produced Food. The retail value of food which the family raised for its own use.

Location and Size of Place. The primary classification was the location of the family's residence inside or outside Standard Metropolitan Statistical Areas (SMSA's), as used by the Bureau of the Census. In addition, urban families living in metropolitan areas were grouped in the following four subclassifications: Central city (the largest city in an SMSA), other cities with population of 50,000 and over, cities under 50,000 and unincorporated places in urbanized areas, and urban places of 2,500 to 50,000 outside urbanized areas. Families living in urban places of 2,500 to 50,000 in nonmetropolitan areas were classified "Outside SMSA's." (See tables 30A, 30B, and 30C.)

Prices and Living Conditions

Chapter 8. Consumer Expenditures and Income

Background

Consumer expenditure surveys¹ are specialized family living studies in which the primary emphasis is on collecting data relating to family expenditures for goods and services used in day-to-day living. Expenditure surveys of the Bureau of Labor Statistics also include information on the amount and sources of family income, on changes in savings or debts, and on major demographic and economic characteristics of family members.

The Bureau's studies of family living conditions rank among its oldest data-collecting functions. The purpose of the first nationwide expenditure survey in 1888-91,² in line with the legislation creating the Bureau, was to study the worker's consumption habits and living costs as elements of production costs, with special reference to competition in foreign trade. It emphasized the worker's role as a producer, rather than as a consumer. Purposes and coverage changed in successive surveys, and problems caused by rising prices led to the second survey, during the year 1901. The index of prices of food purchased by workingmen, with weights based on the 1901 data, was used generally as a deflator for workers' incomes and expenditures for all kinds of goods until World War I. The third major survey, spanning 1917-19, provided weights for computing a "cost-of-living" index, now known as the Consumer Price Index (CPI). (See chapter 10.) The next major study, for 1934-36, was made primarily to revise these index weights and covered only urban wage and clerical workers.

However, in the severe economic depression of the 1930's, interest in consumer surveys expanded from study of the welfare of selected groups to general economic analysis. Thus, almost simultaneously with its 1934-36 investigation, the Bureau cooperated with four other Federal agencies in a fifth survey, the Study of Consumer Purchases, in 1935-36, which undertook to show consumption of all segments of the population, both urban and rural.³ The Bureau's sixth major sur-

vey, for 1950, covered all urban consumers. It provided the basis for revising the Consumer Price Index (CPI) and also supplied abundant material for broader types of economic and market analysis. The remainder of this chapter deals with the 1960-61 survey—the latest in the series⁴ describing changes in the consumption habits of the American people.

Description of Survey

The basic orientation of the Bureau's most recent survey was to obtain detailed information for revising the CPI. The increasing need for consumer expenditure and income data for other purposes was taken into account in planning the survey of urban families in 1960 and 1961. Then, in cooperation with the U.S. Department of Agriculture (USDA), the 1961 coverage was extended to rural areas. Thus, for the first time since 1941, information on spending habits became available for a cross-section of the entire noninstitutional population in urban, rural nonfarm, and rural farm areas of the United States. Concepts, techniques, and publications for the 1960-61 survey were planned to provide as much continuity and comparability as possible with the Bureau's 1950 and earlier expenditure surveys.

¹ In this chapter, the initials CES are used to refer to the program of consumer expenditure surveys.

² The State of Massachusetts conducted the first expenditure survey in the United States. This investigation of living conditions in 1874-75 undertook to measure the welfare of the workingman's family before and after migration to the United States. For a more detailed account of expenditure surveys in this country, see U.S. Bureau of the Census, *Historical Statistics of the United States—Colonial Times to 1957*, Chapter G (1960).

³ The Bureau also cooperated with the U.S. Department of Agriculture in a smaller scale nationwide survey of urban and rural families in 1941-42 to obtain facts on which to base decisions for the civilian economy during wartime. In addition, the Bureau conducted a Survey of Prices Paid by Consumers in 1944 among a nationwide sample of urban families; as a byproduct of the reports required for the analysis of prices, certain data on family income, savings, and expenditures were obtained.

⁴ In addition to these 7 major surveys, the Bureau has conducted a number of expenditure surveys in cities selected for specialized studies.

All data were collected through the voluntary cooperation of families.¹ The family, or consumer unit (CU), referred to (1) a group of people usually living together who pooled their income and drew from a common fund for their major items of expense,² or (2) a person whose income and expenditures were not pooled with others, whether living alone or in a household. However, never-married children living with parents always were considered as members of the parents' consumer unit.

Information was recorded for the family as composed in the survey year, including part-year members. Family members were not eligible for periods in the survey year that they lived in military camps, posts, or reservations; in institutions; abroad (except on vacation, etc.); or were members of another CU.³

A complete account of family income and outlays was compiled for a calendar year. This account included information to determine net changes in the family's assets and liabilities during the year. The estimated value of goods and services received as gifts or otherwise, without direct expenditures by the family, was requested also. To supplement the annual data, families who prepared meals at home provided a detailed 7-day record of expenditures for food and related items purchased frequently.

For selected items of clothing, housefurnishings, and food, the record of expenditures was supplemented by information on quantities purchased and prices paid. Characteristics of the housing occupied by homeowners and renters and an inventory of the major items of housefurnishings they owned were recorded.

To permit more meaningful analysis of the spending habits of American families, limited demographic information was obtained. This information included the sex, age, years of school completed, occupation, race, and marital status of each family member.

Data Sources and Collection Methods

All data were collected by personal interview. The BLS was responsible for collecting data from all residents of urban places. The BLS and USDA shared this responsibility in the rural areas

of Standard Metropolitan Statistical Areas (SMSA's)⁴ and the USDA had sole responsibility for interviewing rural households in nonmetropolitan areas.⁵

Field Organization

To reduce the size of the staff to be recruited and trained and to utilize this staff over a longer period, it was decided that the urban survey would cover 2 years, 1960 and 1961. For similar reasons, the surveys for each year were conducted in two "waves." As field work was completed in the largest SMSA's, supervisors were reassigned to smaller places. Interviews for the 1960 and 1961 CES were conducted in the spring and summer of 1961 and 1962, respectively.

The supervisory field personnel were recruited by the BLS Regional Offices⁶ and brought to Washington for 6 weeks of intensive training on the purposes of the survey, survey techniques, and schedule content. These supervisors went to an assigned city where they, in turn, recruited interviewers, whom they trained for about 8 days.

Questionnaires

The detailed questionnaires used by the BLS agents in interviewing families in the 1960-61 survey had been tested in surveys for 1959 in three cities. They incorporated modifications based on this experience. Three forms were used in the nonfarm surveys. Schedule A was a two-page form to determine the family's eligibility for the survey and, for families who refused or were unable to participate in the survey, it provided a record of minimum data for the analysis of non-response. Schedule B, on which the interviewer entered the complete annual record of the family's living arrangements, income, spending, and

¹ See discussion of bureauwide policy on voluntary reporting and confidentiality, under Introduction.

² This category includes children temporarily away from home at school or college.

³ The tabulations published in the CES reports listed in the table at the end of this chapter include only full-year consumer units, i.e., units with at least one member who was eligible over the entire survey year. In addition, the Bureau obtained schedules from approximately 400 part-year CUs, for special analytical research.

⁴ See appendix B for description of SMSA classification system.

⁵ See discussion of sample design, p. 56.

⁶ The following description refers to procedures of the BLS, but USDA procedures were similar.

changes in savings, consisted of 59 pages and formed the basic framework of the survey. Schedule C provided 15 pages for a detailed report of the family's purchases of food, beverages, tobacco, personal care, and household supplies in the week preceding the interview.²¹ The coding system for summarizing and classifying the data was devised while the 1960-61 schedules were being designed, and tabulating codes were printed on the schedules. The precoded data were then readily transferred to punch cards and magnetic tapes for tabulating.

Information in schedule B was grouped in 23 sections, placed in a sequence so as to establish and maintain rapport between the interviewer and the respondent. The detailed checklists of items²² in each section were included not only to facilitate recall, but to provide the specific information needed to determine CPI weights. However, all sections were rarely applicable to a single family. For example, if the family were renters, the sections relating to homeownership could be omitted. Families were encouraged to refer to records whenever possible.

Reported receipts and disbursements were summarized and reviewed in the field to determine the completeness, consistency, and balance of the family account. Families were reinterviewed when the field supervisor deemed it necessary to clarify

²¹ A modification of schedule B, providing for detailed reporting of farm receipts, disbursements, changes in farm assets, and value of home-produced food, but otherwise paralleling the non-farm schedule, was used by the U.S. Department of Agriculture in rural farm areas. Schedule C was not used in interviewing farm families.

²² For a discussion of global versus detailed questions and "free-listing" versus "check-listing," see report by Helen Humes Lamale, *Methodology of the Survey of Consumer Expenditures* (in 1950, Philadelphia, Pa., University of Pennsylvania, Wharton School of Finance, 1959, pp. 18-19).

²³ Prior to editing the schedules for machine tabulation, the schedules were reviewed in the Washington offices of the BLS and USDA primarily to determine that entries conformed to the survey concepts and methodology. This review was concentrated on sections of the schedule which had proved most difficult in previous surveys, and on unusual situations which required specialized instructions. Occasionally, schedules were returned to the field for clarification or additional information, and some schedules considered complete in the field were rejected in Washington. If a schedule met the test of the review and editing instructions with respect to internal completeness and consistency of expenditures with each other and the family's reported manner of living, the record was used even though there was a substantial lack of balance between the family's reported total receipts and disbursements.

²⁴ This procedure involves the probability selection of a sample "pattern" from a set of patterns purposively established so that, taken as a group, they give each primary sampling unit its proper chance of appearing in the final sample. The selection of the city sample is described in "Technical Note—The Revised City Sample for the Consumer Price Index," *Monthly Labor Review*, October 1960, pp. 1078-1083. (BLS Reprint 2352.)

ambiguous entries or to complete a record.²⁴ On the average, the interviewer spent 7 to 8 hours with a family in a series of visits arranged at the family's convenience.

Sampling

Separate stratified samples were selected for urban areas, rural areas in metropolitan counties, and rural areas in nonmetropolitan counties. A three-stage sample design was used within each area to obtain a sample of consumer units representative of all U.S. consumer units as defined for this survey.

In developing urban sampling plans, continued representativeness of the sample for measuring national changes in consumer prices was of paramount importance. Consideration of probable resources led to setting 66 as the maximum number of cities for the CES sample. Tests of the effectiveness of some of the more obvious modes of stratification indicated that no elaborate stratification was justifiable for so small a sample of cities. In general, classifications by geographic region and size of city seemed to be most effective, especially since an important objective in selecting specific cities was to achieve good geographic dispersion. For this purpose, the BLS utilized the "controlled selection" procedure.²⁵ The primary sampling unit was the Standard Metropolitan Statistical Area (SMSA) in the metropolitan segment of the United States and the individual urban place in nonmetropolitan areas.

Sample Design for Three Urbanizations

In the first stage of the design for the urban sample, all SMSA's and nonmetropolitan urban places were classified by population size and region. A sample of 66 places listed in the table was selected to represent all urban places in the 50 States. All of the 12 largest areas in the United States automatically were included. For New York and Chicago, the Standard Consolidated Areas, rather than the constituent SMSA's, were used as primary sampling units. However, in the collection and analysis of the data, the New York-Northeastern New Jersey Standard Consolidated Area was divided into two subareas—New York, N.Y. and Northeastern New Jersey. All of these largest areas were surveyed in both years with data

¶ Survey for 1959.

Note: The Bureau also has published reports for the following special-city surveys: Cincinnati, Ohio, 1959 (Report 23-75); Fairbanks, Alaska, 1959 (Report 23-30); Ketchikan, Alaska, 1959 (Report 23-31); Juneau, Alaska, 1959 (Report 23-32); Las Vegas, Nev., 1962 (Report 23-83); Houston, Tex., 1963 (Report 23-83); Kansas City, Kans.-Mo., 1963 (Report 23-79); Milwaukee, Wis., 1963 (Report 23-80); Minneapolis-St. Paul, Minn., 1963 (Report 23-81); and San Diego, Calif., 1963 (Report 23-82).

collected from half the sample of consumer units each year. Half of the remaining sample of smaller SMSA's and urban places was surveyed each year, i.e., for 1960 and 1961.

At the second stage, a sample of housing unit (living quarter) addresses was obtained in each city and in the entire urban part of each SMSA from the Comprehensive Housing Unit Survey (CHUS) conducted by BLS in the fall of 1960¹⁸ or 1961. The BLS housing unit surveys were based on area block samples designed to represent all noninstitutional living quarters (including non-transient accommodations in hotels and rooming houses) in the urban area.

¹⁸ Because of the shortage of time, the BLS did not conduct a CHUS in 1960 in places with population of 2,500 to 50,000. The 1960 sample for these cities was selected from 1950 Census of Housing and Population listings of living quarter addresses arranged by Enumeration Districts (ED's).

¹⁹ These classifications, which were on the basis of Census definitions, made it possible for the BLS to refer addresses of all households meeting the Census definition of farm operator or farm resident to the USDA for inclusion in the rural sample.

In the third stage, a subsample of addresses was selected from the housing unit addresses obtained in the CHUS or Census, arranged by a number of characteristics, e.g., household size.

The first stage in selecting the rural sample in metropolitan areas utilized all 34 SMSA's selected for the urban sample. In the second stage, BLS conducted a Rural Housing Unit Survey (RHUS) which consisted of a listing of housing unit addresses in a stratified sample of Census Enumeration Districts (ED's) and a subsample of smaller segments or blocks in the designated ED's. Each housing unit was visited and classified as farm or nonfarm, and as to whether the family included a farm operator.¹⁹ In the third stage, subsamples of rural nonfarm and rural farm housing unit addresses were selected from the RHUS listing by applying a ratio based on census data on rural farm and rural nonfarm households in each stratum.

In the first stage of the USDA's design for the rural sample in nonmetropolitan areas, counties were grouped by State Economic Areas¹⁷ into 126 strata equal in weighted counts of rural farm and rural nonfarm dwellings, as the same sample of counties was to be used for both farm and nonfarm households. For each stratum, one county was chosen at random with a probability proportional to its weighted count. Counties were selected from 41 States. At the second stage, within each sample county, a selection of rural segments was made separately from rural places (100 to 2,500 inhabitants) and the open country. Addresses of all housing units in these segments were listed and classified as farm and nonfarm. Farm operators also were identified. In the third stage, subsamples of nonfarm and farm housing unit addresses were selected from the survey listings.

Sample Size

The master sample for the total urban and rural population included 17,283 living quarter addresses which were assigned to the interviewers.¹⁸ Usable schedules were tabulated for 13,728 consumer units. The distribution of assignment addresses and usable schedules by urbanization, geographic region, and for individual metropolitan areas or cities in the urban sample is shown in the table.

Estimating Procedures

To describe the spending and saving of all families in the United States, data from the CES samples have been combined to obtain regional and U.S. levels.¹⁹ This information was summarized for each level of urbanization and for the entire population by using a system of weights based on the 1960 Census of Population.

To obtain the weights, adjustments were made in the Census total of persons in the population on April 1, 1960, to correct for definitional differences between the Census and the CES universe. The institutional population and on-post military personnel, which were not included in the CES, were deducted from the Census population. Since the CES data apply to the full survey year and family size is measured in year-equivalent persons, while the Census data are a count of persons on April 1,

1960, the Census data were adjusted to take account of births, deaths, and net civilian migration during 1960. For the 50 States, the net effect of the adjustments was to lower the population total from 179,325,674 to 177,391,360.

The total adjusted population was distributed among the sampling strata in accordance with the distribution of the unadjusted population. The population represented by each surveyed area was divided by the average family size in the area, as determined from the survey, to obtain the total number of families represented by each area. The estimated number of consumer units in the universe for the United States was 55,306,253.

The adjusted 1960 population was used as urban weights for both 1960 and 1961. Weights were computed for 67 urban strata,²⁰ including Anchorage, Alaska, which was surveyed for 1959. (See table.) Rural nonfarm weights were computed for 42 strata—34 SMSA's and a farm operator and nonoperator stratum for each of the four regions. The rural farm sample was designed to be self-weighting within regions. Sample averages for the four regions were combined to U.S. levels by the application of weights consistent with those weights used in the urban and rural nonfarm parts of the CES.

In applying the weights to the stratum averages, to obtain U.S. and/or regional averages, the blow-up factor for each class (e.g., income group, family-size class, etc.) was the number of consumer units in the universe represented by each sample family in a stratum multiplied by the number of families in the sample for that class. The resulting numbers of consumer units became the multipliers in calculating stratum aggregates which

¹⁷ See appendix B.

¹⁸ The address following each address in the master sample was picked as an alternate. The alternate address was substituted if the master address could not be located or the unit was vacant if no one was at home after at least 2 visits or if the occupant refused or was unable to give the minimum information required for classifying the family.

If the interviewer found more than one consumer unit living at an address, each unit was included in the sample. In hotels and apartments, the address given to the interviewer indicated a specific housing unit or units within the structure.

¹⁹ The samples were not designed to provide tabulations by State.

²⁰ For a single year such as 1961, the city weights differed from the 1960-61 weights, in that cities surveyed in that year carried the entire weight for their respective region city-size stratum in the 1961 tabulations. In combining 1960 and 1961, each year's sample represented approximately half of the adjusted population. The 1959 data for Anchorage were weighted into the combined 1960-61 tabulation for the West and the United States, but not into the tabulations for 1960 or 1961.

were combined to regional and U.S. levels. The regional and U.S. averages were obtained by dividing the sum of the stratum aggregates by the number of consumer units in the universe for the class.

Analysis and Presentation

Data were tabulated separately for each city and region listed in the table. All dollar values (income, expenditures, and changes in savings) were shown as averages per family (i.e., consumer unit). As city tabulations were completed, they were examined for reasonableness and internal consistency, and were compared with tabulations for other cities in the 1960-61 CES sample and with information from independent sources—principally the 1960 censuses of population and housing. Similar analytical comparisons were made for the regional and U.S. tabulations at each level of urbanization. For the urban sample, trends since 1950 were analyzed for cities which were in the CES sample for both periods. Each report contained brief analytical and interpretative text, plus definitions and statements on methodology.

The basic reports (see column 5, table) presented averages for major components of family accounts for consumer units classified by five characteristics: Family income after taxes, family size, age of family head, occupation of the head, and housing tenure. Supplement 1 presented the same information, classified by four additional characteristics: Education of the head, race, family type, and number of full-time earners. At the regional and U.S. levels, families also were classified by whether they lived inside or outside metropolitan areas; and inside SMSA's, by central city and other location.

Data for eight family characteristics in the above summaries were cross-classified (two variables) with each of other selected characteristics, as follows:

1. Family size with income, age of head, family type and location and size of place.
2. Age of head with income, occupation of head, and tenure.
3. Occupation of head with income, race, and tenure.
4. Education of head with income, and occupation of head.
5. Race with income, and tenure.
6. Number of full-time earners with income.
7. Tenure with income.
8. Family type with income, and occupation of head.

The two-variable tables are published as Supplement 2 to the basic reports.

Supplement 3 presents in detail the components of consumer expenditures, income, and changes in savings, which were summarized in the basic reports and Supplements 1 and 2. To illustrate, the category "automobile transportation" is broken down into 10 subgroups of expenditures. These detailed tabulations provide data for consumer units cross-classified by family size and income after taxes, and by family size and location of the family's residence inside or outside SMSA's.

Uses and Limitations

From its inception, the 1960-61 CES was planned to serve a variety of purposes. To this end, questionnaires and tabulation plans were circulated among a number of Federal agencies for comment. The BLS also formed the Consumer Expenditure Advisory Committee, representing academic, private research, and marketing users, and consulted with this Committee on a wide range of decisions affecting the CES. To date, the results have been used for only some of the contemplated purposes.

As stated earlier, the primary objective of the 1960-61 CES was to revise the CPI (chapter 10). The Bureau also uses the data to revise and expand its work in deriving standard quantity budgets for selected types of families (chapter 9). As time and resources permit, the Bureau proposes to draw upon this fund of consumer information to develop a broad program of family living conditions studies.²¹

The U.S. Department of Commerce relies on these family expenditure studies as the sole source of information for revising its benchmark estimates for a number of components in the household sector of the national accounts. The Internal Revenue Service used the published 1960-61 data to revise its tables of State sales tax payments, for guidelines to taxpayers in filing their Federal in-

²¹ The Bureau has initiated a series of special analytical reports (BLS Report 238-1, et. seq.) based on the 1960-61 CES. A list of reports in this series is available upon request.

The Bureau also prepares methodological monographs for the expenditure surveys which compare national aggregates of income, expenditures, and savings derived from the CES with aggregates developed for the national income and product accounts by the U.S. Department of Commerce and with data from other sources.

come tax returns. Currently the Department of Health, Education, and Welfare is studying the data in connection with numerous welfare analyses.

A number of universities utilize the Bureau's basic data in a variety of research projects. The potentialities of the survey results in consumer market analysis are evident from reports issued by the National Industrial Conference Board, the Chamber of Commerce of the United States, and a variety of trade publications and business organizations.

Data obtained from a sample survey as complex as the survey of Consumer Expenditures are subject to many types of errors. These include sampling, recording, and processing errors, and errors due to the refusal or inability of some families to give the information requested.

All data were reviewed, edited, and screened to minimize processing errors. Chance variations due to sampling can be measured statistically, and the BLS has published preliminary rough estimates of sampling error in the urban sample, in its report for the urban United States. Preparation of more detailed estimates for both the urban and rural segments will depend upon the availability of resources. Each report contains a section alert-

ing users to the cautions that must be exercised in using averages based on small samples and provides either the actual number or the basis for determining the number of families on which the averages in each table are based. Approximately 78 percent of the national sample of urban and rural families furnished usable schedules and some of the nonrespondents supplied limited information on family characteristics.²² Among the participating families, inaccurate reporting is a source of error, despite continued research in schedule design and intensive training of the interviewers. Such inaccuracies result from memory errors, misunderstanding of a question or reluctance to answer it, and incorrect entries by the interviewer. Although the BLS and USDA have accumulated substantial knowledge about such reporting errors and will continue research in this field, these errors cannot be quantified satisfactorily.

²² This information is used in the monographs on methodology (see footnote 21) to evaluate the nature of the sample losses due to nonresponse. It has been the Bureau's practice not to attempt to introduce in the basic CES tables adjustments for nonresponse or for the underreporting which is common in virtually all compilations of income statistics. Such adjustments present many difficulties when data are cross-classified as extensively as are the CES tabulations.

PURPOSE OF THE HANDBOOK

This handbook provides background information for analysts in their use and interpretation of the data from the Bureau of Labor Statistics Survey of Consumer Expenditures, 1960-61. It contains a brief general description of the survey--why and how it was made, the collection and processing of the data, and possible sources of error in the material, but it does not attempt here to discuss these subjects in detail--that will be the function of a methodology monograph, ~~planned for publication~~ ^{ILLUSTRATED BY ALREADY SENT} ~~TO TAKE PURCHASE~~. The detail which the Handbook does provide is contained in a series of attachments which include selected descriptive information, and some of the basic working materials from the Survey. These attachments should be of assistance to persons using the BLS published data, analytical reports based on these data, or the General Purpose Family Tape. Chief among the working materials are the following:

1. Coding System (Attachment 8). This manual lists numerically, by section and item reference codes, the data from the main collection schedule, BLS 2648-B. The Coding System organizes and classifies the data within the major categories used in the BLS tabulations (income, savings, current consumption expenditures, etc.). The location of the items on the schedule is also shown, thus indicating how the data, as collected, were regrouped for the tabulations.
2. Definitions of the schedule items, and adjustments made in the data in the course of editing, are given in Attachment 6, (set up in the same section and item sequence used in the collection schedule). These, and the schedules themselves (Attachment 5), provide answers to questions concerning what was included in the item detail. In addition, Attachment 6 indicates how various problems affecting the final form of the data were handled in reviewing and editing the materials.
3. Classification Codes (Attachment 9). Located here are the codes for classifying variables developed by BLS for its tabulations, and generally available on card or tape for use in further tabulations.
4. Weights. The weights used in estimating regional and U.S. totals of the CES data for urban and rural areas are given in Attachment 10. These tables also present data used in calculating the weights. A further brief discussion of the derivation and application of the weights appears in the section on Sample Selection and Weighting, pages 5-10.

DESCRIPTION OF THE SURVEY

Purpose, Scope and Uses

The 1960-61 nationwide Survey of Consumer Expenditures (CES) collected data on family expenditures, income, and changes in assets and liabilities. The primary purpose of the survey in urban places was to obtain detailed expenditure data for revising the weights for the BLS Consumer Price Index (CPI), and selecting the items to be priced for that index (the "market basket").

Beyond the CPI revision, the survey was planned to provide data for many other important needs, and consequently its coverage was not limited to CPI urban wage earners and clerical workers. The overall CES urban sample was designed to represent the entire noninstitutional urban population. Moreover, for 1961 the survey was expanded to include rural families (with the collection of the rural schedules a joint responsibility of BLS and the U.S. Department of Agriculture). Not only will the data for each urbanization group (urban, rural nonfarm, and rural farm) be summarized separately for four regions and the U.S., but the urban and rural nonfarm will be combined, and also the urban will be combined with the total rural results, thus producing estimates of the expenditure patterns of the total nonfarm and total U.S. populations, respectively.

BLS plans further use of the CES data on its standard budget research program (which will include the revision of the City Worker's Family Budget and the Elderly Couple's Budget), and in studies of consumer demand, levels of living, poverty, etc. Beyond the Bureau's own plans, the CES data will also serve the needs of a wide variety of public and private users, including those interested in economic policy, marketing, consumer economics, social welfare, and a host of other fields.

Experience has shown that a significant part of the demand for consumer expenditure data can be satisfied by a relatively small number of summary tabulations, and consequently BLS is issuing a series of limited General Purpose Tables covering the basic CES data. Illustrative copies of a report on the 237 series (BLS Report 237-38), and of Supplements 1 and 3 of that report, will be found in Attachment 11. Reports similar to 237-38 are available for all SMSA's and other urban places in the sample, and Supplement 1 is available for each SMSA. (Supplement 2, when issued, will contain data in the same format as Report 237-38 and Supplement 1, but with a cross-classification of family characteristics).

However, since the General Purpose Tables will not satisfy research requirements for which more detailed information or special treatment of the data are essential, BLS may also make available on a reimbursable basis a General Purpose Family Tape, covering, for each consumer unit, characteristics information and data for major groups and selected subgroups of expenditures, income, and changes on assets and liabilities.

(See Attachment 12 for a further description of the tape). It should be stressed that the issuance of the tape will be governed by the Bureau's policy on confidentiality (see also, Data Collection, page 10.)

Sample Selection and Weighting

I. The Urban Sample 1/

A three-stage sample design was used to select a sample representing families and single consumers in the urban population.

The first stage was the selection of the cities 2/ to be surveyed by a stratified sampling of Standard Metropolitan Statistical Areas (SMSA's) and individual urban places outside SMSA's. Two modes of stratification were used: the geographic areas constituting the four Census regions (Northeast, North Central, South, and West); and four population size strata (A, cities over 1,400,000; B, 250,000 to 1,400,000; C, 50,000 to 250,000; D, 2,500 to 50,000). A total of 66 urban sample areas ("cities") 3/ were selected for the CES, to represent all urban places in the fifty states. See Attachment 1 for a map showing the regions and the location of the cities in the urban sample.

Since the consumer expenditure surveys were conducted in two years (1961 and 1962, covering the years 1960 and 1961, respectively), the city sample was divided into two balanced subsamples, each representative of the U.S. urban population. In the 12 largest SMSA's (the A stratum cities), one-half the sample was surveyed each year; in the other city-size classes, one-half the sample of cities was surveyed each year.

1/ The selection of the city sample is described in greater detail in "Technical Note - The Revised City Sample for the Consumer Price Index, " Attachment 2.

2/ Throughout this discussion the term "city" is used to designate the entire urban part of the SMSA (or Standard Consolidated Area - see next footnote), or Stratum D cities (bounded by the city limits), outside SMSA's.

3/ These areas included all 12 of the largest SMSA's. For Chicago and New York the sample area was the Standard Consolidated Area (rather than the SMSA), and for ELS tabulations the New York SCA was divided into two subsections: New York and Northern New Jersey. ELS tabulations for the combined years 1960-61 covering the urban population in the Western region and the United States, also included the city of Anchorage, Alaska (surveyed for 1959).

For the second stage, a sample of living quarter addresses was obtained in each city from the Comprehensive Housing Unit Survey (CHUS) made by BLS, or from listings recorded in the 1960 Census of Population and Housing. The CHUS, conducted in cities with populations of 50,000 or more in 1960, and in places with populations of 2,500 or more in 1961, was based on area block samples designed to represent all noninstitutional living quarters (including nontransient quarters in hotels, motels, and rooming houses) in the urban area. The 1960 sample for cities of less than 50,000 population was selected from Census listings of living quarter addresses, arranged by enumeration districts.

In the final stage, the addresses for the Consumer Expenditures Survey were drawn in each city from the CHUS or Census area samples of living quarter addresses, stratified by characteristics of the dwelling and household, ^{4/} with every nth address selected. This procedure yielded a master sample of 12,203 living quarter addresses. (If more than one consumer unit (see Attachment 6, p. 1 for a definition) resided at a living quarter address, each such unit was included in the sample, and was scheduled if it met the eligibility requirements for the survey).

From both the BLS and Census arrays of addresses, an alternate sample was selected by picking the address following each address selected in the master sample. The designated alternate address was substituted if the master address could not be located; the unit was vacant; no one was home after at least 2 visits; or the occupant refused or was unable to give the information required to complete a nonresponse form.

A table listing the cities in the urban sample by region and stratum, and reporting the sample size (i.e., the number of assignment addresses in the master sample) and the number of complete (usable) schedules obtained in each city, will be found in Attachment 3.

II. The Rural Sample

A. Within SMSA's

The first stage of the sample design utilized the 34 SMSA's selected for the urban sample. In the second stage, BLS conducted a Rural Housing Unit Survey (RHUS), with the samples drawn by first selecting stratified samples of Census Enumeration Districts (ED's), and within these ED's

^{4/} The stratifying variables were: Type of housing unit, number of persons in the unit, location (central city or outside), race, and family income.

selecting subsamples of blocks or small segments. Listings were then made of all housing units in these segments, classifying them as "farm" or "nonfarm" (by Census definition), and as "farm operator" or "nonoperator," (based on whether or not the unit included a farm operator). In the third stage, subsamples of rural nonfarm and rural farm housing addresses were selected from the REUS listings by applying a ratio based on Census data on rural farm and rural nonfarm households in each stratum.

B. Outside SMSA's

For the first stage the Department of Agriculture grouped counties by State Economic Areas into 126 strata of equal size. From each stratum one county was chosen at random with a probability proportional to its size. In the second stage, within each sample county a selection of rural segments was made separately from rural places (less than 2,500 inhabitants) and the open country. Addresses of all housing units in these segments were listed and classified as farm and nonfarm. Farm operators were also identified. In the third stage, subsamples of nonfarm and farm housing unit addresses were selected from the survey listings. Rural farm consumer units, and the relatively small number of rural nonfarm consumer units operating farms on which they did not live, were sampled at a heavier rate than other rural consumer units.

4

(See Attachment 3 for the number of completed (usable) schedules by urbanization, location in SMSA's and region).

III. The Samples and Weighting

A. The Need for Weights

The sample for the urban CES was not designed to be self-weighting, except within individual primary sampling units (Standard Metropolitan Statistical Areas or other urban places). The same group of SMSA's selected for the urban sample was utilized for the rural metropolitan segment, and the Department of Agriculture selected the primary sampling units for the rural population outside SMSA's. Aside from the various differential sampling rates for the urban population among individual SMSA's, unequal overall sampling rates were used for the urban, rural nonfarm, and rural farm components. Therefore, the sample is not self-weighting across urban areas or across any combination of the urban, rural nonfarm, and rural farm segments. This means that the sample data cannot be pooled and simple averages, percentages, etc., computed from sample aggregates. (Although the rural farm sample was designed to be self-weighting, regional weights were eventually used to take care of differential response rates.)

B. Derivation of the Weights

1. The starting point for deriving the weights was the U.S. Census population counts for April 1, 1960. CES differences in definition and scope required certain adjustments in the Census counts, to eliminate population not eligible for the CES (on-base military personnel, and institutionalized persons), and to estimate (using data on births, deaths, and net migration) the population for the entire year 1960, rather than for a single point during that year. (For a discussion of eligibility for inclusion in a CES consumer unit see Attachment 6.) The adjusted population corresponded conceptually to the CES equivalent full-year CU members. 5/

Limitations of available data necessitated making this adjustment only on a national basis. The distribution of the adjusted 1960 population by city-size strata was the same as that of the unadjusted population. The adjusted 1960 population was used in deriving both the 1960 and 1961 weights.

Since Stratum A was made up of all the SMSA's with total urban populations of over 1,400,000, each SMSA in the stratum was assigned its own adjusted population. For Strata B, C, and D, (in which the sampling of areas occurred) the adjusted population was divided equally among the sample SMSA's or other urban areas in each regional city-size stratum. This assumption of equal area weights within a size stratum derived directly from the sampling operation itself, where, as a result of the method used (probability proportionate to size), the sample cities could be regarded as representing equal members of the total stratum population.

2. Since the CES universe consisted of consumer units, it was necessary to convert the adjusted population in each sampling stratum to CU's. The estimate of total CU's per sampling stratum was obtained by dividing the adjusted population data by the average number of persons per CU, as obtained from the CES (see Attachment 10).

5/ Since ELS data related to families as they existed throughout the survey year, average family size reflected the equivalent number of full-year persons, i.e., part-year membership in a family was shown as a fractional family member.

Survey data were collected for either 1960 or 1961 for sample cities in the B, C, and D strata. The estimated total consumer units in cities not surveyed for a given year were imputed to the cities which were surveyed. For example, Buffalo and Hartford were B stratum SMSA's in the Northeast Region. Buffalo, surveyed for 1960, carried the entire weight of the B stratum in the 1960 tabulations, and Hartford carried the weight in 1961. In combining 1960 and 1961, each SMSA represented half the adjusted population, with the difference in number of CU's per SMSA attributable to the difference in the average persons per CU (3.2 for Buffalo and 3.3 for Hartford).

The urban weights reflect two situations involving broader imputations. (1). For the C stratum in the Western region, no SMSA was surveyed for 1960. Accordingly, the CU's in this stratum were imputed to the surveyed cities in the West, in proportion to the distribution of CU's among these cities. (2). Although Alaska was a separate stratum for sampling purposes, it was allocated to the West for the regional tabulations (as was Hawaii). Since Anchorage, which was surveyed in 1959, was to be included in the 1960-61 combined tabulations, the CU's in this stratum were imputed to the Western cities in the same size stratum, both for 1960 and for 1961.

3. The estimates of CU's in the universe were the ultimate weights. The effective weights (or "expansion factors" - see last column of Attachment 10)--the estimated CU's in the universe represented by each complete schedule in a primary sampling unit (that is in a CES sample area)--were obtained by dividing the estimated number of CU's in the universe for each PSU by the number of CU's in the PSU for which there were complete schedules. The weight is the same for each schedule in the sampling unit.
4. In only one respect did the procedures for the rural nonfarm weight derivations differ from the urban segment. The difference arose from the differential sampling rate applied to farm operators and nonoperators residing in nonmetropolitan rural nonfarm areas (an "operator" did not live on a farm, but operated one at another location). It was necessary to adjust the nonmetropolitan universe estimates to compensate for the oversampling of farm operators in these areas. Thereafter, the weight calculations were exactly the same as those for the urban segment.

5. As previously noted, the rural farm sample was designed to be self-weighting. However, sample averages for the four regions were combined to U.S. levels by the application of weights consistent with those used in weighting the urban and rural nonfarm segments of the CES.

C. The Weights as Derived

Attachment 10 contains tables giving the urban, rural nonfarm, and rural farm weights and their derivation.

D. Application of the Weights

The weights are applied to each schedule, item by item. To obtain weighted averages for all CU's in a stratum, region or the U.S., the data in each record are multiplied by the weight for the respective PSU. For each table class of each stub item, the weighted data and the weights for all CU's in the respective class (whether or not they reported a particular item) are then summed to the universe (stratum, region, or U.S.) level, and the weighted aggregate divided by the sum of the weights. 6/

To obtain "Percent reporting," or the percent of CU's with any selected characteristic, the weights for the number in each class having the relevant value data or characteristic are summed to the universe level and divided by the sum of the weights for all CU's in the respective class at the universe level.

Data Collection and Reporting Forms

The Survey data discussed in this Handbook were collected by personal interview. As holds true for all material collected by BLS, the information was obtained on a completely voluntary basis, with a pledge that individual reports would be held confidential. The respondents were advised that the information they gave would be used for statistical purposes only, and would not be made available for tax or regulatory purposes. 7/ The names of the respondents were not recorded.

6/ No weights are necessary to obtain city averages, but operational convenience might indicate use of the weights and the procedure outlined above, for city averages as well as those at higher levels.

7/ This policy on confidentiality further means that the Bureau will not release the Survey data in any form which might identify a respondent and his expenditure report.

Data for 1960 and 1961 were collected in the first half of 1961 and 1962 respectively (at the time the annual data were collected, detailed food expenditures covering the week preceding the interview were also obtained for the urban and rural nonfarm parts of the sample). The questionnaires used by the BLS interviewers were developed out of the long experience of the Bureau with this type of survey, and had been pretested in three cities: Cincinnati, Ohio, and Fairbanks and Anchorage, Alaska. The reporting forms were designed with numerous probes and other aids to recall, and families were encouraged to refer to records whenever possible.

Three forms were used by BLS in the collection of urban data:

1. Schedule 2648A, Household Record: used to determine the eligibility and membership in consumer units of the persons at each assigned address. It also served to report on non-response cases and vacant living quarters.
2. Schedule 2648B, Annual Income, Savings, and Expenditures Record: this was the main collection schedule, containing not only annual value data, but descriptive information pertaining to the family and its income and expenditures.
3. Schedule 2648C, Food and Beverages, Personal Care and Household Supplies, and Tobacco Items purchased in a 7-day period: a detailed record of expenditures for the 7 days immediately preceding the interview, obtained at the same time as Schedule 2648B.

The schedules used for the rural surveys were the same as those used in urban areas, except that Schedule B for rural families contained some additional details on items of particular importance to farm operators, and there was no schedule comparable to BLS 2648C (7-day food, etc.) taken for rural farm families.

Copies of the above three BLS schedules are found in Attachment 5 of BLS BULLETIN 1654, CONSUMER EXPENDITURES AND INCOME: SURVEY COPIES Review and Coding of the Data

APPENDIX C

I. Hand Editing and Coding

EXHIBIT C OF APPENDIX C

Before the schedules were forwarded to Washington from the field they were given an initial edit, and reported receipts and disbursements were summarized and reviewed (using BLS 2648D, the Summary Sheet, which indicated the difference between reported total receipts and reported total disbursements, i.e., the "Account Balancing Difference." See Attachment 7 for a copy of this form). These operations determined the completeness and consistency of the reporting and recording of the data, as well as the balance of the family account. Where necessary, respondents were reinterviewed in order to clarify ambiguous entries and complete the record. When the schedules arrived

in Washington they were first examined to be certain that they were complete and usable, and that entries conformed with survey concepts and methodology. This review concentrated on sections of the schedule which had proved most difficult in previous survey experience, and on unusual situations requiring specialized instructions, prior to the standard editing and coding operations. The primary criterion for determining the acceptability of a schedule was the completeness and reasonableness of reported expenditures, rather than the degree to which receipts and disbursements balanced.

The next step was to edit and do all necessary hand coding on the complete and usable schedules which were to be punched. Some classification information (such as sex, marital status, tenure, type of housing, and other characteristics data) were precoded on the schedule, as were item descriptions for the housefurnishings and clothing sections. A list of the classifications codes developed by BLS can be found in Attachment 9, while Attachment 8 gives the section and item coding system used in the tabulations. (Brief descriptions of the contents of these attachments can be found on page 3 above.)

II. Machine Screening and Coding

The edited and partially coded data on the schedules were transferred to punch cards. There followed a series of machine screening programs using IBM 650 and 1401 equipment. Checks were made for coding and punching errors. Characteristics data were checked for consistency, and certain characteristics codes (e.g., family size, income, etc.) were computed. Dollar values were screened for extension errors, balance checks, limits for prices and for some expenditures, duplicates, etc. All listings from the machine screening were reviewed and instructions prepared for correcting any errors on the punch cards.

Sources of Error in the Data and Implications of Basic Survey Orientation

Data obtained from a sample survey as complex as the Survey of Consumer Expenditures are subject to many types of errors. This discussion is limited to the main types and some of their possible effects on the survey results. In the case of some items there is considerable information available for use in evaluating the findings; with others very little is known, and analytical results must be interpreted cautiously, keeping in mind possible unknown effects. 8/

8/ For a detailed evaluation of similar 1980 data, see Immale, Helen, "Sources of Error in the Survey of Consumer Expenditures".

Errors in the data include those stemming from sampling, reporting, or processing, as well as those due to the inability or refusal of some respondents to give the requested information. Chance variations due to sampling can be measured statistically, and BLS plans to estimate the sampling error for selected items and groups of items. Processing errors--which may occur in the field recording, the editing and coding, or the punching and machine tabulations--were minimized by extensive review and editing, and by machine screening.

I. Nonresponse Errors

Roughly, eighty percent of the total U.S. sample (urban, rural nonfarm, and rural farm) furnished complete (usable) schedules. Some of the nonrespondents supplied limited information on family characteristics which will be used to evaluate the nature of the sample losses due to nonresponse. In the 1950 BLS expenditure survey it was found that such sample losses did not seriously affect the expenditure averages. However, since the loss rates were not constant throughout the distribution (especially they tended to be higher at the two extremes of the income distribution, and also higher for single consumers than for families), the losses might have been important in some areas of analysis.

II. Response Errors

Among participating consumer units, inaccurate reporting continues as a source of error despite continued research in schedule design and intensive training of the interviewers. Although substantial knowledge has been accumulated about reporting errors, and research continues in this field, these errors cannot be quantified satisfactorily.

Memory errors account for a large part of the inaccurate responses, and may result from one or more of a number of factors. Such errors increase in size and frequency as the length of time between events and attempts to recall them increases. They tend to be larger for relatively unimportant purchases than for important ones, and greater for small expenditures infrequently made than for regular expenditures. A long interview may cause fatigue, and thus increase memory errors. Another memory trait is the tendency to "collapse" time--that is, to report as purchased in the survey year large important items actually bought earlier, thus giving an upward bias to the expenditure data.

Inability to furnish correct information may also result from incomplete knowledge of the income or expenditures of other family members. Or response bias may be injected because of

misunderstanding a question, or being reluctant to answer it. Such reluctance may even lead to falsifying the answer, as is often the case in reporting expenditures for alcoholic beverages. While such potables tend to be underreported, other purchases may be biased upward by the overreporting of various "prestige" items. ("Prestige," it might be noted, may attach to rather unexpected things--as was apparently the case in the community in which practically every bedsheet reported purchased in the survey year was percale.)

In 1950, it was found that the size of the discrepancies resulting from response errors varied item by item. However, goods and services could be grouped into three broad classes, according to the degree of reporting error likely to be present:

- A. Durable goods and regular expenditures (rent, utilities, etc.): reported expenses were apt to be accurate.
- B. Miscellaneous smaller items of personal and household expense, irregularly purchased: these were likely to be subject to fairly large but random reporting errors. It was assumed that in general such errors averaged to zero within homogeneous groups of families, and they created no difficulties for averages by income levels, or similar tabulations. However, for certain statistical investigations, such as multivariate analysis, there might be serious difficulties because individual family reports might deviate from the "true value" for these particular families.
- C. Those expenditure items which might be subject to various systematic errors - such as alcoholic beverages, or tobacco.

Earlier expenditure surveys also indicated that there were different degrees of accuracy in the various components of total income. Generally, wages and salaries were the most accurate, entrepreneurial income somewhat less complete, and interest, dividends and rent substantially underreported. These varying degrees of income accuracy could have a direct effect on two important types of analysis: 1) the number and percent of families receiving specific kinds of income, and 2) comparisons of average incomes from different sources. Therefore, some evaluation of the extent of underreporting in the various components of income should be made before using unadjusted field survey data for either of these purposes.

III. Basic Survey Orientation, and Resulting Limitations on Use of Data

In using the CES data for analytical purposes and for comparison with related material from other sources, the basic orientation of the survey and the limitations this imposes on other uses of the results must also be recognized. The survey was designed primarily to obtain in detail the most accurate information possible about family expenditures and spending patterns, including quantity and price for some purchases. In order to interpret these expenditure patterns, information concerning family income was also collected, and as a final step in completing the account of their financial experiences, families were asked to report on net changes in assets and liabilities. If a family's 12-month account was complete and error-free, receipts would equal disbursements, but such precision is rarely achieved. Therefore, when a survey schedule met the test of the editing instructions concerning internal completeness and consistency of expenditures--with each other, and with the family's reported manner of living--the record was used, even though reported expenditures plus savings did not equal income. Schedules were not automatically rejected because of high "balancing differences."^{9/} Although these differences are measures of net reporting discrepancies in the income, expenditure, and savings figures, it is not possible to estimate how much of such differences can be assigned to any of the three categories. ^{10/} The primary emphasis throughout the survey was on complete and reasonable records of expenditures, and if this condition appeared to be satisfied, the standards for completeness of the savings and income records were less rigorous.

^{9/} In the total account of receipts and disbursements, the balancing equation can be shown as:

<u>Total Receipts</u>		<u>Total Disbursements</u>	
Income after taxes	}	Consumption Expenditures	{
+		+	
Other Money Receipts		Personal Insurance	
+		+	
<u>Money or credit from</u>	}	Gifts and Contributions	{
decreases in assets and/or		+	
increases in liabilities	}	<u>Money outlays leading to</u>	
		increases in assets and/or	
		decreases in liabilities	

^{10/} Available evidence does indicate that average family income is usually understated; average family expenditures are also understated, but somewhat less; and average savings are greater or dissavings less, than shown by the reported changes in assets and liabilities.

Technical Note

The Revised City Sample for the Consumer Price Index

MARVIN WILKERSON *

IN JUNE 1959, the Bureau of Labor Statistics began a 5-year revision project for modernizing the Consumer Price Index (CPI).¹ As part of this project, the Bureau has selected a new sample of cities in which prices of commodities and services and consumer expenditure data will be collected. The expenditure data will be used in the revision of the weights for the index.

Plans for selection of cities were developed after careful evaluation of the considerations which led to adoption of the present sample of cities in 1952² and of the desirability of preserving the continuity of indexes for several individual cities now included in the index. Continued representativeness of the sample for purposes of measuring national changes in consumer prices was deemed to be of overriding importance.

A core sample of 50 cities for CPI pricing and about 70 cities (later set at 66, including the 50 CPI cities) for the consumer expenditure surveys was established as the maximum size consistent with the assumption that the resources for the pricing program will continue to be near present levels. The increase from the present 46 CPI cities to the planned 50 is quite nominal in view of the additional coverage of Alaska and Hawaii. In addition, two alternate samples were selected which can be utilized for expanding the pricing work if future circumstances permit.

Primary Sampling Unit

The primary sampling unit in the new sample is the Standard Metropolitan Statistical Area (SMSA) in the metropolitan segment of the United States and the individual urban place in nonmetropolitan areas.³ (The term "city" is used in this article to designate the entire urban part of the SMSA.)

1078

From the Monthly Labor Review, October 1960
Reprint No. 2352

The SMSA is usually slightly more extensive than the "urbanized area" unit used in the 1952 revision, encompassing some small noncontiguous urban places that were not included in the urbanized area. Expenditure patterns and price movements in these small places can be expected to resemble those in the metropolitan urban segment more than those in nonmetropolitan urban places.

For planning the design of the sample, estimates of total and urban population for all counties in the United States as of January 1, 1959, were obtained from Sales Management, since data from the 1960 Census of Population were not yet available. These estimates are projections of 1950 Census data adjusted to less detailed Bureau of the Census estimates for 1959. Among individual nonmetropolitan urban places, Sales Management estimates were available only for cities of about 10,000 or more. For smaller places, the BLS made its own estimates for all places that were urban in 1950 and for some 200 other places that were estimated to have grown into urban status (over 2,500 population) by January 1, 1959.

Stratification

Tests of the effectiveness of some of the more obvious modes of stratification, such as geographic region, size of city, and climate, indicated that no elaborate stratification was justifiable for a sample of only 50 areas. Analysis of variance techniques were applied to price movements for three different time periods for 25 items and groups of items; similar analyses utilized expenditure data from the 1950 Consumer Expenditure Survey. These results were of limited usefulness because of

* Of the Division of Prices and Cost of Living, Bureau of Labor Statistics.

¹ The circumstances that necessitate revision, and the overall plans for the revision, were outlined in the September 1959 issue of the Monthly Labor Review (pp. 967-970).

² See Selection of Cities for Consumer Expenditures Survey, 1950 (in Monthly Labor Review, April 1951, pp. 330-335).

³ The Standard Consolidated Areas for New York and Chicago were used as single primary sampling units rather than being divided into their constituent subareas.

UNITED STATES DEPARTMENT OF LABOR
BUREAU OF LABOR STATISTICS

the small number of cities, time periods, and items for which data were tested. The significance of the different classification modes varied from item to item, but in general, classifications by region and by size of city seemed to be most effective. Since these are the two most useful modes of stratification from almost any point of view, it was decided to use them. The four Census regions—Northeast, North Central, South, and West—were used for the geographic areas. The size stratification was of particular importance because of differential cost factors. Four population size strata, the same number used in the last revision, seemed to be about the maximum which the sample size would justify: Less than four would mean excessively wide stratum limits—even with four, the limits are far apart.

A number of possible size groupings were considered. Considering the population growth since 1950 and the relatively unchanged city sample size, it was decided to set the lower limit for the largest SMSA's—that is, the A stratum—at 1,250,000. This retained the 12 largest areas now included in the CPI sample as certainty selections in the new sample. For the other three population strata, it was believed that commonly used size groups would facilitate comparison with other economic data. Accordingly, the following were decided upon:

Stratum A—Cities of over 1,250,000 population.

Stratum B—Cities of 250,000 to 1,250,000 population.

Stratum C—Cities of 50,000 to 250,000 population.

Stratum D—Urban places of 2,500 to 50,000 population.

One merit of this classification is that the first three strata correspond closely to the metropolitan segment, and the last to the nonmetropolitan segment of the urban population. In addition to the SMSA's which had already been defined for the 1960 Census, other cities which were estimated to have passed the 50,000 population mark and

which were designated as "potential" SMSA's, were classified in the C stratum. Since the few additional SMSA's that will probably be established in the 1960 Census count could not be identified in advance, they were classified in the D stratum.

Alaska and Hawaii posed special problems. Although their urban population did not justify the allocation of a sample city to each, they are so different from the continental (48) States, and from each other that there appeared to be no alternative to making each a separate stratum with a sample place for each. The urban population of Alaska is concentrated in the areas of Anchorage, Fairbanks, Juneau, and Ketchikan. Anchorage was randomly selected to represent Alaska in the CPI. Since over 86 percent of Hawaii's urban population is concentrated in the Honolulu SMSA, Honolulu was designated as the sample city to represent the total Hawaiian urban population.

Developing the CPI Sample

The certainty selection of the 12 largest cities and the allocation of one sample place, each to Alaska and Hawaii left 36 cities to represent the B, C, and D strata urban places in the other 48 States. These 36 were divided among strata on the basis of the relative importance of their urban population and the estimated annual costs of operating a pricing program in cities of different size.⁴ The resulting optimum allocation is shown in the following tabulation:

	All three strata	Stratum		
		B	C	D
Northeast.....	7	2	2	3
North Central.....	11	3	3	5
South.....	13	3	4	6
West.....	5	2	1	2
Total, 48 States.....	36	10	10	16

An important objective in selecting the specific cities was to achieve a good geographic dispersion. Thus, minimizing the possibility of an undue concentration of the sample in any State was particularly important because, for many items, price factors are closely related to local conditions. After considerable consultation and experimentation, the BLS decided to utilize the procedure usually referred to as "controlled selection."⁵ A significant advantage of this method for the

⁴ Analysis of price data available from the current CPI sample did not reveal any consistently greater variability within any stratum, so this factor was omitted.

⁵ Considered and discarded as an independent probability selection for each size group, because it was impossible to prevent the selection of sample cities from the several strata in the same State where the size of the State did not warrant such extensive representation. Another method considered was a procedure whereby the sample for all size strata could be selected by one systematic operation from an array of all primary sampling units. This method was discarded because of the distortion of the original probabilities of selection associated with individual cities.

The method chosen is described by Roe Goodman and Leslie Kish in *Controlled Selection—A Technique in Probability Sampling* (in *Journal of the American Statistical Association*, September 1950, pp. 350-372).

	D	.264																

type of sample being selected is the provision for rigorous geographic controls. Other advantages are that it is a probability method in which the assigned probabilities of selection for individual cities are demonstrably maintained, that it is a tested and reputable system which has been in use for a number of years by other organizations, and that it is described in the literature and technicians can be referred to a published reference.

The controlled selection procedure involves the probability selection of a sample "pattern" from a set of patterns which have been purposively established so that, taken as a group, they give to each primary sampling unit its proper chance of appearing in the final sample. Each pattern is set up in accordance with controls, which may be as rigid as desired, to insure that it satisfies selected criteria of proper distribution. In selecting the CPI sample, controls were used only on size of city and geographic location, with the latter control carried to the State (or group of small States) level.

In order to expedite the work, patterns were established for each of the four broad regions of the country separately. Time did not permit the more elaborate control that could have been maintained by selecting national patterns.

The first step was to determine the probabilities of selecting a given size city from each stratum within each State or group of States.⁶ These probabilities are based on estimated urban popula-

tion figures previously described. The sum of the probabilities over all States in the region for any size group is equal to the number of sample places allocated to that stratum. The set of patterns which are derived must exhaust all these selection probabilities exactly. The probabilities also set limits as to the patterns which may be chosen. For example, the following illustrative tabulation for the Northeast shows that no pattern can contain more than one sample place each in five of the States in the region, but the other two (New York and Pennsylvania) can have either one or two selections each.

	Probability of selection of cities in—			
	B stratum	C stratum	D stratum	B, C, and D strata
Maine-New Hampshire-Vermont	0.153	0.544	0.697	
Massachusetts	0.247	.421	.312	.980
Rhode Island	.256	.040	.305	.305
Connecticut	.364	.263	.293	.942
New England	.867	.839	1.298	2.924
New York	.898	.225	.757	1.870
Pennsylvania	.245	.728	.761	1.734
New Jersey	.189	.264	.472	.925
Middle Atlantic	1.133	1.141	1.602	4.076
Northeast	2.000	2.000	3.000	7.000

In addition, a further control was used to insure representation of the New England States as a group and of the Middle Atlantic States as a group. In most cases, the patterns must con-

⁶ In 5 instances, 2 or more of the less populous States were grouped together and treated as a single State: Maine, New Hampshire, and Vermont; Nebraska, North Dakota, and South Dakota; Colorado and New Mexico; Arizona, Nevada, and Utah; and Idaho, Montana, and Wyoming.

tain three selections from New England and four from the Middle Atlantic region, although at least one pattern must contain two and five, respectively, in order to exhaust the .076 probability of having only two selections in New England.

The patterns were set up by State-size groups rather than individual places because the additional work was not feasible. Instead, a second

stage of controlled selection was used in States where more than one sample selection fell.

Table 1 presents a simplified diagram of the patterns set up for the Northeast. Many other possible sets would satisfy all the conditions imposed. The probability assigned to each pattern is usually the smallest remaining probability of any category affected by that pattern. Thus,

TABLE 2. BASIC AND TWO ALTERNATE CITY SAMPLES FOR THE CONSUMER PRICE INDEX AND CONSUMER EXPENDITURE SURVEYS

[Years shown for certain cities are those in which expenditure surveys will be conducted there]

Basic sample	Alternate 1	Alternate 2
Stratum A—Cities of 1,250,000 or more population		
Boston, Mass. 1961, 1962 New York, N.Y. 1961, 1962 Philadelphia, Pa. 1961, 1962 Pittsburgh, Pa. 1961, 1962 Cleveland, Ohio 1961, 1962 Detroit, Mich. 1961, 1962 Chicago, Ill. 1961, 1962 St. Louis, Mo. 1961, 1962 Baltimore, Md. 1961, 1962 Washington, D.C. 1961, 1962 San Francisco, Calif. 1961, 1962 Los Angeles, Calif. 1961, 1962	No alternates; the 12 cities in the basic sample are the only ones of this size.	
Stratum B—Cities of 250,000 to 1,250,000		
Hartford, Conn. 1962 Buffalo, N.Y. 1961 Dayton, Ohio 1962 Indianapolis, Ind. 1961 Wichita, Kans. 1962 Atlanta, Ga. 1961 Nashville, Tenn. 1962 Dallas, Tex. 1961 Denver, Colo. 1962 Seattle, Wash. 1961 Honolulu, Hawaii 1962	New Haven, Conn. Dyersburg, Tenn. Russellville, Ark. Paris, Tex. Laramie, Wyo. Modesto, Calif.

¹ Consumer expenditure surveys in the first alternate sample of stratum D cities will be used in deriving CPI weights for smaller cities. However, no pricing will be done in these supplemental cities in subsequent index computation.

² Anchorage will represent Alaska in the revised CPI. The consumer expenditure survey was conducted there in May and June 1960 as part of a special Alaskan price program. These surveys will be used to derive the index weights for the city.

was given the probability of .076 to dispose of the .076 mentioned probability of having two selections in New England. Together, these patterns do, in fact, exhaust the original probabilities. For example, a B stratum city in Connecticut appears in patterns 2, 5, 7, 9, 11, and 12. The probabilities associated with these patterns add to .364, the selection probability for that category.

Sets of patterns for the North Central region, the South, and the West were established in the same manner. An attempt was made to secure additional geographic dispersion by combining patterns for adjacent regions in such a manner as to prevent an undesirable national pattern. For example, patterns for the North Central region and the West were associated so that there was no chance of a national pattern with no selection in Montana-Idaho-Wyoming which also omitted a selection for North Dakota-South Dakota-Nebraska. After patterns were established, the four regional patterns were chosen in a single operation by a random process. Patterns were similarly selected for the two alternate samples.

At this stage, specific cities were determined only where there was but a single city in the selected State-size group (e.g., Denver, the only B city in Colorado-New Mexico). In other cases where only one selection from a State was involved, the sample places were randomly selected from arrays of all primary sampling units in the State-size groups indicated in the selected pattern. In New York, Ohio, and Texas, where there were two

or more sample selections and more than one city in each selected group, a second-stage combination of randomly selected places determined the B and/or C stratum selections, and the D places were randomly selected from arrays for the designated zone of the State.

Two alternate samples were selected in a similar fashion and are shown with the basic sample in table 2. Within each stratum, the cities are arranged by geographic region, and the year shown is that in which the consumer expenditure survey in the city will be conducted, as indicated later. Two cities, Denver and Seattle, are duplicated in the basic and second alternate samples. Since it was intended that all three samples be equally representative, some such duplication was almost unavoidable.

Consumer Expenditure Survey Sample

Analyses of consumer expenditure data from previous surveys indicated a much higher variability in expenditure patterns among small places than among large cities. Consequently, the resources available to supplement the regular CPI sample were allocated to the D stratum, permitting the sample size in this stratum to be doubled (to 32 cities). The 16 additional places were obtained by taking the D cities in the first alternate sample.

Since the consumer expenditure surveys will be conducted in two "waves" (in 1961, covering 1960 expenditures, and in 1962, covering 1961 data), it was necessary to divide the sample into two balanced subsamples, each representative of the U.S. urban population. In the 12 large A cities, surveys will be conducted in both years. The B, C, and D places were alternately assigned to the two subsamples, with a random assignment of the first city in each size group, with the places arrayed in their order of selection (as in table 2). The 16 D cities from the first alternate sample were similarly divided, but with the starting assignment reversed from that used in the D cities of the basic sample, in order to balance each region. Because of the special price program in Alaska, the expenditure survey in Anchorage was conducted in May and June 1960 and, with some adjustment, will serve as the basis for the CPI weights. The Honolulu survey will be made in 1962. Thus, it will not be possible to have balanced representation of Alaska and Hawaii in the 2 years of the

TABLE 3. PERCENT BY WHICH ESTIMATES OF U.S.¹ POPULATION AND RETAIL SALES MADE FROM THE NEW CPI CITY SAMPLE DIFFER FROM ACTUAL FIGURES

Region and city-size group	1950 urban population	1950-58 population change	Retail sales, 1958	Total 1958 population (A-B-C cities)
REGION

Stratum B.....	+0.4	-1.3	+6.3	+1.1
Stratum C.....	-3.2	+12.8	+11.1	+14.1
Stratum D.....	+3.6	-21.2	-13.7	-13.2
United States ³	+0.4	-1.9	(²)	+3.2

¹ 48 States only.

² No difference since all SMSA's in this size group are included in the sample.

³ Less than 0.05 percent.

survey period as is planned for the rest of the United States.

Tests of the CPI Sample

In order to test the effectiveness of the new CPI city sample, data for sample places were used to make estimates of several characteristics for which data were available for the total U.S. urban population. Among these were: 1950 urban population, 1950-58 population change, 1958 retail sales, and total 1958 population (including farm) for the A, B, and C strata. The differences between the actual and estimated data are summarized in table 3. The U.S. estimates are quite accurate, although some regional and city-size sub-totals vary fairly widely from actual figures.

The city "weights" used in the above tests were derived so as to provide unbiased estimates. This required that the weight for each sample city be the reciprocal of that city's original probability of selection. These weights (and an analogous set for the enlarged expenditure survey sample) will be incorporated into the weighting structure for the revised CPI computation procedures and for various estimates of consumer expenditures made from the surveys.

It is not possible to compute an exact sampling error for the design described above. This would generally be true for any design which aimed at maximum geographic dispersion. However, it is believed that an acceptable upper bound to the sampling error can be computed, and experimental work is planned to this end.

1/ The sample areas were grouped by population size in the following strata: A - SMSA's with urban populations of over 1,400,000; B - SMSA's with urban populations of 250,000 to 1,400,000; C - SMSA's with urban populations of 50,000 to 250,000; D - urban places of 2,500 to 50,000. For Strata A, B, and C, each sample area covered the entire urban part of the Standard Metropolitan Statistical Area; Stratum D covered individual urban places in nonmetropolitan areas.

2/ The sample size (i.e., the number of assignment addresses) is the total for each area; for the Stratum A areas for which data were collected for both 1960 and 1961, one-half the sample was surveyed for each year.

3/ The number of complete (usable) schedules obtained and tabulated for each survey year.

4/ Data collected for 1959; the sample size was determined by special use of the data for intercity price comparison. The complete (usable) schedules include only families who had lived in Alaska throughout the survey year. This residency requirement was not applicable in other States. Data for Anchorage were included only in the combined 1960-61 HES tabulations.

Survey of Consumer Expenditures, 1960-61

U.S. DEPARTMENT OF LABOR
Bureau of Labor Statistics
Washington, D. C. 20212

Tables to be used with Supplement J
to BLS Reports 237-89 to 237-93 inclusive.

NOTE: The accompanying distributions of the number of families in the total urban and rural sample of the Survey of Consumer Expenditures in 1960-61 have been prepared for the convenience of users of Supplement J to Consumer Expenditures and Income (BLS Reports 237-89 to 237-93, inclusive). All data in Supplement J have been obtained by combining the individual family reports to the regional and United States levels, with a system of weights based on the 1960 Census of Population. The accompanying tables show the actual number of families in the sample which correspond to the estimated number of families in the universe shown at the beginning of each of the regional and United States tables in Supplement J. Particular care is required in using the averages based on small numbers of families which may differ sharply in their spending patterns.

Tables to be used with Supplement 3
to BLS Reports 237-34 to 237-38 inclusive.

NOTE: The accompanying distributions of the number of families in the urban sample of the Survey of Consumer Expenditures in 1960-61 have been prepared for the convenience of users of Supplement 3 to Consumer Expenditures and Income (BLS Reports 237-34 to 237-38, inclusive). All data in Supplement 3 have been obtained by combining the individual family reports to the regional and United States levels, with a system of weights based on the 1960 Census of Population. The accompanying tables show the actual number of families in the sample which correspond to the estimated number of families in the universe shown at the beginning of each of the regional and United States tables in Supplement 3. Particular care is required in using the averages based on small numbers of families which may differ sharply in their spending patterns.

URBAN. Number of Complete (Usable) Schedules, by Income Class, Family Size, and Region, 1960-61 Combined 1/

Survey of Consumer Expenditures, 1960-61

U.S. DEPARTMENT OF LABOR
Bureau of Labor Statistics
Washington, D.C. 20212

Tables to be used with Supplement 3
to BLS Reports 237-84 to 237-88 inclusive.

NOTE: The accompanying distributions of the number of families in the rural nonfarm sample of the Survey of Consumer Expenditures in 1961 have been prepared for the convenience of users of Supplement 3 to Consumer Expenditures and Income (BLS Reports 237-84 to 237-88, inclusive). All data in Supplement 3 have been obtained by combining the individual family reports to the regional and United States levels, with a system of weights based on the 1960 Census of Population. The accompanying tables show the actual number of families in the sample which correspond to the estimated number of families in the universe shown at the beginning of each of the regional and United States tables in Supplement 3. Particular care is required in using the averages based on small numbers of families which may differ sharply in their spending patterns.

RURAL NONFARM. Number of Complete (Usable) Schedules, by Income Class, Family Size, and Region, 1961

Family size and geographic region	Total	Money income after taxes									
		Under \$1,000	\$1,000-\$1,999	\$2,000-\$2,999	\$3,000-\$3,999	\$4,000-\$4,999	\$5,000-\$5,999	\$6,000-\$7,499	\$7,500-\$9,999	\$10,000-\$14,999	\$15,000 and over

Recreation, reading, education in home city (O)	28
Travel and transportation in home city (P)	30
Expenditures out of home city (Q)	35
Other family expenses (R)	36
Money income (S and T)	37
Personal taxes, personal insurance, occupational expenses, gifts and contributions not deducted from wages and salaries (U)	42
Changes in family assets and liabilities (V and others)	45
Combined expenditures (X)	48

Schedules A and B

A. The reporting unit and eligibility:

Family or consumer unit refers to: (1) a group of 2 or more people usually living together who pooled their income and drew from a common fund for their major items of expense, or (2) a person living alone or in a household with others, but who was financially independent, i.e., his income and expenditures were not pooled. Information was recorded for the family as it existed in the survey year.

1. If they lived in the same household the following were always considered members of the same consumer unit: (a) husband and wife, (b) parent(s) and never-married children (including adopted and stepchildren) regardless of age. Never-married children were not considered financially independent if they lived with their parents, even if they paid room and board and paid for everything else out of their own funds. In most cases the amount of room and board children pay parents is either much less or much greater than the prevailing rate, and in fact they are being supported by or are supporting the family to a large degree. They also normally share the family car and other family resources in a way not typical of unrelated boarders.
2. Persons temporarily away from home were considered part of the consumer unit. This group included: (a) children attending school or college out of the home city, but returning home periodically during the year; (b) a person traveling away from his home city on business, or for pleasure, personal business, or vacation; (c) a person temporarily hospitalized or confined away from home; (d) one who was temporarily on active duty with an armed forces reserve unit or with the National Guard for annual training for periods of 45 days or less.
3. Persons were ineligible for inclusion in the consumer unit for any part of the survey year during which they were:
 - a. Residing in military posts, camps or reservations (unless for periods of 45 days or less for training with the National Guard or reserve units).
 - b. Residing in homes for the aged, jails, asylums, or similar institutions.
 - c. Residing in foreign countries, except for vacations, business trips, or attending school.

4. Eligible consumer units could include both full-year and part-year members, (part-year included infants born during the schedule year, persons who died during the year, a child who married and left the consumer unit during the year, etc.), but must have contained at least one person who for the entire schedule year met the consumer unit eligibility requirements. (A small number of part-year consumer unit schedules were also collected, but only for later experimental use, not for tabulation).

5. The number of possible variations in family composition (the key to determining correct membership of a consumer family in the schedule year) makes it impossible to cover them all here. Suffice to say that specific rules were established to avoid any duplication resulting from scheduling a consumer unit which could possibly have been independently selected for the sample at another address.

B. Survey year: the calendar year January 1 to December 31, immediately preceding the year in which the survey was being conducted.

C. Home city or home area: families were asked to report certain expenditures according to whether they were incurred in the home city (or home area), or away from that city or area (while attending school, working, or on business or pleasure trips). Expenditures out of the home city or area were reported in Section Q of the schedule. The home city or home area was defined as follows:

Urban

1. Standard Metropolitan Statistical Area of 50,000 or more population: the entire urban part of the SMSA.
2. Cities of 2,500-50,000 outside SMSA's: inside the city corporate limits.

Rural: the area containing a family's principal residence, or nearby areas in which the family customarily shopped. Normally the home area would not be large enough to require an overnight stay away from home, in conjunction with shopping.

D. Standard questions: there were four sections designated as Standard Questions, placed at intervals throughout Schedule B. Each contained four questions relating to immediately preceding expenditure sections, and covering:

1. The estimated retail value of items or services received as pay or gifts (except rent or food received as pay). Whenever the estimated value of an item received without cost was not recorded, the sum of \$1.00 was entered, in order to more easily obtain a machine count of all families reporting receipt of the item. As a consequence, averages calculated from totals containing any edited-in \$1.00 figures are in all likelihood, lower than they should be. However, most estimates of the

value of goods and services received without cost provide at best only very rough guides; and should be used with great caution.

2. Family expenditures for items or services given to persons or organizations outside the family, whether paid for in the schedule year or not.
 3. Sale prices for things sold, whether payment was received in the schedule year or not (amounts owed the family for items sold were included in Section V, Changes in Assets and Liabilities, item 3).
 4. Amounts owed by the family at the beginning and end of the schedule year. For items bought on installment, revolving credit, or other deferred payment plans, plus other unpaid bills (including those for food), which were not included in one of Standard Question Sections or in Section V, items 21-26, the amount owed was entered in Section V, item 27(b) and (c).
- Note: Food, etc., received or given as gifts were reported in Section J, items 29 and 30; cars sold were reported in Section P-I, item 25; and real estate sold was reported in Section D-I, item 17.

E. Price and total expense entries:

1. "Price Paid" was the price per unit without sales or excise taxes, shipping charges, installation charges, or tips, and before trade-in allowance. (Prices were only collected for housefurnishings and clothing).
2. "Total Expense" included shipping, handling or delivery fees, installation charges, tips, applicable sales and excise taxes, and was net after trade-in allowance.
3. For discounts and sale prices, the discounted or sale price, was reported in the "Price Paid" column, and that price plus any sales tax and/or other charges, in the "Total Expense" column.
4. Refunds and adjustments. If an article purchased in the schedule year was returned for full refund, no entry was made. If it was retained but a partial adjustment was given, the price less adjustment was entered in the "Total Expense" column, and the price before adjustment under "Price Paid."

F. Special Types of Purchases

1. Credit Purchases: items bought on credit or deferred payment plans were reported in the same manner as cash purchases, even if the items actually might not have been paid for in the survey year. Carrying charges, service charges, etc. were included in "Total Expense" whenever they could be reported for separate items.

2. Purchases for future delivery, including magazine subscriptions, insurance premium, etc. Such expenses were not prorated: the total survey year expenditure was reported, even though the goods or services might have been received over a period extending beyond that year.

3. Deposits on goods for future delivery

a. For goods delivered in the survey year

- (1) For deposits made before the survey year and goods delivered during that year: the amount of the deposit was entered in Section V, item 3, column (b). The total expenditure for the item (including the deposit) was entered in the appropriate section.

- (2) For deposits made in the survey year, payments completed and goods delivered: the total expenditure for the item was entered in the appropriate section.

b. For goods not delivered in the survey year

There were no expenditure entries.

- (1) For deposits made in the survey year and goods not delivered that year, the amount of deposits was entered in V-3, column (c).

- (2) For deposits made in the survey year but forfeited, the amount of deposit was entered in R-4.

4. Repossessions

a. For items purchased in the survey year:

1. If repossession cancelled the debt:

- (a) The total expense was entered as an expenditure.

- (b) The cancelled balance was entered as a receipt from a sale in the appropriate Standard Question.

2. If repossession did not cancel the entire debt:

- (a) The total expense was entered as an expenditure.

- (b) The amount for which the family was still held liable was entered as a debt owed on December 31, in the appropriate Standard Question.

(c) The difference between the purchase price and the sum of: (1) payments made during the year, and (2) the amount for which the family was still held liable on December 31, was entered as receipts from a sale in the appropriate Standard Question.

b. For items purchased before the survey year. There were no expenditure entries.

1. If repossession cancelled the debt:

(a) The debt owed on January 1 was included in the appropriate Standard Question.

(b) The difference between the amount owed January 1, and the total payments during the survey year was entered as receipts from a sale.

2. If repossession did not cancel the entire debt:

(a) The debt owed January 1 and the amount for which the family was still liable on December 31, were included in the appropriate Standard Question.

(b) The difference between the amount owed January 1, and the sum of (1) payments made during the year and (2) the amount for which the family was still liable on December 31, was entered as receipts from a sale.

5. Goods and services withdrawn from business: The retail value of such withdrawals by a self-employed person was reported as an expenditure in the appropriate section.

G. Settlements or payments from property insurance.

If a family received money from an insurance company, or had bills paid by an insurance company for damage, theft, or loss of property, such expenses as were paid for by the insurance were not recorded in the schedule. Any excess of insurance payments over expenses for repairs or replacements was reported in Section T, (money income) item 19. If there was an excess of expenses over insurance payments, the excess was entered in the appropriate expenditure section.

H. Trading Stamps: the value of goods received by a family through redemption of trading stamps was reported as gifts received in the appropriate Standard Question. If a sales tax was paid on the goods, the amount of the tax was entered in Section R, (other family expenses), item 3. If money was received for the stamps, it was reported in Section T, item 19.

- I. Expenditures for gifts: gifts between family members were entered in the appropriate expenditure sections (gifts of clothing were entered in the clothing list of the recipient of the gift). Gifts to persons or organizations outside the consumer unit were handled as follows: 1). Non-money gifts were entered as expenditures in item 2 of the appropriate Standard Question; 2) Gifts of cash were reported in Section U, items 17-23 (Gifts and contributions).
- J. Reimbursements: for the handling of reimbursements, see the discussion in Section P, page 31.

Family Composition and Work Status
Schedule B, Section A.

Section A recorded selected characteristics for each member of the consumer unit.

- A. Column (b), Family head: in husband-wife families, the husband was always considered the head. In other types of families, the person recognized as the head by other family members was so designated.
- B. Item 7, Education: the number of grades completed during or before the survey year, in schools which advanced a person to an elementary or high school diploma or to college, university, or professional school degree. Education beyond four years of college was reported as 17 years, regardless of the actual number of years of graduate work. Study in trade, vocational and similar schools which were not part of the elementary or high school system, was not included in the report of grades completed.
- C. Activity During Survey Year: (items 10 through 17) entries were limited to family members, 14 years old and over, and were based on what the family member considered his major activity (or activities) in the survey year, accounting for all weeks reported in item 8 (in the family). There could be more than one "major" activity if a member's activity changed during the year.
1. Item 10, Working for pay: included paid vacation and paid sick leave. Also included part-time work, if that was the major activity during any period(s) of the year.
 2. Item 17, Other: included persons who were retired, not looking for work, etc.

Housing Pattern
Schedule B, Section B

- I. Section B of the schedule provided information about living arrangements, housing tenure, ownership of other real estate, the value of the housing occupied at the end of the schedule year, and a description of that housing.

II. Item definitions

A. Item 3, Tenure. "Owner" included owner-occupants of cooperative apartments. "Renter" included respondents receiving rent free.

B. Item 9, Other. Included here was combined commercial and residential property.

C. Items 10 and 11, Value of housing unit

Housing unit: A room or rooms occupied or intended for occupancy as separate living quarters by a family or other group of persons living together or by a person living alone. Such living quarters included houses, apartments, rooms, or trailers (on permanent foundations).

To be considered a housing unit, a room or a group of rooms must have had a separate entrance and/or separate cooking equipment.

Separate entrance: occupants could reach their quarters directly through an outside door or common hall, without passing through a room of any other occupant.

Separate cooking equipment: there was available for the exclusive use of the occupants either an installed cook stove or a portable stove (hot plate, rotisserie, electric fry pan, etc.) used for preparing meals.

A room in a house or apartment which had neither a separate entrance or separate cooking equipment was not a housing unit, but was considered a part of the housing unit through which its occupant must pass.

For the purposes of this survey, cabins, trailers, tents, houseboats, or railroad cars which were (1) vacant, or (2) used only occasionally for extra sleeping space or vacation, were not considered housing units.

D. Item 10, Rents paid or rental value. If more than one consumer unit occupied the rented housing unit, the reported figure was that portion of the rent paid by the respondent.

E. Item 11, Market value. The amount for which similar properties in the area sold, or would have sold, on December 31 of the survey year. In a multi-unit structure owned by the respondent, the value applied only to the housing unit occupied by the respondent.

F. Item 12, Type of housing

1. Apartment, flat: a room or rooms with a separate entrance, and with kitchen facilities used regularly for the preparation of meals.
2. Room or rooms: might or might not have a separate entrance. If it did have a separate entrance, it could not have kitchen facilities used regularly for the preparation of meals.
3. Trailer: must have been on a permanent-type foundation (brick, concrete, stone). Mobile trailers (resting on wheels or on temporary foundations such as blocks) were ineligible.

G. Item 13, Number of rooms occupied

1. If there was more than one consumer unit in a housing unit, the entry here was the number of rooms exclusively occupied by the consumer unit reporting, plus a proportion of any shared rooms. Shared rooms were apportioned according to the size of each family in relation to the total number of persons in the dwelling unit.
2. Rooms defined:
 - a. One room: a living room with or without a foyer or pullman kitchen, a dining room, a library, a bedroom, a full-sized kitchen, a permanently enclosed sun porch or a nursery, a combined kitchenette and dinette, etc., each completely separate with four walls to the ceiling.
 - b. One-half room: a small room such as kitchenette, dinette, breakfast nook or dressing room; or other space not completely separated from an adjoining room, and with less than four walls to the ceiling. (In any dwelling unit, two half-rooms were considered one (full) room; single half-rooms were deleted in the editing).
 - c. Ineligible as rooms: bathroom, strip or pullman kitchen, hall or foyer, alcove, open porch, pantry, laundry or utility room, closet or storage space, or rooms not completely finished and not regularly used as living quarters, such as basement, attic, or garage spaces.

H. Item 14, Bathroom facilities

1. Complete: containing a flush toilet, washbowl, and a bathtub and/or shower.
2. Private: available for the exclusive use of the occupants of the housing unit. Might have been shared with other consumer units in the same housing unit, but not with other housing units.
3. Shared: shared with the occupants of other housing units.

I. Item 15, Other private bathroom facilities: referred only to facilities not included in the complete bathrooms in Item 14.

J. Item 19, Air conditioning: housing unit centrally air conditioned, or at least 50% of the housing unit space-cooled by one or more room air conditioners.

K. Item 21: Heating equipment

1. None: no heating equipment, and no flue or other provision for supplying heat to the unit.
2. Centrally installed: a furnace from which hot air, hot water, or steam was piped to the various rooms in the unit or in the structure; or a complete, permanently installed system of electric heat for the unit.
3. Other, installed: circulators, fireplaces, floor furnaces and unit heaters, from which heat was not piped to other rooms in the unit. Also flues available in the unit, with the occupant customarily furnishing his own heating equipment.
4. Other not installed: movable or portable equipment requiring no flue and no special installation.

L. Items 22 through 26, Garage, and services in apartments or rooms: If these were available they were reported, whether or not the respondent used them.

Rented Dwelling
Schedule B, Section C

- I. This section was limited to rent and related expenses for the family's principal place(s) of shelter (restricted, if applicable, to the family's own living quarters within a place of shelter). Rentals of vacation places, college rooms, hotel rooms while traveling, etc. were reported in Section Q (Expenditures out of home city).

A family was classified as renting, if it lived in a rental unit which was part of its own rental property business (see II E, 1a, below). In such cases the family's portion of all housing expenses (Sections D, E, G, etc.) were entered in Section G, items 1 and 2.

II. Item definitions

A. Item 1, Total rent paid

1. Rent as reported here was the total due in the survey year, whether or not paid. It included all payments to the landlord for the right to occupy the housing unit, including fees paid for facilities and/or services furnished, if these were included in the rent.
2. If two or more consumer units shared a housing unit, only the rent actually paid by the family being interviewed was reported.
3. If a consumer unit received rent free, but paid for all or part of specific items of housing expense in lieu of rent, the total survey year expense for these items was entered in item 1.
4. Rents which included board were adjusted, with the estimated expense for board transferred to Section J (Food), item 24. The adjustment was made on the basis of the number of meals per person per week (the column "meals per week" reported the total meals per week for all members of the consumer unit included in the rent). The proportions allocated to rent were as follows:

4-10 meals per person per week:	60%
11-17 meals:	43%
18 or more meals:	33%

- B. Item 2, Repairs, etc. paid for by family: the total of all expenditures for materials and services made by the family to contractors, stores and tradesmen, or to the landlord. If the respondent's rent was reduced because of repairs made, item 1 reported only the rent paid, and item 2 showed the expenses for repairs.

C. Item 3, Special fees, etc., paid to obtain dwelling: usually one-time expenditures over and above rent payments. Did not include refundable deposits paid to the landlord in the survey year (which were reported in Section V, Assets and Liabilities, item 3).

D. Item 4, Amount received from subletting: referred to the sublease of the entire housing unit, not to the rent of one or more rooms.

E. Item 6, Premises used for business or rented to others:

1. Own business: referred to a family-owned business, including a rental property business or rooming-house business.

a. Rental property business: a person was in this business if at any one time in the survey year he had:

1. 5 or more roomers and/or boarders (this is also termed a rooming house business), or

2. 5 or more properties (houses, apartments, stores, etc.) rented or for rent.

b. Family-owned business expense: any part of the expenses for the family's rented dwelling which was chargeable to a family-owned business, was deducted as a business expense in reporting the net income from the business (Section S-II).

2. Rented to others: when part of the family dwelling was rented out to persons outside the family as an apartment(s) or non-residential space. Receipts from such rentals were entered in Section F-II. Space rented to 4 or less roomers (receipts entered in Section F-I) was not considered here.

3. If there were expenses chargeable to premises used for own business or rented to others, adjustments were made in order to compute the family's expenditures for rent applying only to its own living quarters.

F. Items 7 and 8, Rent received as pay.

The value of rent received as pay was classified both as income received and as an expenditure for rent. As an expenditure it was reported separately from any out-of-pocket rental expense which was recorded. (Food received as pay was similarly treated.)

G. Items 9 through 21, Facilities included in the rent:

1. Item 9, Furnishings:

a. None: no furniture, or only a few pieces of furniture, such as a kitchen table or furniture for only one bedroom of a two-bedroom unit, was provided.

- b. Part: provided only the basic articles of furniture for all rooms of the unit.
- c. Full: provided the basic articles of furniture for all rooms of the unit, plus all items of bedding, and cooking and eating utensils.
- 2. Item 11, Refrigerator: rent included a mechanical refrigerator.
- 3. Item 12, Laundry equipment: rent included use of washing machines and/or dryers that were not coin operated.
- 4. Item 13, Air conditioning: rent included the equipment for air conditioning the housing unit, either centrally, or by one or more room air conditioners which cooled at least 50% of the housing unit space. This item did not include the fuel used to operate the air conditioning equipment.
- 5. Item 14, Water:
 - a. None: the respondent paid all of the charges for water and the cost of fuel to heat it (if hot water was available).
 - b. Cold only: the landlord paid all or part of the charges for water, but the respondent paid for the fuel used to heat it.
 - c. Hot and cold: the landlord paid all or part of the charges for water and for fuel used to heat it.
- 6. Items 17, 18, and 19, Gas, electricity and heat: each of these was entered as being included in the rent if the landlord paid all or part of the bill. When only part of the cost was included in the rent, any additional cost to the respondent was entered in the appropriate items in Section G.

Dwelling and Other Real Estate

Owned in the Survey Year

Schedule B, Sections D and E

- I. The data in these Sections fall into two categories: 1) current expenditures for owned homes and/or other owned real estate; and 2) changes in assets and liabilities relating to owned real estate. (Purchase and other expenses for owned house trailers were included in these sections).

- A. Current expenditures: items 23 in Section D-I and 28 in Section D-II, plus Section E-I, listed the current expenditures. These included: taxes due and payable in the survey year, insurance, settlement expenses, interest on mortgages, refinancing charges, repairs and replacements, etc.

B. Changes in assets and liabilities

1. Savings increases (increases in assets and decreases in liabilities). These were listed in Item 21 in Section D-I, item 26 in Section D-II, plus Section E-II. They included: the purchase price, or land and construction costs, of dwellings or other real property bought in the survey year, special assessments, principal payments, expenses for property improvements, etc.
2. Savings decreases (decreases in assets and increases in liabilities). Items 22 in Section D-I, and 27 in D-II, listed savings decreases, including the sale price of dwellings or other real property sold or traded-in during the survey year, mortgage increases, mortgage principal payments received, etc.

II. Section D-I, Property owned, bought or sold in the survey year

A. Recorded here were data concerning the ownership, purchase and sale of all real property owned by the consumer unit, with the exception of property used 100 percent for family business (including rental properties, if the family was in the rental property business).

1. Dwelling occupied earlier in column (c) included properties which may have been vacant (unsold) at the end of the year--whether rented or not during the survey year.
2. Rented to others in column (d) referred to 4 or less such properties. If the respondent had 5 or more properties rented to others, this constituted a "rental property business," not included in Section D. If a dwelling unit was occupied "rent free" by someone outside the consumer unit (a friend, relative, etc.), it was classified as rental property, and all current expenditures paid by the respondent including utilities and other housing costs, were entered in items 3, 5 or 6 in Section F-II. This resulted in negative (loss of) income from this property.
3. Other property in column (d) included unimproved land, unoccupied property (including building lots), structures under construction or renovation in the survey year, or commercial property not used for family business.

B. Property owned at any time in survey year.

1. Item 1, Year bought: the entry for property acquired by gift or inheritance was the year ownership was assumed by the family. If the dwelling was built on land acquired in an earlier year, the entry was the year the dwelling was completed for occupancy.

2. Item 2, Months occupied: for usual place of residence, this included time the family was temporarily away from home; for a vacation dwelling, it referred to the time the consumer unit actually lived in the dwelling.
3. Item 3, Property tax due and payable in survey year: entered here whether paid or not. The tax was payable if the penalty date (the deadline for paying taxes without incurring a penalty) fell in the survey year.
4. Item 7, Property insurance: the entry was the actual amount of premium paid during the survey year, even if it covered more than one year.
 - a. Item 7(a) referred to fire or fire and extended coverage (including coverage for theft, windstorm, flood, vandalism, etc.).
 - b. Item 7(b): a comprehensive policy usually included some liability insurance.
 - c. Premiums on mortgage retirement (life) insurance were not reported in item 7, but in Section D-II, item 14.
5. Item 8, Special assessments: the amount paid during the schedule year for curbs and gutters, sidewalks, storm sewers, street lights, street paving, water systems, etc.
6. Item 9, Ground rent: rent paid for land owned by someone other than the owner of the structure which was situated on that land. Also reported here was rental expense for the space on which an owner-occupied trailer was located.
7. Item 10, Other expenses: such expenses as mortgage service charges, premiums for FHA mortgage guarantee insurance, etc. This item did not include expenses for maintenance and repairs, which were reported in Section E-I.
 - a. Mortgage guarantee insurance is coverage to guarantee the payment to the lender of the mortgage balance in the event the borrower defaults. All FHA mortgages contain this insurance, and it is sometimes offered with other types of home mortgages.
8. Item 11, Business use or rented to others. For a discussion of the general procedures involved in computing a family's current housing expenditures, applying only to its own living quarters, see Rented Dwelling II, E, page 11.

C. Property bought in the survey year.

1. Item 13, Purchase price: the sales contract price, or the total expenditures in the survey year for land and/or construction. (D-I, column (b) was limited to dwellings occupied at the end of the survey year. If a dwelling was still under construction and/or unoccupied at the end of that year, it was reported on column (d)). The cost of improvements and repairs made at the time of purchase were not included, unless paid for by the seller and included in the purchase price.
2. Item 14, Cash down payment. If a property was traded in, the amount of the trade-in allowance was reported. If both trade-in and cash were involved, the total amount of the down payment, including the value of the trade-in, was given.
3. Item 15, Settlement charges: this item was limited to mortgage placement finders fee, title search, title guarantee, payment of escrow, recording fees, and tax stamps.

D. Property sold or traded-in during the survey year.

1. Item 18, Sale price: gross sale price, or trade-in allowance.
2. Item 19, Seller's settlement costs: usually fees for the preparation of a deed and other legal expenses.
3. Item 20, Commission: also included here were expenditures for advertising, signs, and other expenses incidental to the sale and paid by the respondent.

III. Section D-II Mortgage information (For property reported in Section D-I, including the financed purchase of trailers. Included were many types of mortgages and trusts, all of which could be defined as loans secured by a home or other real property.)

A. Descriptive data

1. Item 2, Year obtained: the year the respondent obtained or assumed the mortgage, or, for a refinanced mortgage, the year of refinancing.
2. Item 3, New or assumed: a new mortgage referred to one negotiated at the time of purchase, or to a refinanced mortgage. An assumed mortgage was one in existence prior to purchase by the respondent, and taken over from the former owner.
3. Item 4, Years to run: the number of years from the time of issue (or refinancing), or when assumed, until the mortgage would be paid up.

4. Item 5, Amount: the amount of a new (or refinanced) mortgage, or, for an assumed mortgage, the unpaid balance when taken over. If the mortgage was discounted, this figure was the amount received by the family at the time the loan was made.
5. Item 6, Rate of interest: excluded any FHA (or other) mortgage guarantee fee (which is reported in Section D-I, item 10).

B. Breakdown of Mortgage Payments

1. Item 14, Mortgage insurance (life): Insurance on the life of the mortgagor, designed to retire the mortgage in the event of his death before it was paid. This item was classified as personal insurance, and included with similar insurance in Section U.
2. Item 15, Refinancing charges: also included penalty charges paid for reducing or paying off a mortgage ahead of schedule (when not in connection with the sale of the property).

Note: When a mortgage was refinanced in the survey year, the terms reported were those of the latest mortgage, but expenses and debt figures included both the latest mortgage and the mortgage prior to refinancing...

C. Property sold or traded-in in survey year

1. Item 22, Penalty: if the purchaser obtained a new mortgage or paid cash for the property, the respondent (i.e., the seller) might have paid a penalty to retire his mortgage.

IV. Section E, Owner expenses for repairs, replacements and improvements in the survey year.

A. General information

1. Columns (b) and (c) were divided into two categories:
 - a. Contracted out: either the total job contracted out, or the respondent buying the materials and hiring individuals to do the work for him. Total expense included both labor and materials.
 - b. Done by FM (family member), or with unpaid labor: here the total expense was limited to the cost of materials and supplies.
2. Included in the expenditures for both E-I and E-II were the purchase or rental of tools and equipment for the particular job(s) reported. Tools and equipment purchased for general use were reported in Section H, item 19.

Telephone, Fuel, Light, Refrigeration, Water
Schedule B, Section G

I. A. Section G covered total expenditures for the above items, with the exception of the following:

1. Expenses chargeable to a respondent's business or profession. (when used in S-II, or reimbursed; if not own business, and not reimbursed they would be reported in G).
2. Expenses paid on rental property which were reported in Section F-II, item 3.
3. Utility fees paid by tenants to the landlord as part of their regular rent (included in Section C).

B. See Rented Dwelling (II G6); page 12, for the procedures which were followed (including entries in Section G), when a tenant was required to pay for utility fees above a certain minimum which was included in the rent.

II. Item definitions

Item 13, Sewage charges or septic tank cleaning. Special assessments for installation, maintenance or repair of a sewage system, or the costs of installing, repairing or improving septic tanks were reported in Sections D or E.

Miscellaneous Household Expenses
Schedule B, Section H

This section covered those miscellaneous items of household expenses not included in Sections C through G.

1. Item 4, Launderettes or coin operated machines: included extra charges for (1) soap, bleach, bluing, etc.; (2) use of dryers or ironers.
2. Item 5, Wages and social security payments: Included gifts of money over and above wages. (Wages paid for home nursing were reported in Section M-II (Medical Care) item 24).
 - a. 5a, Household help: included general day workers, maids, cooks, chauffeurs, and laundresses working in the household.
 - b. 5b, Gardners and grass cutters: Did not include charges for landscapers.
 - c. 5d, Other wages: Included tips to apartment house janitors, doormen, or others not directly employed by the family.
Tips in restaurants were reported in Section J (Food), item 25.
3. Item 6, Day nurseries, child care services: did not include fees for kindergarten (reported in Section O, item 39, Education).
4. Item 7, Reupholstery and furniture repair: did not include the cost of fabrics and labor for slipcovers, which were in Section I (Housefurnishing).
5. Item 8, Equipment repair and service charges: for major and minor household appliances, but excluded the repair and service of radios, television sets, and musical instruments, reported in Section I, and classified as part of Recreation (Section O).
6. Item 9, Moving expenses: all expenses for services involved in moving from one housing unit to another. These included packing costs, special insurance fees, freight and drayage charges, etc.
7. Item 10, Other freight and express charges: included transportation, special packing charges and insurance costs for the shipping of all household articles, except in connection with parcel post or moving from one housing unit to another.
8. Item 11, Storage charges: storage fees for furs and clothes are recorded in Section L (Clothing services).
9. Item 12, Stamps and other postage: included expense for postal insurance fees. Excluded stamps purchased as a hobby, which were entered in Section O (Recreation).

B. Section E-I, Repairs, replacements and maintenance: These items included all work which maintained or restored the original good condition of a property, such as painting, wall papering, floor finishings, replacement of a hot water heater, conversion of a heating unit. Such work usually did not add substantially to the value of the property, even though better equipment and materials may have been used.

1. Item 10: Did not include such non-permanent items as removable canvas awnings and small adjustable screens, which were reported in Section I.
2. Item 11, Termite protection: exterminator's fees and charges, and termite insurance. Did not include expenses for repairing termite damage, which were reported under the applicable items in this section.
3. Item 14, Business use or rented to others.
See Rented Dwelling II E, page 11.

C. Section E-II, Improvements. These included all work that added substantially to the value of a property, such as the addition of a room or wing, finishing of basement or attic space, erection of a new fence where none had previously existed, etc.

1. Item 1: reported here were expenses for completing areas which had not been finished, such as attic, garage or basement space.
2. Item 2: limited to expenses for adding to the structure space which had not previously existed.
3. Item 3: expenses for structural alterations to existing family living space, such as removal of a porch or wing, inside removal or installation of walls or partitions, dividing or relocation of rooms and facilities, etc.

Receipts from Roomers and Boarders,
and from Rental Properties
Schedule B, Section F

- I. This section reported income from roomers, boarders, and real estate rentals. It was not used if the respondent was in the rental property or rooming house business (see E 1a, page 11; net income from such businesses was reported in Section S-II.)

II. Section F-I, Receipts from Roomers and Boarders

A. Payments to the family for room or board by children or by other relatives who were members of the consumer unit were not included here.

B. Item 1, Room and board, column (e)

This item was adjusted to remove the estimated cost of food, which was also subtracted from Section J, item 23 (total at-home expenditures). The proportion of total receipts to be allocated to room(s) was estimated on the basis of the average number of meals per roomer per week, as follows:

1. An average of 1-10 meals received: 70% to rooms

2. 11-17 meals: 60% to rooms

3. 18 or more meals: 50% to rooms

C. Item 2, Board only, column (e)

This figure was adjusted to remove the estimated cost of food, with 25% of the total receipts remaining in F-I, and 75% being subtracted from Section J, item 23.

III. Section F-II, Rents received from real estate

A. Item 4: This was a check question. If the entry in 7(f) exceeded that in 4(f) by more than 15%, a check was made to see if the amounts transferred from Sections C, D, and E were reasonable.

B. Item 5, Current expenses: Also included here were amounts transferred from Section C, item 5, if the rental cost in that section had been adjusted because of premises rented to others.

C. Item 7, Net rent: This item equalled item 1 minus the sum of items 3, 5, and 6, and could be a negative figure, indicating a loss.

10. Item 13, Stationery, etc.: did not include school supplies, which were in Section Q (Education).
11. Item 14, Holiday decorations: included decorations and ornaments only not the paper supplies, etc., used on these occasions, which were reported in Section J, item 12.
12. Item 16, Fresh flowers and plants: referred to house plants and fresh flowers bought by family members for the house or for another member of the consumer unit.
13. Item 17, Seeds fertilizers, sprays, etc.: reported here were expenditures for home gardening supplies other than those used for raising food (the latter were reported in Section J, item 33). The cost of landscaping and putting in new trees and shrubs was recorded in Section E-II (Improvements), item 5.
14. Items 18 through 21, These items were classified as part of "Miscellaneous Items" in Section I.
Housefurnishings and Equipment
Schedule B, Section I.

I. All items reported in the subsection "Television, radio, musical instruments" were classified for inclusion in Section O, Recreation.

II. Item definitions

- A. Items 59 and 62 vs. items 67 and 68, Household textiles: for custom-made items, if charges for materials and labor were not reported separately, they were entered in item 59 (or 62); otherwise material was entered in item 67 and labor charges in item 68.
- B. Item 96, Insurance (personal property): if the respondent had a "Homeowner's" policy, the personal property coverage was probably included in the premium reported in Section D-I, item 7(b).
- C. Item 99, Inventory on year acquired: covers acquisition by purchase, gift, or inheritance. (These data were used in deriving the CPI weights. They can provide (in conjunction with information on current purchases) a basis for estimating annual replacement rates, when setting up standard family budgets, etc.)

Food and Alcoholic Beverages, Cleaning Supplies,
Paper, Personal Care Supplies, and Tobacco..
Schedule B, Section J, and Schedule C

I. Schedule B, Section J.

- A. Although food is the largest expenditure category for most families, the total annual cost is made up of numerous purchases (generally for cash) which are difficult to recall, and for which records are incomplete. The situation is further complicated by the fact that non-food items are often purchased along with food.

The primary purpose of Section J was to obtain the best possible estimates of annual family expenditures for food. To this end the section was designed to try to prevent omissions of food items which were not part of major food purchases, and to eliminate non-food items from the estimates. Respondents were queried both about grocery store and other food expenditures, the latter by type of food and source. To eliminate non-food items from grocery store purchases, the section also obtained information, by type of outlet or vendor, on purchases of selected household and personal care supplies, tobacco, and alcoholic beverages - the non-food items most likely to be available in grocery stores.

Annual food at home (or carried from home) expenditures were built up from the respondents' estimates of their average expenses for a week, month, or other period. Not only were they asked for these average expenditures, but they were queried about seasonal variations in their expenses. The total estimated expenditure for "home" food was arrived at in the following manner:

Food purchases (grocery store, outside groceries,
bulk, and carry out shops or the like)

minus Non-food items bought in grocery stores, and food
served boarders.

plus or minus Any indicated seasonal variations in food expense
reported by the respondent

- B. Food, meals and alcoholic beverages: Section J expenditures for these items were limited to those made in the home city. The remaining items in Section J were not limited to home city purchases.

1. Items 3 and 4, Meals received as pay: the value of meals received as pay was classified both as income received (Section S-I, wages and salaries), and as an expenditure for food. In the latter category it was reported separately from any out-of-pocket expenses for food.

2. Item 6: the average amount spent at the grocery store included both food and non-food items.
3. Item 7: for expenditures not (or not entirely) included in item 6, item 7 was filled in. "Source of purchase" was the type of outlet or vendor.
4. Items 9 through 17: for items checked "yes", there could have been entries both for grocery store and other store purchases.
5. Items 25(c) and (d), Food away from home in home city. These items included the expenditures of family members for meals and alcoholic beverages for persons not members of the consumer unit (friends, guests, relatives, etc.). They also included tips and gratuities.
6. Item 28, Food through public or private assistance. Reported here was the value of food or food vouchers, but not public assistance cash grants used to buy food, which were reported in Section T, Item 13.
7. Item 32, Food raised for family use: the estimated retail value of such food raised in the survey year, whether consumed fresh by the family, or preserved in freezers or jars for later home consumption.
8. Item 36, Last purchase
 - a. This item provides information for use in attempting to circumvent intentional respondent bias which took the form of underreporting a few expenditure items, notably alcoholic beverages. "Last purchase" questions tend to minimize the psychological factors which result in under-reports. For the items involved, the data can be used to calculate an independent estimate of the average expenditures per family during the survey year. ^{1/}
 - b. It should be noted that for the "last purchase" items on the schedule, the average expenditures reported in the regular BLS tabulations are based on the reported annual expenditures without adjustment for underreporting. This followed the BLS policy for all statistical summarization, of not incorporating adjustments of this sort into the basic tabulations.

^{1/} For further discussion of this technique, see: Lamale, Helen H., "Methodology of the Survey of Consumer Expenditures in 1950", University of Pennsylvania, 1959, pp 137-141.

118

D. The non-food items in this section were classified separately, or as part of other schedule sections, as follows:

1. Item 10-12, Laundry, cleaning and paper supplies: included as part of household operation, Section H.
2. Item 13, Pet food: included with hobbies, in recreation, Section O.
3. Items 14 and 15; Tobacco and alcoholic beverages: each an independent expenditure subgroup.
4. Item 16, Personal care supplies: included with Personal care services, Section N.
5. Item 33, Supplies for raising food: included in Section R, Other family expenses.
6. Item 35, Income from the sale of home produced food: classified as Other money income, Section T.

II. Schedule C, Food and Beverages, Personal Care and Household Supplies and Tobacco Items Purchased in a 7-Day Period

A. Section J of Schedule B gave a summary of the family's purchases of food and related items for the entire survey year. Detailed information about purchases of these items in a 7-day period subsequent to the survey year were reported in Schedule C.

1. Schedule C was filled only for "housekeeping units", that is, for those consumer units in which at the time of the interview, at least one family member regularly ate 10 or more meals a week at home or carried from home.
2. Recorded in Schedule C were only those items which the family purchased in the 7-day period immediately preceding the day of the interview. Included were items purchased or delivered in the 7-day period, whether or not they were actually paid for in that period.

- B.
1. Section I, Column (g), Number of Meals: included meals carried from home, such as lunches for school or work.
 2. Section I, Column (h) through (j): the number of meals not eaten from family food supplies.

3. Section I, Columns (1) through (0), Expenditures for food and alcoholic beverages away from home: did not include the cost of any food or beverages taken from the family supplies, even if eaten away from home. Column (0) reported expenditures for between-meal snacks only. Items purchased along with a meal, or to supplement a meal carried from home were reported in Column (1).

C. Sections II and III, Column (g), Amount spent: sales tax was excluded, but other taxes (such as those on alcoholic beverages and on some items in Section III) were included.

Personal Care Schedule B, Sections J (item 16) and N

As indicated in the preceding section, Personal Care expenditures for the survey year included both personal care supplies, reported in Section J, item 16, and personal care services, the subject of Section N.

1. Supplies included such items as toilet soap, razor blades, face powder, etc.
2. Services were received at barber shops, beauty shops, health clubs, etc. The following definitions apply as indicated:
Item 6, Other care of hair and scalp: expenditures at hair and scalp clinics, but not treatments by medical doctors.
Item 9, Other personal care services: might include charges for health club services, such as steam room, body conditioning, and similar treatment, but not dues to athletic clubs, YMCA, etc., which were reported in Section O, item 5.

Clothing Purchases and Services

Schedule B, Sections K and L

- I. Section K reported survey year purchases of clothing separately for each family member, while Section L gave family expenditures for clothingupkeep, yard goods, and notions. The sex-age groups used in Section K were for the purpose of listing more meaningful types of clothing for each of the broad classes covered; they were not necessarily intended for classification purposes. The clothing data are available for tabulation with the sex and specific age of each respondent indicated, so that any groupings desired may be set up. (There are, additionally, codes for certain age classes, as indicated in the Classification Code Manual, Attachment 9).

II. Item definitions

- A. Expenses for custom-made garments were reported in the appropriate item in Section K, unless materials were bought separately and taken to a tailor or dressmaker to be made up. In such cases, expenses for materials were reported in Section L, items 1 through 7, and the tailor's or dressmaker's charges in Section L, item 27.
- B. The cost of alterations on a new item of clothing was included in the total expense figure for that item. Expenses for alterations on clothing already owned or received as a gift were reported in Section L, item 28.

Medical Care Schedule B, Section M

I. The medical data fell into two main categories:

- A. Health insurance: a description of the voluntary health and medical care plans which the families had, including types of coverage, costs, and benefits received in the survey year.
- B. All medical expenses in the survey year (for in-hospital care and any other medical costs) which were not covered by the plans or policies reported under health insurance.

II. Section M-I, Health Insurance

- A. Item 1. Coverage under Workman's Compensation, or Medicare, (see definition in III B, below), or eligibility for care as a veteran were not considered as coverage by health insurance.
- B. Health insurance plans were grouped into three categories, mainly for reporting convenience, as follows:
 - 1. Item 2. Single or limited purpose coverage, such as polio, cancer, or school accident policies.
 - 2. Item 3, Independent plans (on the schedule listed as "care in a health center"). Such plans are termed "independent" because they are not associated with each other, or with commercial insurance, Blue Cross, or Blue Shield plans.

Included in the independent category are plans sponsored by community, consumer, employer and employee, private group clinic, fraternal, or union groups, etc. The plans vary widely in the scope of their benefits, with some providing a very broad range of services, and others limited to a single type of service.

3. Items 4 through 8. These items were limited to general health insurance policies (also called commercial insurance policies), which include:

a. Service plans, typically offered by associations like Blue Cross or Blue Shield which have contracts with doctors and hospitals. In such plans the benefit is paid directly to the provider of care, for services rendered.

b. Indemnity plans, typically offered by insurance companies. Here the policy holder is reimbursed after he has paid the medical costs involved.

C. Items 2(b) and 3(b) Expenses for Limited or Independent Plan Policies. If an employer paid all or part of the expense for these types of policies, the amount paid by the employer was reported separately in Standard Question IV-1(g), since neither Section M-I-8 or Standard Question III-1(a) was applicable for reporting employer contributions to such plans.

D. Item 4: Coverage of general health policies

1. Hospitalization: the use of a hospital bed and the service connected with it (food, general nursing care, etc.).

2. Surgical services: special service insurance usually pays all or part of the doctor's or surgeon's bill for an operation, whether performed in the hospital or in the doctor's office. This also usually includes the cost of visits to a doctor's office for post operative care.

3. Other physicians' services: office or home calls, and other physicians' services not connected with hospitalization or surgical care.

4. Major medical insurance: "extended benefit" contracts not only covering the costs of hospital and physicians' services, but also such expenses as those for special nursing, drugs, orthopedic appliances, visiting nurse service, nursing-home care, etc. The contracts are usually written with a deductible clause (the first \$50, \$100, or \$150, etc., to be paid by the family member, with the rest of the bill paid by the insurance).

E. Items 2(b), 3(b), and 7(b). If a combined figure was reported for health insurance and union dues, 50% was allocated to insurance, and 50% to dues.

F. Item 10. Services and benefits received

1. The dollar amounts in 10(a) through (f) were the actual (or estimated) costs of the medical care received. They did not include any excess of benefit payments over cost, which was reported in 10(g).
2. Death benefits associated with general health insurance policies were treated as settlements on life insurance, and entered in Section V, Item 4.
3. Benefits listed in Item 5 were not included in Item 10. Disability income was reported in Section T, Item 16, and disability benefits in Section T, Item 19.

III. Standard Questions apply to Medical Care (Standard Questions-III).

- A. "Medical care from company doctors, clinics or hospitals", Item 1(a), did not refer to health insurance paid by the employer, but meant free medical care received from the sources listed.
- B. "Medicare" in Item 1(b) referred to the armed forces medical care for military personnel dependents.

Recreation, Reading and Education in Home City
Schedule B, Section O

- I. This section was limited to the above types of expenditures in the home city. Out-of-home-city expenses for these categories were reported in Section Q. Expenditures for television, radio and musical instruments (reported in Section I) were classified as part of recreation expenses.

II. Item definitions

A. Recreation

1. Items 1 through 4, Spectator admissions: included admissions paid by a family member for persons outside the consumer unit. (This was an exception to the general rule for gifts to such persons).
2. Item 9: included golf clubs, ski equipment, etc.; but not clothing. Did not include expenditures for bicycles, boats, motorcycles, motor scooters, etc., which were reported in Section P III (Other transportation).

3. Item 11, Other club dues and memberships: Included civic, fraternal and service club dues and membership fees paid by family members. It did not include business expenditures for dues made in connection with a profession or an unincorporated business reported in Section S-II. Nor did it include business and professional association dues reported as occupational expense in Section U.

4. Items 12 through 18, Hobbies: included all expenses incurred primarily in pursuance of a hobby (craft materials, club dues, instructions, publications, etc.)

B. Reading

1. Item 31, Magazines: Total expenditures in the survey year for single copies or subscriptions were reported here. The cost was not apportioned for copies received or subscriptions paid in other than the survey year.

C. Education

1. Items 39, 41, and 43, Other school levels: included business or secretarial schools, technical and trade schools, private day schools, schools for the handicapped, etc., but not child care centers and day nurseries for pre-school children; which were reported in Section H, (Miscellaneous household expenses), item 6. Note: "school" for these entries is not limited to elementary or high school, or colleges or universities, as was "education" reported in Section A.

2. Scholarships (in or out of the home city)

a. If any family members received cash scholarships, they were reported in Section T, item 19 (Other money received), and all family expenses for education, including those paid for by the scholarships were reported in Sections O and/or Q.

b. If all or part of a family member's education expense was paid by a non-cash scholarship (credited to the student's bill without his ever receiving the money), the expenses covered by the scholarship were considered to be the value of gifts received by the family and were entered as follows:

(1) If the family member attended school in the home city:

(a) the value of room in Standard Question I, item 1(a); board in Section J, item 29(a) (if the family member was living and taking meals away from home).

(b) The value of tuition and books in Standard Question III, item 1(f).

(2) If the family member attended school outside the home city:

(a) The value of room and board in Standard Question IV, item 1(f)

(b) The value of tuition and books in Standard Question III, item 1(f).

c. The family's actual education expenses (those not covered by a scholarship) were entered in the appropriate expenditure sections of the schedule. For example, tuition or books in Section O (if in home city), or Section Q (if not of home city); transportation expense in Section P (if in home city), or Section Q (if out of home city).

3. Item 44, Music lessons, dancing lessons, etc.: This item also included lessons for sports, cooking, sewing, driving, etc.

Travel and Transportation
Schedule Section P

I. This section included all transportation expenditures in the home city, and those out-of-city expenditures not reported on Section Q. It was divided into the following parts:

A. Section P-I, Automobile expenses: included the purchase, sale and operating expenses of automobiles, station wagons and trucks owned at any time in the survey year. The primary purpose of this section was to obtain information about vehicles used entirely or partially for family transportation. Only a limited amount of information was requested in Section P for vehicles used exclusively for business.

B. Section P-II, Expenses for local transportation in home city: provided for reporting expenses for travel within the city and nearby areas in public conveyances or private cars not owned by a member of the consumer unit.

C. Section P-III, Other transportation expenses not report in Section Q: other miscellaneous expenses connected with transportation within the survey area.

II. Section P-I, Automobile expenses in the survey year

A. Description of cars owned

1. Items 2 and 3, Make of car: name of manufacturer or brand name, for each car owned by any member of the family.

2. Item 5, Series: model designation, for example: Impala, Fairlane, Savoy, Bonneville, etc.

B. Use of car(s)

1. Item 12, Business purposes: driving to and from work, even with contributing car pool passengers, was not considered a business purpose. The reimbursement from a car pool was entered in item 51(c).

2. Item 13, Car used for business

a. If a family member owned a car that was used 100% for his own business, all of the costs of owning and operating the car were business expenses, and were deducted in calculating net income from business in Section S-II. No business expense was reported in Section P.

b. If a car was used 100% for a non-owned business (one from which wage or salary income was reported in Section S-I), the entire cost of owning and operating the car, less any reimbursements, was entered in Section U, item 28 (other occupational expenses). None of the expense was reported in Section P.

c. If a car was used less than 100% either for an owned or non-owned business, the total expenses for all cars (column c) was adjusted to report in Section P only the family cost for the car(s). However, individual car data in column (b) were not adjusted and include business expenses.

(1) Item 51 (a) and (b), Reimbursement: if the respondent used the car for a non-owned business, Item 51 reported whether or not he was reimbursed for any of the business use, either by an employer or a sponsoring organization (e.g., union).

(a) If there was no reimbursement, the purchase and operating expenses chargeable to business use were transferred to Section U, item 28.

(b) Where there was reimbursement: if the reimbursement equalled the expenses chargeable to business use, these expenses were removed from the schedule. If reimbursement was less than the expenses chargeable to business use, the difference was entered in Section U, item 28. If reimbursement was greater than the expenses chargeable to business use, the difference was transferred to Section S-I, item 6 (total wages or salary).

3. Item 51(c), Reimbursement from car pools and sharing of car: the amount entered in 51(c) was transferred to Section T, item 17, (other money income).
- C. Items 14 through 20, Car(s) purchased in the survey year: these items apply only to a car or cars purchased by a family member during the survey year.
1. Item 14, Total purchase price: this figure was before trade-in allowance and included financing charges, as well as title fee, excise and sales taxes, and any extra equipment bought at the time of purchase. If it also included registration fees and/or insurance, they were deducted from items 14 and 16, and transferred to PI, 44 or 45 (insurance and fees).
 2. Item 17(c), Financing charges: if financing charges were included in item 14, but not reported separately in item 17(c), they were estimated on the assumption that the car was financed at a rate of 13 percent per year.
 3. Item 18, Discount or reduction: if extra equipment was given in lieu of a discount, its value was entered here, as well as any cash discount.
 4. Item 20, Number of time payments: the total number of payments to be made after the down payment.
- D. Items 21 through 24, Car(s) on which time payments were made in the survey year: these items applied to any car on which time payments were made in the survey year, whether bought that year or earlier.
1. Item 23, Other payments: entered here were the total of lump-sum payments made in the survey year, other than regular payments or cash down payments. If a car with debt was traded in during the year and the debt entirely paid off at the time of trade-in, the lump sum payment was entered here. (If the debt was not entirely paid off, but "cancelled" so title could pass, and then re-financed, the unpaid balance appeared as part of the total debt (items 20 and 22), but was not included in the purchase price. The trade-in value (item 15) in this case was the total amount allowed before adjustment was made for the unpaid balance).
- E. Items 25 and 26, Cars sold in the survey year. As collected in the field these items applied only to a car sold outright, not to one traded-in for another car. However, whenever a car was sold and another purchased, the cash sale was considered a "trade-in allowance," and the figure in item 25 (less item 26) was transferred to item 15 on the schedule, if all of the following conditions held true:

1. There was no trade-in already reported for the car purchased in the schedule year.
2. The price of the car sold, (less item 26) was less than the price of the car bought.
3. The transaction on item 25 was a sale and not a repossession.

If two cars were sold, and one car purchased, only the larger of the two sale prices was transferred to item 15. ("Sale price" was the net price, or the price received less any selling expense such as newspaper advertising, commission to a dealer for selling, etc.)

F. Items 27 through 37, Car operating expenses

1. Items 27 and 28, Gasoline and oil: included Federal and State taxes. If a combined expenditure for gasoline and oil was reported, 91% was allocated to gasoline and 9% to oil.

2. Items 32 through 34, Tires and batteries: expense less any trade-in allowance for old tires or batteries. Included excise and sales taxes. Tire repair expenses were included in item 33.

G. Items 38 through 43, Expenditures for repairs and parts not covered by insurance. Reported here were all expenses for repair of family-owned automobiles which were not covered by insurance, including the amount paid by the family when insurance did not cover the full bill. (Repair expenses covered by insurance were not reported anywhere in the schedule; any surplus of insurance payment over actual expense was reported in T-19 (other money receipts). Any expenses for repair of damage to someone else's car not paid by insurance is in Section P-1, item 49.)

H. Items 44 through 46, Insurance and fees

1. Item 44, Insurance: Recorded here were only those premiums paid in the survey year (this is the same procedure as that used in Section D-1 (owned real estate) in reporting property insurance, and in Section O (reading) for magazine subscriptions).
 - a. If a respondent owned a car for part of the survey year and paid insurance on it during that time, but later in the year traded it in for another car, the total premium on the first car was reported for that car. If changing cars resulted in an additional premium, this was the only insurance cost reported for the second car.

2. Item 45, Fees and taxes

a. If automobile registration was reported as part of a personal property tax in Section U, item 4, the cost of such registration was estimated, using State and local registration fee information, and the amount transferred from Section U to P-I item 45.

b. Car inspection fees: for tests to determine if brakes, light, horn, etc., met safety standards.

III. Section P-II, Expenses for local transportation in home city

A. Column (c), Purpose of travel: if a trip served more than one purpose, it was classified under its major purpose; if two or more purposes were of equal importance, the number of rides was split between them.

B. Column (d), Number of rides: referred to single rides, not round trips.

C. Item 1, Streetcar, bus, subway, etc.: included commuter transportation, by train, bus, boat, etc.

D. If a family member paid for the rides of guest outside the family, this expense was recorded with the family member's expenses (as was done for spectator admissions in Section O).

IV. Section P-III, Other transportation expenses not reported in Section Q.

A. Items 4-7: although such items as boats, bicycles, or airplanes may have been used for recreation only, they were entered here as transportation, rather than in Section O (recreation). The same is true in Section Q.

Expenditures and Reimbursements for Family Members Temporarily
out of the Home City at any Time in the Survey Year
Schedule B, Section Q

- I. A. Since the pattern of living expenses for people who are traveling usually differs considerably from the pattern of their expenditures at home, this section reported on those costs most likely to be substantially different when a person was temporarily away from home.

However, each of the six specific groups of expenditures listed in this section (transportation, lodging, food, drink, recreation, and school expenses) was classified as a subgroup (out-of-home-city expenses) of the corresponding regular expenditure section. The seventh group (combined and other expenses), was classified as a part of miscellaneous family expenses.

B. Location of entries

1. If a family vacationed in rented living quarters within the survey area, the rental expenses incurred during the period were reported in this section, since the vacation quarters were not the primary residence. Also reported here would be any other vacation expenses (e.g., for recreation). However, food expenditures for the period were reported as "in home-city" purchases in Section J, on the theory that they probably did not vary much, if any, from the normal level of home expenditures.
2. Item 15, Provisions: if food was purchased in the home city and taken along on a trip out of the area, the expense for the food bought in the home city was reported in Section J, for the same reason as given above.
3. Item 8, Rented Car: if a car for an out-of-town trip was rented and filled with gas in the home city, the rental fee and cost of gas were entered here, since the trip was out of the area.

II. Item definitions

A. Item 2, Purpose of absence: work

1. Code 4 was used when the family member's regular place of employment was outside the home city. Such persons might have been daily commuters, or they might have stayed away from home several days or weeks at a time. Persons who traveled occasionally or irregularly on business, but whose place of employment was in the home city, were not included here.
2. The number of days away from home (item 3) for persons employed outside the home city was restricted to those days on which they did not return home after work.

- B. Item 18, Admissions: any admissions paid by a family member for guests (Persons outside the consumer unit) were included here, as was done in Section O (Recreation - See O-II-A1).
- C. Items 21 through 24, School expenses: see the discussion on handling expenses covered by a scholarship, page 29.
- D. Reimbursements and Occupational Expenses
1. If an item was paid directly by the employer or sponsoring organization, with the family member neither paying any money nor receiving any repayment, it was not reported anywhere in the schedule.
 2. Reimbursements for the operation of a family member's own car were not reported here, but in Section P-I, item 51.
 3. For the handling of reimbursements, see the discussion in Section P-I, page 30.
 4. For business trips made by family members who were self-employed, only personal expenses were entered in Section Q. Business expenses were deducted in Section S-II.
 5. If the place of employment was out of the home city, meals eaten while away from the home city were not considered as an occupational expense, unless some reimbursement was made for them.
 6. If a family member took his wife or any other members of the consumer unit along with him on a business trip, the expenses for such additional family members were recorded as family expenses.
 7. Column (d), Net expense of family in schedule year: this column represented the sum of each type of expenditure recorded in column (b) which was not classified as an occupational expense, less reimbursements. (For occupational expenses, if reimbursements were less than expenses, the difference was added to other occupational expenses (Section U). If reimbursements were greater than occupational expenses, the difference was added to the wages of the family member involved (Section S, item 6)).

Other Family Expenses
Schedule B, Section R

- I. This section covered miscellaneous family expenditures for current consumption not reported in other sections of the schedule.

II. Item definitions

- A. Item 1, Interest: recorded here was all interest not reported elsewhere in the schedule.
- B. Item 4, Loss: covered monetary losses, and deposits or payments made and forfeited or not returned. Gambling losses were reported in Section O, item 28.
- C. Item 6, Funerals, etc.: funeral expenses included burial and undertaker's charges, flowers, auto rental, transportation, fees to clergymen, organists, etc. (These expenses applied to family members only--not to persons outside the family.)
- D. Item 7, Legal expenses: covered legal fees not recorded elsewhere. Included fees for the preparation of contracts, deeds and wills, breaking of leases, damage suits, personal income tax advice, notary fees, etc.
- E. Item 8, Other expenses: this was a catch-all item for all expenses which could not be entered in other places in the schedule. For example: fines and court judgments, marriage license fees, personal counseling fees, stipends to clergymen officiating at baptisms and weddings, organist's fees at weddings, etc. (All-expense tours reported in Section Q (out of home city expenditures) were also included in this "other expenses" classification.)

Money Income

Schedule B, Sections S and T

- I. While certain types of income (net rents, profits from stocks and bonds, etc.) were reported in other sections of the schedule, Sections S and T covered the principal sources of money income, reported separately for each family member.
 - A. Section S, Family Earnings was set up in two parts:
 - 1. S-I: Wage and salary earnings in the survey year.
 - 2. S-II: income from a profession or unincorporated business in the survey year.
 - B. Section T reported money income from sources other than earnings.
- II. Section S-I, Wage and salary earnings: included the earnings of armed forces personnel living at home; of family members who received wages for part-time or vacation jobs, baby sitting, newspaper routes, and other odd jobs; and of family members who worked for wages in an unincorporated business operated by another family member (who was the proprietor or a partner in the business).

- A. Item 4, Number of weeks worked: included paid vacation and paid sick leave.
- B. Item 6, Total wages and salaries before deductions: this item included tips, bonuses and advances, and any excess of reimbursements for occupational expenses over the actual expenses.
1. The value of rent and/or food received as pay was classified as a part of total wage and salary earnings (as well as being classified as an expenditure), while all other goods or services received as pay or without cost were tabulated as an independent group separate from both income and expenditure data.
 2. Nonreimbursed occupational expenses were not classified as expenditure items by BLS; instead, they were deducted from wage and salary income, in calculating net earnings.
- C. Item 7, Deductions from wages and salaries
1. Item 7(c), (d), and (e), Retirement deductions: these items were classified as a part of expenditures for personal insurance. (Here, as in all other deduction items, employers' contributions were not included.)
 2. Item 7(f), Union dues and assessments: these occupational expenses (see Section U) were limited to dues and assessments wherever possible. Pension, insurance or medical deductions which may have been collected for a union were entered in the appropriate items if they could be separated.
 3. Item 7(j), U. S. Savings Bonds: these deductions were also recorded in Section V (Changes in assets and liabilities), item 7, if held at the end of the survey year, or in V-16, if sold in the survey year. (They appear here only as an aid, if needed, in determining total wages and salaries.)
 4. Items 7(h) and 7(k), Group life insurance and medical insurance:

With one exception, if a combined deduction was reported for these items, it was entered in S-I, 7(k). (This information was also reported in Section M-I, (Health insurance) item 7(b).) The exception was that if the combined deduction for S-I 7(h) and (k) involved two separate policies, and the corresponding policy reported in Section M-I did not include life insurance, the figures in Section S were adjusted by allocating 40 percent to item 7(h) and 60 percent to item 7(k). (Item 7(h) was classified as a part of personal insurance.)

5. Item 7(1), Other deductions: included deductions for meals, uniforms, credit union loans and/or shares, stock purchase plans, salary savings plans, rent, armed forces dependency allotments, etc. These items were also recorded as expenditures or changes in savings and debt in their appropriate sections.

III. Section S-II, Income from profession or unincorporated business

- A. Reported here were income data for a family member(s) who participated as the owner (sole proprietor or partner) of an unincorporated business from which he received income or on which he reported losses. This included any family member(s) who practiced a profession on an unincorporated basis, and other persons who were self-employed.
1. All businesses (whether the family member was active, inactive or silent) were reported if income was received (or loss reported) in the survey year.
 2. Income data for other family members who in the survey year worked as employees (not partners) of a family business were reported in S-I, not in S-II.
- B. Item 4, Net income before personal income taxes: referred only to a family member's share of such income. Income of a partner(s) outside the reporting family was not recorded.
1. Net income was the amount remaining after costs and expenses of doing business had been deducted from total money receipts or gross income. Those costs and expenses which could be deducted were (1) material, merchandise and supplies; (2) salaries paid to help; (3) depreciation, interest, rent, utilities, repairs, taxes, and other business expenses. These expenses did not include salary or money withdrawn from the business by the owner.
 - a. Since this was a study of family living expenses, and business operation costs were not part of such living expenses, they were not itemized in the schedule.
 2. Items 5 and 6, Income taxes: reported were Federal, state and local income taxes paid in the survey year on the family member's income from the business.
 3. Item 8, Value of goods and services withdrawn: the retail value of such goods and services was also reported as expenditures in the appropriate sections.
 4. Item 11: included the transfer of family cash to the business account, and the purchase of business equipment and supplies with family funds.

5. Items 8 through 11 represented data obtained in order to check items 4 and 12, where: $\text{Item 4} = \text{item 8} + \text{item 9} + \text{item 10} + (\text{item 12} - \text{item 11})$.

If this formula was more than 10 percent out of balance, the section was reviewed in the field, and an effort made to obtain more precise information.

As noted on the schedule, item 12 (net change in investment in business) was transferred to Section V, item 5.

6. The supplemental worksheet for Section S-II, item 12 was used only when the respondent was unable to report the net change in investment in business.

IV. Section T, Money income from other sources: this section recorded all money income not listed elsewhere in the schedule.

- A. Item 1, Interest: received by or credited to family members from bonds, savings accounts, loans, etc. So-called "dividends" paid by credit unions, savings and loan associations and similar groups were classified as interest and reported here. Interest accrued but not paid in the schedule year, such as on U.S. Series E Savings Bonds which have not been cashed, was excluded. However, for Series E Bonds cashed during the schedule year, the amount received over and above the original cost was entered here. Excluded also was interest from mortgages on property sold in the schedule year (which appears in Section D-II, item 25, and which BLS classified as a separate type of interest income).
- B. Item 2, Dividends: received by or credited to family members. Included patronage refunds from cooperatives and dividends from insurance policies (except veterans' insurance) whether paid to the family member, left on deposit, or applied to future premiums. (Dividends from stocks and mutual funds might also be applied toward the purchase of additional stock.)
- C. Items 3 through 6, Receipts based on military service: these items covered all receipts of this nature for present or past military service, except military pay received for active service by service personnel living at home (recorded in Section S-I).
1. Item 3: included re-enlistment bonuses, state bonuses, and dividends on National Service Life Insurance or other veterans' insurance, whether paid to the family member, left on deposit, or applied to future premiums.
2. Item 4, Pensions and compensations: allowances to veterans based on military service. Included allowances under the "G.I. Bill" for education and for on-the-job training, pensions, service and nonservice connected disability pay, etc.

3. Item 5, Dependency allotments: if a serviceman was not a member of the consumer unit in the survey year, the total amount of the allotment (government contribution plus serviceman's pay deduction) was reported. If a serviceman was a family member, only the government contribution was recorded here, with the pay deduction and any voluntary allotments which were deducted, recorded in Section S-I.
4. Item 9, Unemployment benefits: may have been from Federal, state, or local sources. Included income from supplemental unemployment benefits paid by employers, labor unions, or fraternal organizations.
5. Item 12, Annuities and trust funds: reported here were regular periodic payments (not lump-sum insurance settlements). Included were payments or withdrawals of interest and/or principal from trust funds, and from annuity or insurance proceeds on deposit with trust companies and insurance companies.
6. Item 13, Public social assistance or private relief: cash payments from public or private sources, such as Federal Old Age Assistance, Aid to Dependent Children and other "Aid to" programs. Social security insurance payments were not reported here, nor was noncash assistance. The value of food in-kind receipts were reported in Section J, item 28 and other in-kind relief grants were entered in the applicable Standard Questions.
7. Item 14, Gifts of cash from other persons not in the family: this item included small voluntary cash gifts (except regular contributions for support). Receipts with a legal basis were included in item 15.
8. Item 15, Regular contributions for support: from persons outside the consumer unit. Included alimony, child support, etc., but was not limited to legal support agreements.
9. Item 17, All other income: this was a catch-all category. It included reimbursements from car pools or the sharing of a car; receipts from royalties; gambling receipts over and above expenses and losses; proceeds from the sale of items not covered in the Standard Questions, money awarded as a contest prize, in a drawing, or in a mass participation event; etc.
10. Item 19, Other money received:
 - a. Inheritances and occasional large gifts of money, less taxes, legal fees, and other expenses required to obtain such receipts. Also, lump-sum insurance settlements from insurers, including property, casualty, and disability payments covering damage or injury to (or destruction or loss of) person,

property or facilities; and lump-sum payments from individuals or business firms as the result of a judgment or a settlement agreement.

(1) In the case of property insurance, the amount reported in Item 19 was the excess of insurance payments over expenses for repairs and replacements. (If such expenses were higher than the insurance payments, the excess of expenses was reported in the appropriate expenditure items.)

(2) Not reported in item 19 were: a) health insurance payments recorded in M-I, item 10; or b) lump-sum payments on the surrender of life insurance or annuity policies, and payments of life insurance upon the death of the insured, which were entered in Section V.

b. Other income reported in item 19 included cash scholarships, and excess of reimbursements over expenses for in-home-city expenses other than for owned automobiles. (See Section P-I, page 31. for handling of reimbursements.)

**Personal Taxes, Personal Insurance, Occupational Expenses,
Gifts, and Contributions not Deducted from Wages and Salaries**
Schedule B, Section U

I. Included in this section were items of expense which were not classified by BLS as expenditures for current consumption, and a report on income tax and other refunds received in the survey year.

A. Personal taxes due in the survey year, personal insurance, and gifts and contributions were not considered by BLS as expenditures for current consumption, and each was classified as an independent type of expense. (See Section V, I C for a discussion of alternative classifications of personal insurance.) Section U covered only outlays not reported elsewhere in the schedule; therefore, data on taxes, insurance, and gifts and contributions from Section U were classified with similar expenditures reported in other sections.

B. Occupational expense: the expenses reported here related to earnings from wages and salaries. These costs were not classified as expenditure items by BLS; in the BLS tabulations they were deducted from gross wages or salaries, in calculating net earnings.

II. Item definitions

A. Items 1 through 6, Personal taxes due in the survey year: reported here were all such taxes due and billed in the survey year, whether or not they were actually paid in that year. (Amounts unpaid at the end of the year were entered in Section V, (Changes on assets and liabilities), item 27(c).

1. Item 1, the Federal income tax reported in Section U included: (a) the Federal income tax reported on the return; (b) the lump-sum payment due between January 1 and April 15 on the previous year's income.

(b) The estimated tax for the survey year which would not be withheld, and which could be paid either in a lump sum or in quarterly payments.

2. Item 2: similar payments might also have been made for state and local income taxes.

B. Item 9(a) and (b), Insurance refunds: generally made on unexpired portions of the policy when insurance is cancelled due to the sale of the item or property insured.

C. Items 10 through 15, Personal insurance: reported here were all premiums due and billed in the survey year, whether paid or not. Amounts unpaid at the end of the survey year were entered in Section V, item 24(c).

1. Item 11, Combined insurance: a frequent combination is life and casualty (disability, property, health).

2. Item 12, Mutual aid insurance: issued by mutual aid societies, unions or fraternal organizations, apart from dues, membership fees and assessments. Frequently covers burial expenses.

3. Item 13, Personal liability insurance: protection from suits arising from injuries received in the respondent's home, on his property, etc. The "comprehensive" excluded from this item refers to a comprehensive home owner's policy.

D. Items 17 through 23, Gifts and contributions: reported here were gifts of cash to persons outside the family, and to all types of organizations. Nonmoney gifts (food, clothing, etc.), to persons or organizations outside the family were reported in the various Standard Question Sections.

1. Item 17, Contributions for support: included money paid for child support, as well as alimony. Also included military allotments deducted from a family member's pay and given to a nonfamily member.

2. Items 19 through 23: if an amount was pledged, only that portion actually paid in the survey year was reported.
 3. Item 20, Church and other religious organizations: included gifts to building campaigns and other special drives, as well as Sunday collections, regular offerings, and tithes.
 4. Item 21, Educational and medical organizations: included gifts to scholarships, alumni building funds, and contributions to foundations (and their fund-raising agencies) for medical treatment and research (cancer, heart, tuberculosis, etc.).
 5. Item 22, Political and cooperative groups: included campaign and party drive contributions.
- E. Items 25 through 28, Occupational expenses
1. Item 25, Union dues and assessments: entered here were dues, initiation fees, and regular assessments (over and above dues) levied by the union and paid directly to the union or its agent by a family member. Not included were union insurance (S-I if deducted from pay, or U, 10-15), special assessments (see below in U 28), or dues reported in S-I. If union dues were combined with a general health insurance policy, 50% of the combined figure was allotted to dues, and 50% to health insurance.
 2. Item 26, Business and professional association dues: limited to dues of this type paid by wage and salary workers. Dues paid by self-employed or professional people were deducted as business expenses in Section S-II.
 3. Item 27, Tools, supplies and equipment: reported here were expenditures for items other than clothing which were used principally in connection with work or a vocation. It included such items as carpenter's saws, slide rules, musicians' instruments, electricians' kits, etc.
 4. Item 28, Other occupational expenses: included here were special assessments by unions (irregular levies for temporary or emergency situations such as strikes or relief funds), entertainment, automobile, and travel expenses which were not reimbursed, license fees paid by salaried workers (beauty operators, cab drivers, doctors, notary publics, etc.), expenses to obtain a job (employment service fees, advertising costs, etc.) and other such items.

Changes in Family Assets and Liabilities
Schedule B, Section V (and other Sections)

I. In order to round out the family account, the expenditure and income data were supplemented by a record of the net change in family assets and liabilities during the survey year. Sections D and E of the schedule reported on savings and debts resulting from the ownership of real property. The four Standard Questions pages contained, for most goods and services, information on items sold during the year, and amounts owed by the family at the beginning and end of the year. Section V included changes in family assets and liabilities not reported elsewhere.

A. Changes in assets and liabilities were defined as follows:

1. Increases in assets: increases in cash holdings, business investments, and money owed to the family; purchase or improvement of dwellings and other real property; purchase of stocks and bonds; and increase in other assets.
2. Decreases in assets: decreases in cash holdings, business investments, and money owed to the family; sale of dwellings, other real property and personal property; stocks and bonds sold, called or retired; settlement or surrender of personal insurance policies; and decreases in other assets.
3. Decreases and increases in liabilities: changes in: the mortgage debt on dwellings and other real property; money owed to banks, insurance companies, etc.; money owed for rent, taxes, automobiles, house furnishings and equipment, other goods and services; and changes in other liabilities.

B. The algebraic sum of the increases and decreases in assets and liabilities equalled the net change in all assets and liabilities during the survey year. Net increases in assets or decreases in liabilities represented a net saving, while net decreases in assets or increases in liabilities represented a deficit (-), or net dissaving. (For savings and dissavings in the total family account of receipts and disbursements, see main handbook text, page 15. Also see the BLS summarization of all savings increases and decreases from Schedule B, as given on page 2 of Schedule D, Attachment 7.)

C. In this study personal insurance (life, endowment, annuity, etc.; fraternal, union, and other mutual aid insurance; and Social Security and other government and nongovernmental retirement) was not considered by BLS as a saving item. Premiums paid on personal insurance were handled as a separate (noncurrent consumption) expenditure item. Thus, other users of the data can treat these insurance payments either as savings or expenditures, as they see fit.

II. Section V, Changes in Family Assets and Liabilities not Reported Elsewhere

A. 1. The amount recorded in each item in Section V represented the total for all members of the family combined. Entries for part-year members corresponded to the beginning and/or ending dates of their family membership; rather than January 1 and December 31 of the survey year.

2. Columns (b) and (c)

a. For items 1 through 3, 6, and 21 through 27; the amounts were recorded for both the first and last day of the survey year, in order to determine whether the change represented an increase or a decrease in family worth.

b. For items 4, and 7 through 14, the amount was recorded in either column (b) or (c), since each of these items represented only an increase or a decrease in assets.

c. Items 17 through 19, Stocks and bonds both purchased and sold during the survey year. These transactions were considered income items, and the profits or losses involved were tabulated as positive or negative income.

3. Columns (d) and (e): for asset and liability items, column (d) reported decreases, and (e) increases. For items 17, 18, and 19, column (d) represented income losses, and (e) profits.

B. Item definitions

1. Item 1, Cash in savings accounts: included interest received in the survey year and left on deposit, which was also reported in Section T, item 1.

2. Item 3, Money owed to family members by individuals: this was not limited to money owed by individuals. With one exception, it covered money owed to the family by all sources outside the consumer unit. The exception was a mortgage held by the family from the sale of real estate in the survey year, which was reported in Section D-II, items 23-25. (Money owed the family on a mortgage from the sale of real estate before the survey year was included in Section V.)

a. Included in item 3, column (b), was any money owed the family for deposits made on goods not delivered by January 1 of the survey year; or in column (c) if not

delivered by December 31 of that year. (If the deposit was made before the survey year, and the goods were still not delivered by December 31, the deposit was entered in both columns (b) and (c).

b. Delayed reimbursements: when reimbursements were received in the survey year for expenses incurred before that year, the amount due but not paid on January 1 was entered in Item 3, column (b). When reimbursements were to be received after the survey year, the amount of the reimbursement due but not paid on December 31 was entered in column (c).

3. Item 4, Settlement or surrender of insurance policies: applied only to the proceeds of policies owned by family members. (Money received from policies of nonfamily members was reported in T-19.) Only lump-sum payments on life or annuity insurance were reported (not periodic payments or partial withdrawals, recorded in T-12; or money received from loans against insurance, reported in V-24; or lump-sum payments from insurance other than life or annuity, which were entered in T-19).

4. Items 7 through 19, Stocks and bonds: included in the reports of sales were stocks and bonds which were called by the company or retired in the survey year.

5. Items 7 and 8, U.S. Savings Bonds: referred to Series E and F bonds only. Both purchases and sales were reported at purchase price; interest was entered in Section T, item 1.

6. Items 9 and 10, Other bonds: corporate, municipal, state, foreign, and U.S. bonds except Series E and F.

7. Items 11 and 12, Mutual fund shares: included investment trust shares. Item 11 included the value of shares purchased by reinvestment of earnings in the survey year. (Such earnings were also entered as income in Section T, item 2.)

8. If a respondent received a gift of securities in the survey year and sold them during that year, there was an entry in column (b) for the appropriate item listed as "held at beginning of SY and sold during SY."

9. Items 21 through 27: only principal owed was reported here; interest and fees paid in the survey year were recorded in Section R. (Other family expenses).

10. Item 24, Money owed insurance companies: included loans against cash value of life insurance, and amount owed for premiums due but not paid.

11. Item 25, Money owed stock brokers: included amounts owed for stock purchased on margin. (In recording the purchase of stock bought on margin in the assets section, the total purchase price plus the broker's fee was entered.)
12. Item 26, Money owed individuals: this item was not limited entirely to money owed to individuals: included here were advance reimbursements: if an advance was received before the survey year for expenses incurred in the survey year, the amount of the advance was reported in item 26, column (b).

If an advance was received in the survey year for expenses to be incurred after that year, the amount of the advance was entered in item 26, column (c).

13. Item 27, Other liabilities: any liabilities not recorded anywhere else in the schedule, including:
 - a. Balances on revolving charge accounts and installment debts which applied to several sections of the schedule.
 - b. Debts for the purchase of food and other items reported in Section J.
 - c. Personal taxes due and billed in the survey year, but not paid by the end of that year were reported in column (c). (Not reported here were taxes paid in the survey year for prior years, which were entered in Section U, item 7; or changes in liabilities for real estate taxes in the survey year, which were entered in Section D-I, items 4 and 5.)

Combined Expenditures

Schedule B, Section X

When combined expenditures were reported for current consumption items, and they involved more than one major expenditure category (e.g., cleaning supplies, code 3261, and food, code 3110), or more than one subcategory, (such as ground rent, code 3225 and water, code 3253 - see Attachment 8, "Coding System," for further explanation of the section codes), the amount spent for each category was estimated by the professional review staff. The estimates involved determining the relative importance of known expenditures of the same types as those in the combined group, and using the resulting ratios to break down the combined figures. (For most cities the 1960 Detroit data were used to compute the ratios.)

Certain of the separated expenses were transferred to the specific items involved; the rest were treated in the tabulations as unallocated expenses within the appropriate major expenditure categories. Those expenditures transferred to specific items were:

<u>Item</u>	<u>Section Code</u>
Food as pay	3128
Rent as pay	3218
Expenses on owned real estate:	
Interest	3221, 3231
Taxes	3222, 3232
Insurance	3223
Repairs	3224, 3234
Other owner costs	3225
Hosiery, infants	3355
Footwear, infants	3356
Dental care	3523
Eye care	3524
Drugs and medicine	3525
Practitioners	3526
Pet food	3715 (J-13: 3261)

Survey of Consumer Expenditures, 1960-61

CLASSIFICATION CODES--Definitions and Identification

Notes: Except as indicated, the same codes apply to the data from all places surveyed for 1959 through 1963. Asterisk (*) indicates that code was preprinted on schedule. Underlined CC No. (e.g. 3) indicates that coding was done during machine tabulation; all other codes were entered on schedule during editing.

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained. (Unless otherwise noted, all references are to section and item numbers in BLS Schedule 2648-B)
1.	<u>Sex*</u>		For <u>head</u> and each FM, from Sec. A, item 4. Family classified by sex of head, col. (b).
	Male	1	
	Female	2	
2.	<u>Race*</u> (Also see CC-42: Race and Tenure)		For <u>head</u> and each FM, from Sec. A, item 18. Family classified by race of head, col. (b).
	White	1	
	Negro	2	
	Other	3	
3.	<u>Education</u>		Number of grades completed in schools which advance person to elementary or high school diploma or to college, university, or professional school degree.
			For <u>head</u> and each FM, from Sec. A, item 7. Family classified by education of head, col. (b).
			For condensed codes use only first digit, combining 8 years or less 9-12, 13-16.
			(Note: in BLS General Purpose Tabulations, persons whose education was not reported were included in the class "8 years or less").
	Less than 8 years	11	
	8 years	12	
	9 through 11 years	23	
	12 years (high school graduate)	24	
	13 through 15 years	35	
	16 years (college graduate)	36	
	More than 16 years (postgraduate)	47	
	Not reported	18

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained.
4.	<u>Number of persons in family</u>		Family classification.
a.	Average number of persons (the number of full-year equivalent persons)		Total number of weeks of all persons in family, from Sec. A, item 8, divided by 52, and rounded to 1-decimal. (See CC-7, below). <u>Count</u> of persons
b.	Number of persons under 18	0-9	under 18 years (except married)
c.	Number of persons 65 years and over	0-9	and of persons 65 years and over, from Sec. A, items 5 and 6. Code 7-9 or more persons.
5.	<u>Relationship to head of family*</u>		In a husband-wife situation, the head is always the husband. In other situations, the head is the person so recognized by others in the family. For head and each FM, from Sec. A, item 2.
	Head	0	
	Spouse	1	
	Never married child	2	
	Other child	3	
	Grandchild	4	
	In-law	5	
	Brother or sister	6	
	Mother or father	7	
	Otherwise related	8	
	Unrelated	9	
6.	<u>Marital status*</u>		For head and each FM, marital status at end of SY, from Sec. A, item 5.
	Married	1	
	Never married	2	
	Divorced	3	
	Separated	4	
	Widowed	5	
	Deceased during SY	6	
	Not reported	7

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained.
7.	<u>Family size</u>		Family classification. Obtained by converting "Average number of persons in family" (CC-4a) to a 2-digit code. For condensed codes, use only first digit, i.e., combine 1.1 to 2.9 and 6.0 and over.
	1.0 person or less	11	
	1.1 to 1.9 persons	22	
	2.0 to 2.9 "	23	
	3.0 to 3.9 "	34	
	4.0 to 4.9 "	45	
	5.0 to 5.9 "	56	
	6.0 to 6.9 "	67	
	7.0 to 7.9 "	68	
	8.0 persons and over	69	
8.	<u>Age</u>		For each FM, age on SY birthday, from Sec. A, item 5. For condensed codes for classification of family by age of head, use only first digit, i.e., combine all classes under 25 years.
	Under 2 years	71	
	2 through 5 years	72	
	6 " 11 years	73	
	12 " 15 years	74	
	16 " 17 years	75	
	18 " 24 years	76	
	25 " 34 years	77	
	35 " 44 years	78	
	45 " 54 years	79	
	55 " 64 years	80	
	65 " 74 years	81	
	75 years and older	82	
	Not reported	83	
9.	<u>Family type</u>		Family classification. Full-year members were in family 52 weeks in SY; if less than 52, considered part-year. From Sec. A, item 8.
	a. <u>Part-year members</u>		
	Full-year members only	1	
	Full-year and part-year members	2	
	Part-year members only	3	
	b. <u>Relationship of FM's</u>		Relationship to head. "Own" children are sons and daughter, including stepchildren and adopted children of head. Entries in Sec. A, item 2 (see CC-5 to be combined as follows:

Consumer Unit must have 1.0 Persons to get into BLS TABS or cite BLS TAPES

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained.
-----------	----------------	------	--

	Single consuer	1	Code 0 only
	Husband and wife only	2	Code 0 and 1 only
	Husband and wife, own children, no other persons in family	3	Code 0, 1, 2 and/or 3 only
	Husband and wife, own children, other relatives	4	Codes 0, 1, 2 and/or 3, plus any codes 4 through 8
	One parent (head), own children, no other persons in family	5	Codes 0, 2 and/or 3, only
	One parent (head), own children, and other relatives	6	Codes 0, 2 and/or 3, plus any codes 4 through 8
	Husband and wife, no own children, other relatives	7	Codes 0, 1, plus any codes 4 through 8
	Husband and wife, no own children, others not related	8	Codes 0, 1 and 9 only
	All other	9	

c. Age of children of head

For FM's coded 2 or 3 in Sec. A,
item 2, take age from item 5.

No children of any age	0	No entries of 2 or 3
Oldest child under 6 years	1	
Oldest child 6 through 11, youngest under 6 years	2	
All children 6 through 11	3	
All children 12 through 17	4	
Oldest child 12 through 17, youngest under 6	5	
Oldest child 12 through 17, youngest 6 through 11	6	
Oldest child 18 and over, youngest under 6	7	
Oldest child 18 and over, youngest 6 through 17	8	
All children 18 and over	9	

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained.
--------	----------------	------	---

d.	Relationship and children's age (Family type, as published by BLS)		Condensation and combination of 9(b) and 9(c).
	Husband and wife only	1	
	Husband and wife, own children, oldest under 6	2	Codes 2, 3, and 4 are limited to husband and wife and their own children, with no other persons in the family.
	Husband and wife, own children, oldest 6-17	3	
	Husband and wife, own children, oldest 18 and over	4	
	All other husband and wife families	5	
	One parent, own children only	6	Code 6 is limited to parent and own children with no other persons in the family.
	All other families and ^{ALL} singles _{consumers}	7	

10. Subfamilies

The primary family consists of the head and other members of the consumer unit other than married couples or a parent with single children. These married couples (with or without children) and/or one parent with one or more single children constitute subfamilies. (A common example of a subfamily is a young married couple sharing the home of the husband's or wife's parents.)

a. Primary and subfamily number

For each FM, code on basis of relationship shown in Sec. A, items 2 and 3.

Primary family member	1
Member of first subfamily	2
Member of second subfamily	3
Member of third subfamily	4
Etc.	5-9

b. Number of subfamilies

Family classification. Code will be determined from codes in CC-10a.

No subfamily	0
One subfamily	1
Two subfamilies	2
Etc.	3-5

Code 1 (primary family only)
Maximum code of 2 for subfamily
Maximum code of 3 for subfamily
Maximum code of 4, etc.

NOT ON
CES G.P. TAPE

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained.
	c. Subfamily composition		For each FM covered by definition of a subfamily above, code subfamily composition on basis of relationship to head, relationship to other members, and age of children. From Sec. A, items 2, 3, and 5.
	Member of primary family	1	All FM's coded 1 in CC-10(a) above.
	Husband-wife subfamily-parents of head or wife	2	
	All other husband-wife subfamilies	3	
	Parent-child subfamily-all children under 18 years	4	
	Parent-child subfamily-children 18 and over and under 18	5	
	Parent-child subfamily-all children 18 or over	6	
11.	<u>Number of earners</u>		Family classification. Count as earner each FM with entries in Sec. S-I, S-II and Sec. A, item 16 (helping in family business). Count each FM only once, regardless of the number of jobs held in SY. If "No" box in S-II, item 2, is checked, do not count FM as earner.
	a. <u>Total number of earners</u>		
	No FM employed	0	
	One FM employed	1	
	Two FM's employed	2	
	Three FM's employed	3	
	Four, etc.	4-9	
	b. <u>Number of full-time earners</u>		Count as full-time earner each FM with 48 weeks or more at 35 hours or more per week in S-I, items 4 and 5, and FM's with 48 weeks or more in S-II-3. Include FM's employed in industries where customary full-time employment is less than 48 wks. or 35 hours per week (e.g., school systems, airlines).
	No full-time earners	0	
	One full-time earner	1	
	Two full-time earners	2	
	Three full-time earners	3	
	Four, etc.	4-9	

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained.
--------	----------------	------	---

12. Earners composition

- Head only employed 0
- Head and wife only employed 1
- Head and only FM's 18 and over employed, not wife 2
- Head and only FM's under 18 employed, not wife 3
- Head and any FM's of other age combinations employed, not wife 4
- Head and any other earner combination, including wife 5
- Head not employed; no other FM employed 6
- Head not employed; wife only employed 7
- Head not employed; any FM of any age employed, except wife 8
- Head not employed; any other earner combination including wife 9

Family classification. For all FM's with entries in S-I, S-II, and Sec. A, item 16 (helping in family business), refer to Sec. A, items 2 and 5, to identify their relation to head and age. There is no limit on hours or weeks employed. If "No" box in S-II item 2, is checked, do not count FM as earner.

13. Occupation

For each job held by FM, code occupation in Sec. S-I, item 1 or S-II, item 1, using 1960 Census of Population, Alphabetical Index of Occupations and Industries to determine code.

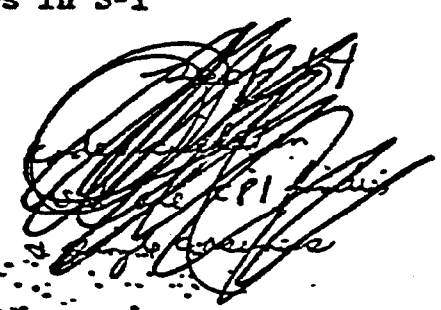

a. Working for pay

(1) Salaried and wage earners

- Professional and technical 210
- Managers and officials 220
- Except farm 221
- Farm 222
- Clerical and sales 230
- Clerical 231

- Laborers (except farm) 253
- Farm laborers 254

Summary occupations published by BLS
Entries in S-I

OCCUPATION OF CV
HEAD ON G.P. TAPE

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained...
-----------	----------------	------	--

13. a. (1) Salaried and wage earners (continued)

Members of armed forces	260-7
Enlisted personnel	(261)
Commissioned officers	262
Occupation not reported	299-6

(2) Self-employed

Professional and technical	110
Proprietors	120
Except farm	121
Farm	122
Occupation not reported	199

Entries in S-II

(3) Major occupation

Same
as
above

For each FM, also code occupational status as follows:
If more than one job was coded for FM in Sec. S-I and/or S-II, determine code for the job held longest number of weeks in SY from S-I, item 4, and S-II, item 3. If two or more jobs were worked equal number of weeks, use occupation with highest earnings.

(4) Retirement status

If FM reporting earnings in Sec. S-I and/or S-II also had (a) retirement income in Sec. T, items 4, 11, 7 and/or 8. (with no indication that retirement income was received through survivor's benefits); or (b) income from other sources in Sec. T and retirement is noted in Sec. A, item 17, code as follows:

Earnings greater than
retirement income

Same
as
above

(1) If earnings in Sec. S-I and S-II are greater than income in Sec. T, item 18, use same occupational codes as above.

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained.
-----------	----------------	------	--

13a. Occupation (cont.)

*Summary occupation
(cont'd.)*

Earnings less than
retirement income

3-- (2) If earnings in Sec. S-I
and S-II are less than income
in Sec. T, item 18, code as
retired partially by substituting 3 for first digit of
above occupational codes.

b. Not working for pay
Retired completely

300 - 8 If FM reported no earnings
in S-I or S-II and received
income from retirement as
defined above, code as retired
completely.

Not working, but not retired

000 - 9 No entries in Sec. S and no
evidence of retirement in
Sec. A or T.

Helping in family business,
without pay

130 ← *Grouped with self-employed*
Entry in A-16

14. Industry and class of work

FOR HEAD ONLY
ON ~~GP~~ TAPE

For each job held by FM, code industry in Sec. S-I, item 2, and S-II, item 1, using 1960 Census of Population Alphabetical Index of Occupations and Industries, to determine code. If "government" is entered in S-I, item 3, use section of index for appropriate level; i.e., U.S., State, Municipal, etc.

If more than one job was coded for FM in Sec. S-I and/or S-II, use industry code to correspond with "Major occupation" (See CC-13(a), (3) above).

a. Industry

- Industry not reported
- Agriculture, forestry and fisheries
- Mining
- Construction
- Manufacturing
- Transportation, communication and other public utilities
- Trade (wholesale and retail)
- Finance, insurance, and real estate
- Services (business, personal, recreation, and professional)
- Public administration

- 0 Includes FM's retired completely and others not working
- 1
- 2
- 3
- 4
- 5
- 6
- 7
- 8
- 9

b. Class of work

For each FM. For FM's in S-I, use codes entered in item 3. For all businesses in S-II, use code 1.

- Class of work not reported
- Private
- Government

- 0 Includes FM's retired completely and others not working
- 1
- 2

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained.
15.	<u>Family income.</u>		Family classification. Code used for net money income of family: (1) before payment of personal taxes and (2) after payment of personal taxes.
	<u>a. Before taxes</u>		
	Negative income	01	
	0 - \$1,000	02	Money income includes wages and
	\$1,000 - 1,499	11	salaries (less occupational
	1,500 - 1,999	12	expenses plus value of food
	2,000 - 2,499	21	and housing received as pay),
	2,500 - 2,999	22	income from unincorporated
	3,000 - 3,999	30	business or profession, net
	4,000 - 4,999	40	receipts from rented properties
	5,000 - 5,999	50	and roomers and boarders,
	6,000 - 6,999	61	interest and dividends, receipts
	7,000 - 7,499	62	based on military service,
	7,500 - 7,999	71	unemployment insurance, social
	8,000 - 8,999	72	security benefits, other pen-
	9,000 - 9,999	73	sions and retirement benefits,
	10,000 - 12,499	81	cash received as public or
	12,500 - 14,999	82	private relief, periodic pay-
	15,000 - 19,999	91	ments from private insurance
	20,000 - 24,999	92	annuities and trust funds,
	25,000 and over	93	profits and losses from sale
			of stocks and bonds bought in
			SY, contributions from persons
			not in family, and such items
			as alimony, prizes, and gambling
			gains.
			Includes all income entries
			on schedule (i.e., items with
			section code in 1200 series).
			Inheritances and occasional
			large gifts of money and net
			receipts from settlement of
			fire and accident policies are
			defined as "other money
			receipts" and are not included
			with money income for family
			classification purposes.
			For condensed income codes
			use only first digit, combining
			like digits.
	<u>b. After taxes</u>		Same as 15(a) after deduction
			of personal taxes.

INCOME OF CU

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained.
16.	<u>Individual income (before taxes and occupational expenses)</u>		For each FM, total of income (items with section code in 1200 series) reported by FM number. Includes wages and salaries (plus value of food and housing received as pay), income from unincorporated business or profession, and any other income listed in CC-15 reported by FM. For con- densed codes, use only first digit, combining like digits.
	No income	01	
	Negative income	11	
	Under \$100	12	
	\$100 - \$499	13	
	500 - 999	14	
	1,000 - 1,499	21	
	1,500 - 1,999	22	
	2,000 - 2,499	31	
	2,500 - 2,999	32	
	3,000 - 3,999	40	
	4,000 - 4,999	50	
	5,000 - 5,999	60	
	6,000 - 6,999	71	
	7,000 - 7,499	72	
	7,500 - 7,999	81	
	8,000 - 8,999	82	
	9,000 - 9,999	83	
	10,000 and over	90	

17. Income change (long-term information)

Family classification.

- a. Between SY and SY minus 1*
 b. Between SY minus 1 and SY minus 2*
 c. Between SY and SY plus 1*

From Sec. W. item 1(a).
 From Sec. W. item 2(a).
 From Sec. W. item 3(a).

- Much higher (more than 25%) 1
 Somewhat higher (5 to 25%) 2
 About the same 3
 Somewhat lower (5 to 25%) 4
 Much lower (more than 25%) 5
 Don't know 6
 Not applicable 7
 Not reported 0

All codes for this in Anchorage (city code "01") are "0".
 Question NOT asked.

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained.
18.	<u>Reason for change in income</u>		Family classification. Code reason for change for all 3 periods of income comparison, in Sec. W, items 1(b), 2(b), 3(b).
	Don't know; no answer; not applicable	0	
	Change (increase or decrease) in:		
	Pay-scale or self-employment earnings of head	1	
	Hours or weeks worked by head	2	<i>Reason for change in period (Between SY minus 1 + SY minus always code "0" in Anchor (city code "01"). Question asked.</i>
	Number of "supplementary" or "extra" jobs held by head	3	
	Number of other FM's employed	4	
	Amount of earnings of other FM's	5	
	Receipts from pensions, retire- ment, public or private assistance, etc.	6	
	Amount of gifts, winnings, etc.	7	
	Receipts from dividends, interest, rents and other investment income	8	
	Other reasons or combination of reasons	9	
19.	<u>Income-savings ratio</u>		Family classification. Ratio of net savings or dissavings to family income after taxes. Net savings or dissavings is algebraic sum of increase in assets (items coded 2110), decrease in assets (2120), decrease in liabilities (2110 and increase in liabilities (2220).
	Net savings of 10 percent or more	1.	Covers changes in debts to stores, banks, individuals, etc.; changes in savings accounts, stocks, etc.; pay- ments of principal on owned real estate.
	Net savings of 1 to 9.9 percent	2	
	No savings (net savings or dissavings ratio of less than 1 percent)	3	
	Net dissavings of 1 to 9.9 percent	4	
	Net dissavings of 10 percent or more	5	
	All other	6 a/	a/ Negative or zero income, and therefore, no ratio possible.

CC No.	Characteristic	Code	Definition of characteristic and section and item number of schedule entry from which obtained.
-----------	----------------	------	---

20. Consumer Price Index (CPI) families

Family classification. To meet the definition of an Index Family, a single consumer or a family of two or more persons must have:

(1) At least one FM earning wages and salaries from one of the following occupations, coded in Sec. S-I, item 3:

- 230, 231, or 232 - clerical or sales workers
- 240, 241, or 242 - craftsmen, operatives, or kindred workers
- 251 or 253 - service workers or laborers
- 261 - enlisted personnel in the Armed Forces

(2) Total income from above occupations (reported in S-I, item 6) equal to at least one-half of total family income before taxes (BLS 2646-D), item 23, col. (h), minus items 5 and 21, col. (f).

(3) At least one FM employed a total of 37 weeks or more in SY, regardless of occupation (S-I, item 4, and S-II, item 3).

Index family (or single)	1
Family eligible for index except no FM employed 37 weeks in SY	2
All other	3

21. Year of survey

Not reported	99

32. Make and series of automobiles

Cars owned by family during SY
classified by make and series.
From Sec. F-I, items 2, 3, and
5. Detailed codes attached as
Appendix B to Survey of Consumer
Expenditures, Washington Coding
and Editing Manual.

Make	2-digit
Series	2-digit

33. Housekeeping arrangement

If at least 1 FM regularly eats
at least 10 meals per week at
home or carried from home, code
as housekeeping. From Sec. J,
item 2.

Housekeeping during SY	1
Nonhousekeeping	2

34. Sharing families and families
with boarders

Family shared food expenses with
another family or had boarders.
From Sec. F-I and J, item 5.

No boarders or sharers 1

Families with boarders 2

Sharing families (including
sharing families with
boarders) 3

No entries in Sec. F-I, items 1
or 2, and "No" box checked in
Sec. J, item 5.

Entries in Sec. F-I, items 1 or
2. "Yes" box checked in
Sec. J, item 5, with or with-
out entries in Sec. F-I,
items 1 or 2.

CC35-41: Codes for weekly food diary - Schedule 2648-C

35. Sharing families and families
with boarders

Same as CC-34. From 2648-C,
page 2.

No boarders or sharers

1 No persons listed as boarders
in col. (a), lines 11-15; and
"No" box checked in item 1
(bottom of page 2).

Families with boarders

2 Persons listed as boarders in
col. (a), lines 11-16, or
other indication of boarders.
"Yes" box checked in item 1.

Sharing families (including
sharing families with boarders)

3

36. Housewife working

Housewife employed outside the
home; part-time or full-time.
From 2648-C, page 2, item 2.

Housewife not working

1 "No" box checked in item 2.

Housewife working full-time

2 "Yes" box checked in item 2 and
35 or more entered in "Hours."

Housewife working part-time

3 "Yes" box checked in item 2 and
less than 35 (or no entry)
in "Hours."

Housewife not present

4

37. Freezer or food locker

Use of home freezer or rented
food locker; large food pur-
chases for storage made in week
scheduled. From 2648-C,
page 2, item 3.

Had freezer or locker; made
large purchase

1 Both "Yes" boxes checked in
item 3.

Had freezer or locker; no
large purchase

2 "Yes" checked in first row of
boxes; "No" checked second
row of boxes.

No freezer or locker

3 "No" checked in first row of
boxes.

38. Completeness of Schedule 2648-C

Some food purchases reported; all
meals from family food supplies

1 Some entries in Sec. II, pages
4-13; entries in col. (g)
and no entries in cols. (h),
(i), (j), page 3.

Characteristic

Code

CC No.

38. Completeness of Schedule 2648-C (continued)

Some food purchases reported; some or all meals eaten away from home

2

Some entries in Sec. II, pages 4-13; entries in cols. (h), (i), (j), with or without entries in col. (g), page 2.

No food purchases reported; all meals from family food supplies

3

No entries in Sec. II, pages 4-13; entries in col. (g); and no entries in cols. (h), (i), (j), page 3.

No food purchases reported; some or all meals eaten away from home

4

No entries in Sec. II, pages 4-13; entries in cols. (h), (i), (j) with or without entries in col. (g), page 2.

39. Seasonal cooperation

To indicate whether families supplying weekly food purchase data at different seasons of the year have supplied data in previous surveys.

a. From original family supplying Schedule 2648-C in initial field survey--Mail survey response to:

First mailing (Oct., Nov., Dec.)

10

Second mailing, only (Jan.

Feb., Mar., June)

11

Third mailing, only (April, July, Aug., Sept.)

12

First and second mailing

13

First and third mailing

14

Second and third mailing

15

First, second and third mailing

16

b. From new family at CES address--Mail survey response to:

First mailing (Oct., Nov., Dec.)

20

Second mailing only (Jan., Feb., Mar., June)

21

Third mailing only (April, July, Aug., Sept.)

40. Tax area

1-digit

Survey areas classified accord-
ing to percent of sales tax
applicable to purchases report-
ed on Schedule C. Codes avail-
able in Appendix A, Washington
Coding and Editing Manual.

41. Household size

3-digit

Total number of meals eaten
at home or carried from home
during week by FM's, guests,
boarders, and paid help,
converted to week by dividing
by 21 meals per week.

a. Average household size

From Schedule C, Part I, page 2,
total line for 3 columns of (g)
÷ 21 and rounded to 1 decimal.

b. Household size class

Obtained by converting the
3-digit code for "Average
Household Size" (CC-41-a) to
a 1-digit code.

Less than 01.5 (10 to 30 meals) 1
01.5 to 02.4 (31 to 51 meals) 2
02.5 to 03.4 (52 to 72 meals) 3
03.5 to 04.4 (73 to 93 meals) 4
04.5 to 05.4 (94 to 114 meals) 5
05.5 and over (115 meals or more) 6

** Includes Alaska.

1/ Residing in RNF area, but operating farm(s) elsewhere.

Explanatory Notes: The Rural Nonfarm Universe outside SMSA's was distributed between ..
Farm Operator and Nonoperator Consumer Units (Table 2) as follows:

Operator consumer units sampled at 2.58 times
 nonoperator consumer units

Northeast

Farm operator consumer units (completed schedules)	4	$\frac{4}{2.58} = 1.55$
Nonoperator	248	
Total	252	

Operators $\frac{1.55}{248 + 1.55} = .0062$

Nonoperators $\frac{248}{249.55} = .9938$

RNF universe of consumer units

$1,279,276 \times .0062 = 7,932$
 $1,279,276 \times .9938 = 1,271,344$

North Central

Farm operator consumer units (completed schedules)	16	$\frac{16}{2.58} = 6.20$
Nonoperator	438	
Total	454	

Operators $\frac{6.20}{438 + 6.20} = .0140$

Nonoperators $\frac{438}{444.20} = .9860$

RNF universe of consumer units

$2,491,981 \times .0140 = 34,888$
 $2,491,981 \times .9860 = 2,457,093$

Explanatory Notes - Continued

Operator consumer units sampled at 2.58 times
nonoperator consumer units

SURVEY OF CONSUMER EXPENDITURES, 1960-61

CONSUMER EXPENDITURES & INCOME
List of Statistical Reports

MOST OUT OF
PRINT

The Bureau of Labor Statistics has issued a series of statistical reports summarizing the results of the Survey of Consumer Expenditures, 1960-61. This latest nationwide survey of expenditures and income of families living in urban and rural areas was conducted with the cooperation of the U.S. Department of Agriculture. The final reports present the data combined into four geographic regions and the United States for the total population and also separately for the urban, rural nonfarm, and rural farm populations. Three groups of tables are included in the final reports:

I. U.S. and regional summaries

Averages for major components of family accounts are classified by family income, family size, age of family head, occupation of the head, and housing tenure. Additional classifications by education of the head, race, family type, full-time earners, and location and size of place are presented in Supplement 1.

II. Cross-classification of family characteristics (Supplement 2)

Data for eight family characteristics in the above summaries are cross-classified (two variables) with each of the other characteristics listed below. Supplement 2 to each report contains 92 pages of tables and 2 pages of text.

1. Family size with income, age of head, family type, and location and size of place
2. Age of head with income, occupation of head, and tenure
3. Occupation of head with income, race, and tenure
4. Education of head with income, and occupation of head
5. Race with income, and tenure
6. Number of full-time earners with income
7. Tenure with income
8. Family type with income, and occupation of head

III. Detail of expenditures and income (Supplement 3)

These supplements present in detail the components of consumer expenditures and income which were summarized in the reports noted in (I) above. These detailed tabulations show consumer units cross-classified by family size and income after taxes and by family size and the location of the family's residence inside or outside Standard Metropolitan Statistical Areas. Supplement 3 to each report contains 154 pages of tables and 11 pages of text.

Advance Reports

Prior to publishing the U.S. and regional summaries, the Bureau issued similar reports and Supplement 1's covering the urban part of individual metropolitan areas (SMSA's) surveyed over the period, 1959-63. The 13 largest SMSA's that were surveyed for both 1960 and 1961, and for which 1961 data are

included in the 1960-61 report, are listed first below. The smaller SMSA's, which were in the sample for either 1960 or 1961, follow. The SMSA's in each group are listed alphabetically, and are not in serial order.¹

U.S. DEPARTMENT OF LABOR

BUREAU OF LABOR STATISTICS
WASHINGTON, D.C. 20212

DATE: August 31, 1978

SUBJECT: On the Comparison of Results Between the 1960-61 and 1972-73
Consumer Expenditure Surveys

The information in this paper permits the comparison of data at a more detailed level than shown in BLS Bulletin 1992. For additional information or clarification, contact George Weeden, Bureau of Labor Statistics, Room 3306, Bicentennial Building, Washington, D.C. (Telephone: 272-5156).

1

On Comparison of the Results Between the 1960-61
and 1972-73 Consumer Expenditure Surveys

One important use of the data in BLS Bulletin 1992 will be the comparison of spending patterns recorded by the 1972-73 CES with the patterns recorded by the 1960-61 CES. Table A presents, in detail, the adjustments necessary for the most precise comparison possible using published data.

The basic objective of table A is to relate an item or group of items from the 1960-61 CES, at the published Supplement 3 level of detail,^{1/} to a particular expenditure component from the 1972-73 CES, as published in Bulletin 1992. In many cases the conceptual comparability between components of the two surveys is direct. That is, published line items from both surveys are definitionally the same. However, because of differences in stub detail and in definitions between the two surveys, direct conceptual comparability cannot be achieved for a number of important expenditure components, particularly recreation. Thus, an additional comparison technique is utilized which requires grouping published 1972-73 items and comparing that group with a single item or group of items from the 1960-61 survey. From the above, it is apparent that neither the 1960-61 nor the 1972-73 stub structures are purely maintained in the appended comparison table.

Table A contains three columns of information. Column (1) contains a general description of the comparison category. Column (2) presents items published in the 1972-73 integrated tables, and

Column (3) presents items published in the 1960-61 Supplement 3 tables. For each item or group of items in column (2), a corresponding item or group of items appears in column (3). Two types of comparison situations are presented in Table A:

- (1) Direct correspondence. In this case, the published item is defined identically in both survey publications. An example is the item, food prepared at home.
- (2) Indirect correspondence. Three types of indirect correspondence may be found in the comparison table. All three situations involve comparing one or more items from one survey with two or more items from another survey. Also included here are situations in which items are adjusted for exclusions (i.e., items should be compared only after particular subparts have been netted out). The three types are exemplified as follows:
 - (a) The correspondence for the item, fuel oil and kerosene, published in the 1972-73 survey requires merging the separate 1960-61 Supplement 3 published line items for "fuel oil" and for "kerosene" in order to achieve correspondence.
 - (b) The reverse is the case for alcoholic beverages. In order to achieve comparability, the single published line item, alcoholic beverages, from the 1960-61 Supplement 3 tables,

must be related to the sum of two separate items, alcoholic beverages (under current consumption) and alcoholic beverages (under recreation), from the 1972-73 Bulletin 1992.

- (c) An example of the final type of indirect correspondence is the item, housing total, cited in column (1). Grouping the estimates for housing total, owned vacation home (under recreation) and lodging (under recreation) from the 1972-73 Bulletin 1992 yields an estimate conceptually comparable to the item, housing total, less the items, other real estate and laundry/dry cleaning sent out, from the 1960-61 Supplement 3 published tables.

The tables included in Bulletin 1992 enable direct expenditure comparison with 1960-61 estimates at the following levels of classification: Total United States; total U.S. urban; total U.S. rural; total U.S. urban or rural inside SMSA; total U.S. urban or rural outside SMSA; each of four regions and family size classes for the total United States. Users should note that the geographic boundaries (counties or groups of counties) for many SMSA's have changed between 1960-61 and 1972-73 and that no attempt was made to account for these changes in Table A.

For the level of precision described in Table A, the comparisons shown are the only ones which can be performed. Those wishing to make comparisons at the more aggregated 1960-61 Supplement 2 level of detail^{2/} may do so by referring to the description in Bulletin 1992. Users are warned, however, that the level of stub comparability presented in Bulletin 1992 for a number of categories is less precise than permitted by the table appended to this narrative.

1/ Reference is made to the Survey of Consumer Expenditures, 1960-61, BLS Report 237-93, Supplement 3-Part A. BLS Reports from the 1960-61 survey are out of print. However, they may be available at BLS regional offices or at larger public libraries.

2/ Op cit, Supplement 2.
